Machine-tool industry, basic in wartime, is in a far better position now, is spread out in relatively safe areas for the most part.

Other firms, less directly connected with war industry, may be just as vulnerable to attack if they are located in areas that could become strategic targets. As a result, they may be just as concerned with relocation plans. Moreover, secondary war industries, such as Germany's ball-bearing factories, may be considered key plants for bombing if they present a concentrated target.

To relocate plants for increased safety in wartime, however, owners still must base their choice of location on available power, transportation, markets, and labor, may not count on Federal money to overcome any increased costs.

Subsidies for decentralizing are not in sight. Even such strictly war industries as ordinance and aircraft firms may not expect financial aid from the Government in moving out of congested areas.

Policies may be shaped by Government to encourage such relocation, nevertheless. Defense planners are much disturbed, for example, about recent court rulings concerning f. o. b. prices, which they fear will result in centralization of industry around supply points. Military pressure probably will be on the side of efforts to get a change in that situation through action by Congress.

Self-Interest, in the long run, is expected to bring about the gradual relocation of United States factories. Location of new plants and equipment, now being built at the rate of about \$13,000,000,000 a year, could be a big element in the financial risk involved if war is in the offing. Pressure for safe locations, thus, may come from agencies lending money for long-range capital investments. The recent trend in decentralizing of firms is expected to continue in some industries and be guided by these new rules for choosing safe sites.

Official advice on relocating plants for security in the atomic age, as a result, is to apply to a large number of United States firms, is likely to be followed in many cases where new and expanded factories now are being planned.

Public Housing in St. Joseph, Mo.

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, September 11, 1951

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Record a statement which appeared in the St. Joseph Gazette of August 22, 1951, showing the decisive defeat of Federal public housing in that city.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Federal public housing was rejected by St. Joseph voters yesterday by a decisive vote which was almost 2 to 1 against the proposal.

Unofficial totals of the referendum election showed that 4,987 persons voted for housing and 9,288 voted against the ordinance which would have permitted construction of the project.

The increased interest in the issue during the past weeks was reflected in the 14,275 votes cast as the opponents rolled up a majority of 4,301 votes.

CARRIED ONLY FOUR PRECINCTS

The housing ordinance was doomed from the start of the balloting yesterday, as it ran consistently behind in almost all precincts. When the unofficial tallying was completed, the proposal was found to have carried in only 4 of the city's 63 precincts.

Party lines were ignored as the opponents of public housing rolled up their big majority. The seventh ward, for instance, always a Democratic stronghold, rejected the housing plan by a vote of 465 to 212. Almost all sections of the city, including areas which had been classified as slums and exclusive residential sections, voted against the proposal.

WOULD FORGET BITTERNESS

Mayor Stanley I. Dale, who led the fight to repeal the public housing ordinance which had been passed over his veto by the city council, said, "I am very pleased with the outcome of the election. I believe the votes cast have indicated in a truly democratic way that the people of St. Joseph are against socialistic trends and spendthrift programs.

"I believe this is a very encouraging sign for all America to follow. I think this was a very important issue to the citizens of St. Joseph and I want to thank very gratefully those who cast their ballots, whether for or against the ordinance, because their active participation is a sure guaranty of the survival of democracy.

"Let us forget all bitterness arising from this campaign and go forward to build a better St. Joseph in a democratic method."

Oil for Education Is Theft Slogan

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. TEAGUE. Mr. Speaker, we have seen many articles and editorials recently regarding the tidelands question. Under leave to extend my remarks in

the RECORD, I wish to include an editorial which appeared in August 28 issue of the Dallas Morning News which warns of the danger of turning our school systems over to a highly centralized government, should the tidelands be held by the Federal Government, and the revenue derived therefrom restricted to educational use. This would be the initial step of Federal aid to education.

OIL FOR EDUCATION IS THEFT SLOGAN

Senator LISTER HILL, of Alabama, and some other advocates of turning everything over to the Federal Government are pushing a bill that would give tidelands oil to the Federal Government, restricting it to educational use. It is a crafty move aimed at appealing to teachers and school patrons throughout the Nation other than those of the three States most directly affected—Texas, Louisiana, and California. In their arguments, they make no mention of the moral issues involved. They make no mention of the danger of turning the schools over to a highly centralized Federal Government—a Government that may be highly militarized over a long period to come.

While these advocates of the tidelands steal for the Federal Government are using the billions of dollars of anticipated revenue in their appeal to the people, their design far transcends the mere theft of the oil. They want a precedent, based on the paramount-rights theory, for further grabs and extension of Federal power.

It is very significant that Senator HILL, in a recent release arguing for his proposal, tries to make it appear that, if the States succeed in retaining their tidelands, the United States will lose all of the oil of the submerged continental shelf. The States are claiming only 3 miles, except Texas, which claims 10.5 miles under its annexation agreement. The claim of the Federal Government to the edge of the continental shelf extends more than a hundred miles. And the chances are that, even if the States win their fight, the Federal Government will get most of the oil from the submerged area—in fact, 90 percent or more of the oil.

But the fanatics for Federal power want the precedent established because they want progressively to grab the river beds and thereafter any other natural resources that might be claimed under paramount rights.

This is not merely a battle for oil money. It is an ideological battle. And on the side of those advocating the tidelands steal is the grandest piece of strategy for the advancement of socialistic government that has ever been concocted.

Celebration of Port of Baltimore Day

EXTENSION OF REMARKS OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. WHERRY. Mr. President, I ask unanimous consent that an address now being delivered by the junior Senator from Maryland [Mr. BUTLER] at a luncheon sponsored by the Propeller Club in celebration of the Port of Baltimore Day be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am proud to be here today to join in the celebration of Port of Baltimore Day. No one could live all his life in his native city with-

out feeling pride in its traditions and its institutions. The port of Baltimore has played a magnificent part in the history of the State of Maryland and the country.

From the docks and wharves of this great port, in time of peace, ships carry to the far-flung shores of every country in the globe a tremendous flow of commerce. In time of war, the facilities of this great port are turned to shipping munitions and other war materials to equip our fighting men.

Since I have been in the Senate, I have given close attention to every problem brought to me concerning the port. I will continue to keep a vigilant eye upon its progress. I had some small success recently in keeping the clinic in the Customs House open. I hope to see it expanded and will bend every effort to that end.

On Tuesday, August 21, the merchant marine bill was before the Senate and, realizing how important this measure is to our great port, I gave it my full support. I voted against several crippling amendments and was exceedingly pleased when the Senate finally passed the bill.

I consider the port doubly important today. There is a big fight going on in this country between communism and Americanism. It is a part of a greater battle between Godlessness and Christianity which is spreading all over the world. Now I have been drawn into that battle. As a matter of fact, I plunged into the senatorial campaign which resulted in my election with the avowed purpose of keeping the free State of Maryland clear of subversive influences and to fight for American liberty.

No doubt you have been hearing and reading about an investigation of my election by a subcommittee of the United States Senate. You have not heard the whole story, but that is no fault of yours.

During the public and secret sessions of this subcommittee more than 20 volumes of transcript were taken covering many thousands of words of testimony. Of course, the newspapers could not carry all of this complex story. Therefore, they picked out parts of it according to their individual judgment as to what makes news, because that is what sells newspapers. Newspapers are in the business to sell their product, and, therefore, you can't blame them for making it as attractive as possible.

Unfortunately, this practice failed in many instances to cover all of the facts. It also resulted in undue emphasis being given to parts of the testimony and the stating of conclusions wholly unfounded.

I therefore decided that after the furore and the tempest had subsided in Washington, and everyone had his say who wanted to, I would come back to my home town and tell my friends my side of the story. It's very simple, and I know you will understand it better this way than if I took the floor of the United States Senate and engaged in name calling and vituperative debate.

Here is where I was born. Here is where I grew up as a boy selling newspapers and doing odd jobs in the neighborhood.

Some of you are aware of the fact that when World War I broke out I enlisted immediately and served my country in France. After 26 months of service, I returned and worked my way through college, finally to obtain a law degree from the University of Maryland. I was 53 years old when I filed for the United States Senate, and for 23 years I had practiced law in my home town. I am married and have two fine boys and a lovely girl.

Many of you have been intimately connected with my private life, either through contact with my family or my profession. I know that if I were the kind of man some have been trying to paint with smears and insinuations, I would not be here today. If there were any doubt about my honesty and integrity, 326,291 voters in the State would

not have picked me over my opponent, Millard Tydings. I defeated Millard Tydings by a majority of 43,111.

Since then he has originated and directed a campaign against this overwhelming expression of public opinion which has been centered in an attempt to smear the voters of Maryland and my personal character. I can understand how he would be disturbed and upset over his defeat after serving so long in the Senate, but I have been dismayed and amazed at the extent of personal bitterness which he has expressed to mutual friends of ours.

I ask you to compare his attitude with my campaign against him. To this day, I have never made any personal reference to this man but have merely held up to the people of Maryland the oft-repeated criticism of his public record. You all know that I fight fair be it on the gridiron, in the courts, or in this field of politics which is brand new to me.

I told you at the opening that the investigation in Washington was a long-drawn-out affair. Besides the thousands of words of transcript, the pages after pages of exhibits and the investigators' reports, there has been considerable debate on the floor of the United States Senate. The report on this affair was 39 pages long.

Since it would be impossible for you to go into the matter in its entirety, I am going to sketch some points that I believe are important from the standpoint of a lawyer and a native Marylander.

First of all, the admitted crux of the whole situation lies in this paragraph of the Senate report on page 2. It says:

"Our answer, as respects JOHN MARSHALL BUTLER, is that the facts developed from the evidence before this subcommittee are not sufficient in our judgment to recommend the unseating of Senator BUTLER."

If this language seems to say to you that the Senate subcommittee which wrote it was sorry they couldn't find enough to unseat me, you can blame it on the fact that the Senate Rules and Administration Committee that adopted the report was controlled by the Truman administration—that the subcommittee which approved the report contained three Democrats and two Republicans. In that respect, I want to point out to you something about the statement that this was a nonpartisan report drawn up by two Democrats and two Republicans.

I know of no better way to explain this situation than to quote you what one of these Republicans who signed the report said about it on the floor of the Senate on Monday, August 20, when the report was officially submitted.

Senator HENDRICKSON, a Republican from New Jersey who served on the subcommittee, said (and it is carried on p. 10332 of the CONGRESSIONAL RECORD for Monday, August 20):

"Mr. President, the subcommittee found very clearly that the distinguished Senator from Maryland had not in any manner conducted himself so that he would disqualify himself for membership in this great body."

I am very proud to have been a member of a committee which has been able to do justice to an honest and fearless and courageous citizen, who was elected by the people of Maryland after an intensive and exhaustive campaign; and I commend the people of Maryland today for the judgment which they displayed in that campaign.

Now maybe you are puzzled as to why, if Senator HENDRICKSON feels that way about the people of Maryland in selecting me for the United States Senate, he signed a report which contained unfair criticism about my campaign and my conduct in it. Maybe some other things Senator HENDRICKSON said on the floor of the Senate will enlighten you. At one time he said:

"The Senator from New Jersey would like to go one step further with relation to the part Jon Jonkel played in the Maryland campaign. If Jon Jonkel had followed the law, this matter would not be before the Senate today.

"I freely confess on the floor of the Senate this afternoon that there are contained in the report words and phrases and even paragraphs with which I could have taken issue. However, in order to get the basic issue settled and in order to do justice to a man who was held in the balance so to speak for a long time, I refused to quibble over a word here or a phrase there. All too long did JOHN MARSHALL EUTLER stand in a position in which he must have wondered what his neighbors and friends were thinking of him. I felt, as did the junior Senator from Maine, that we had to get down to business and dispose of the whole question and to dispose of it with a spirit of justice which would make the people who love justice completely satisfied that the committee had been conscientious in its labors."

And if this is not a clear answer, I want to tell you that shortly after Senator HENDRICKSON made this public declaration on the floor of the Senate the other Republican member of the subcommittee, Senator SMITH of Maine, told me that she concurred in the views of the Senator from New Jersey.

Now as to the criticism in the report. Let me read to you another short paragraph in the report which may have escaped your attention. It is on page 6 of the report and is the opening paragraph of what the subcommittee called their observations, conclusions, and recommendations. It says:

"Much of the 1950 Maryland senatorial campaign was in the regular and traditional American political pattern. And like any vigorously fought election, it had good and bad features that stand out."

Thereupon the report set down all the bad features they could find or that Tydings charged were present. They had nothing to say about the good features. They didn't mention the many men and women of high character who supported my candidacy. They never mentioned anything good about me personally, except that I had a right to my seat in the United States Senate.

I don't blame them because as new as I am to politics I've found out that a committee directed to find out if there is something wrong doesn't look at the good side.

After reading these criticisms of my campaign carefully I began to question whether the things complained of had any dominant effect on the result of the election. I don't think they did.

I call your attention to the widely published and universally accepted analysis of the campaign made by Millard Tydings on November 17, 1950, a few short days after the people of Maryland had duly and legally expressed themselves at the polls. I want to read you this interview with Mr. Tydings. It was published in the United States News of November 17, 1950. I quote:

"What do you think was the basic reason for the outcome in your case, Senator?"

"The basic reason, in my judgment, was that the primary campaign for the governorship was so bitter that it demoralized the Democratic Party and brought on a situation that has no parallel in Maryland politics, where the party was split completely down the middle.

"The fact that I ran about 50,000 votes better than the Governor did is indicative of what I am trying to say, but the demoralization over the whole State was due to the gubernatorial primary, and that couldn't have been healed. I think that was the principal factor. Everybody was the victim of it, because even the attorney general, who would normally win by 100,000 or more, won by only about 20,000, and there was no real fight on that office in the sense that there was on the others. It affected everybody."

"To what extent was the result influenced by the fact that Senator McCARTHY jumped into your campaign?"

"I don't think that McCARTHY as a person did any damage, but I think the issue raised and the propaganda about it had some effect, but it would be secondary to what I have already told you."

"What about foreign policy and military policy?"

"That was too obscure to pass any sound seasoned judgment on it. It was in and out, but never a major issue. The worst thing of all was the demoralization of the party by the gubernatorial primary, where they fought each other so hard that both sides were exhausted and there was a lot of terrible bitterness."

Now, that interview was given when every detail of the campaign was fresh in the minds of all of us. In that interview it was readily admitted that the defeat of the Democratic Party in Maryland was due to a split in that party and that it extended to the gubernatorial race, the race for attorney general, and right down the line to the county officers.

You know the registered Democrats outnumber the Republicans in Maryland by at least 3 or 4 to 1 so there has to be a reason for a novice Republican candidate for the United States Senate to defeat a Democrat of long service and entrenched position by a majority of 43,000. The Republican victory of November 1950 was not confined alone to the senatorial race nor is there yet any charge made that any particular phase of the senatorial campaign had any effect on the miserable showing the Democratic Party made in the other races. On the contrary, the defeated senatorial candidate, in the interview above quoted blames his plight on forces outside his case and on the general record of his own party.

There was also another analysis made of this senatorial campaign by a person who cannot, by any stretch of the imagination, be said to be prejudiced in favor of the Republican Party or its candidates. It came from the pen of C. P. Ives, an editorial writer for the Baltimore Sun. Need I remind you of the unswerving political leanings of the Sun—the publicity bulwark of the Democratic Party? The article by Mr. Ives was printed in that newspaper November 13, 1950. I shall read it to you.

"Our own Millard Tydings is a very special case with a good deal of the flavor of pathos about him. No one who cheered his bravery (as this voter did) in the 1937 court-pack fight can believe any version of the grotesque yarns about a rush of leftism to the head in his latter years.

"What a very high percentage of the 285,000 Marylanders who went for Mr. BUTLER seem to have concluded about Mr. Tydings was that in a single, but determinative, episode he served the President, as Wolsey served Henry VIII, not wisely, and in the end not well. From that first historic television show of the Lattimore hearing, tens of thousands of these people seem to have had a dimming sense of levity and lack of inquisitiveness in the chairman."

These analyses are but two that were written along similar lines on or about that time. I will not weary you with the others because I believe these two coming from the mouth of the defeated candidate and a newspaper that champions his every move may be taken as the defeated man's own best explanation.

Therefore, I ask why this later attempt to put another face on the facts?

It may be argued that campaign matters now complained of were not known at the time these statements by Tydings and the Baltimore Sun were made. Do you believe that is true? Let's take a look at the facts.

First of all the most bitterly complained of piece of literature in the campaign was

a four-page circular entitled "From the Record."

How can anyone complain that this piece of literature was unknown to the defeated candidate or his personal mouthpiece, the Baltimore Sun, when they made their analyses of the election? The defeated candidate spoke long and lustily on the radio and television and issued statement after statement every day from the date of distribution of this circular to the date of the election. As for the Baltimore Sun, I venture to say that From the Record received more public attention from that newspaper and others than any other piece of literature used in any national campaign of the year 1950.

I wonder if the defeated candidate and Mr. Ives of the Sun discounted the effect this circular had on the voters because they knew every charge made in it—every piece of material—had been used before over and over again on the radio, in the newspapers, in speeches, or on the floor of Congress.

The whole tenor of this piece of literature was that the defeated candidate had been charged with whitewashing the investigation of communism in the State Department. Is there any doubt in the minds of anyone that the charge was made? Is there any doubt that it was repeated and repeated the length and breadth of this Nation? Is there any doubt that it is still being made now?

What is so strange about including it in campaign literature?

Can there be anything wrong in bringing out during a campaign that the public record of your opponent has been criticized day in and day out?

Obviously, the defeated candidate did not shy away from using current issues as material for his campaign. He charged the Republican Party with being responsible for the Korean war. Here's what he said about it time and time again.

"If we had done what the Republicans wanted in Korea there would not have been a gun out there."

Now, here you have the chairman of the Senate's Armed Services Committee, who is by rank and title bearing responsibility along with the President of the United States and the Secretary of State, for the policy of our country in relation to our armed intervention on foreign shores, charging the flops and failures of policy to the Republican minority in a Congress controlled by the Democrats.

When the people of Maryland put the responsibility where it belonged, this defeated candidate shouted "Foul." Everybody—in and out of Maryland—knows the truth of the matter and I am not going to dwell on that point any further.

So, I move on to the great composite-picture issue.

I don't know what difference it makes, at this late date, but just for the official record I tell you here and now that I did not know anything about this picture until I saw a printed copy of the circular From the Record.

The only previous knowledge of the circular I had was a brief notice that someone, somewhere, was planning to distribute a four-page newspaper containing direct quotations from the records of the United States Senate concerning the failure of the Tydings subcommittee to do its job of investigating communism in the State Department. When I saw it, my judgment was and still is, "let the people evaluate it."

But to resume, as to the Browder-Tydings picture, I never knew the whole pamphlet was even out of the planning stage until a copy of the completed product was put in my hands.

However, I have been informed and have every reason to believe that the composite picture was merely designed to illustrate the attitude displayed by Tydings toward Communist Earl Browder when the latter appeared before the Tydings subcommittee

and was questioned by the defeated candidate who was then chairman of the subcommittee investigating communism in the State Department.

If you are not familiar with this record, I urge you to read that testimony by Mr. Browder and then you can decide for yourself whether the composite picture, which was in reality a poor excuse for a cartoon, did accurately portray that incident.

Now, here are the facts. Browder did appear before the subcommittee. The defeated candidate, as chairman, did question Browder and did thank him most warmly for his testimony. Whatever else you read into that picture is a matter of imagination.

However, no mention of this picture, well advertised as it was, was made in the defeated candidate's own explanation of his failure, until long after the campaign was over. Again, I ask you why? What changed his mind, if in sober judgment it has been changed? What happened between the time he first spoke and his later utterances?

I can understand you could be puzzled, for, as close as I am to the matter, I have been shocked and amazed at this turn of events.

Now, we have heard a great deal about the manner in which funds were handled in the campaign. First of all, let it be clearly understood by those who are not aware of such things that I did not personally disburse any funds.

It was not my job. I was the candidate. I had a treasurer.

I can truthfully say, for my own campaign, that I endorsed some checks. I don't know how many or in what amount. I was confident at the time that they were being carefully handled through the treasurer in full accordance with the election laws. I know that no check I endorsed was handled otherwise.

Secondly, I was involved involuntarily in the matter of the \$18,000 bill owed William Fedder for printing. I did not know until I was told by Mr. Fedder in a telephone conversation at 2 o'clock in the morning of November 2, that any such bill existed. I did not know that a Mr. William Fedder existed before that time, much less that I owed him money. I was distraught at the thought that such a bill had been run up.

However, I told Mr. Fedder that, if it was true that others using my name had induced him to do work for which he now thought he was not going to be paid, I would personally guarantee him against loss. I pay my debts. I never seek a way out.

I felt that although I had not made or authorized any such advance commitment to Mr. Fedder, it was up to me to see that he did not suffer even if it took my last cent. I told him so and I followed it up with a letter.

And, I want to tell you that as a lawyer I know there was no violation of any law involved. I had a perfect right to make such an offer under the very language of the Corrupt Practices Act which exempts such printing bills.

And, I think that if a man's effort to be honest is to be twisted around to look as if he was violating a United States statute, the statute ought to be changed or we ought to get rid of the people who are interpreting it in such a manner.

Now it has been established that one closely associated with my campaign committee was guilty of violations of the Maryland Corrupt Practices Act in the handling of certain funds used in the campaign. In this regard, I want to make you this assertion:

Every cent of the money involved was used for the legitimate purposes of buying radio time, printing circulars, and running the office. Not one scintilla of evidence has been produced that it was used otherwise. I am

confident nobody can produce any such, because I am confident there is no such.

The only charge was that the rules on reporting campaign funds were not carried out. In other words, the charges on which Jon M. Jonkel was convicted and fined in no way changed the course of the campaign or the result of the election and in no wise involved moral turpitude.

If receipt of the money have been otherwise recorded, it still would have been used for the same purpose and the result would not have been changed one iota.

Let us pass on to another phase of the Maryland campaign, the matter of outside influences.

After considerable study of the subject, I am of the opinion that it is really not so much a question of whether it is proper for persons from outside a State to contribute funds in a national election, or for persons from outside a State to come in to make speeches.

It is rather a question of who gets the money and who does the speech making.

I have heard of bitter denunciation because a Republican Senator came into Maryland and made two speeches for me. I don't recall that anything was said about the fact that President Truman came to Maryland before the party primaries got under way and spoke up for the candidate I defeated. I don't recall any mention of the fact that the Democratic National Committee contributed \$5,000 to the defeated candidate's campaign and that \$2,500 was contributed by the Democratic Senatorial Committee.

If these so-called outside influences are to be stopped, are we to do away with the two-party system? Are we to abolish both national committees?

Are we to stop the President of the United States from making swings around the country to speak for local candidates at whistle stops or metropolitan areas?

Of course, such steps would be ridiculous, but I believe some definite effort should be made to stop hand-picked Truman Democrats from selling Federal jobs in Mississippi, stealing ballots, and peddling RFC loans.

One other point I would like to clear up before I close. During the long months while my right to a seat in the United States Senate has been under fire I refrained from entering into name calling or mud slinging. I do not intend to lower myself to that level today. However, because I did not answer the jibes of some columnists, radio commentators, and others who wish to prolong this fight, it has been charged even in the United States Senate report that I have never made any answer to the charges. This is not true.

I was the first person to appear before the Senate subcommittee when it opened its public hearings February 20. I asked the subcommittee to allow me the right of every accused American. I asked that I might be given a specification of the charges against me and counsel so that I could defend myself. I was denied these rights. In that appeal to the subcommittee I did give a full accounting of my campaign. Here is what I said:

"I have no personal knowledge of any violation of the Federal Corrupt Practices Act. I fled, and my treasurer has fled, complete statements which I believe were a full compliance with that statute. I have never run for an elective office before, and I do not claim to be an expert in political procedures. In my campaign there were many citizens who volunteered to assist me, a large number of whom had had no prior experience in politics. Since my victory I have learned that many people unknown to me at the time of the campaign were working independently to assist me.

"It is thus impossible for me to state that the investigators of this committee may not

have found some technical violations, as indeed I suspect could be found in a 3 months' investigation of any political campaign. But I can state wholeheartedly and without any qualification whatsoever that I never knowingly have violated a single provision of any statute, and that if any of my supporters have done so, any such violations were technical in character and relatively trivial, and due to inexperience and not to intention.

"There is no suggestion that the total amount of my expenditures was excessive compared to expenditures in other senatorial campaigns. It will also be found that they were well within the limits of either State or Federal statutes."

I don't know how I could have been more plain.

I hope I have given you all the information that you desired about the election. The report of the Senate committee should mark the end of unjustified and unreasonable attacks on me by Tydings or others on his behalf.

There can, however, be no assurance on this point, but with a better understanding of the facts, you will better appreciate the nature and the motive behind any such attempts. Perhaps it was only natural for a poor loser to seek an alibi.

I call your attention to this thought which I am going to leave with you in closing. I am, as you know, a freshman Senator, new in politics, but I have been advised by veteran Members of the Senate and many persons in Maryland, that if Mr. Millard Tydings had conducted a full and satisfactory investigation of communism in the State Department, he would still be the senior Senator from Maryland today. In that case, I would be practicing law and perhaps a lot happier individual.

I am inclined to agree with that theory. The fact that clinched the argument for me is that the same investigation that Tydings was supposed to conduct but didn't, is now being done over by another Senate committee. It is a Subcommittee on Internal Security. It is headed by Senator Pat McCarran, a Democrat from Nevada, who is also chairman of the Senate Judiciary Committee. The decision to have the job done over was made by a Democratic-controlled Senate. The progress reports from this new Senate committee put an entirely new light on some of the conclusions of the subcommittee headed by Mr. Tydings.

This country, like every other country attacked by communism, will stand or fall on its internal security. I am certain this is one of the most important issues of the day and I intend to use every effort at my command to wipe out any weaknesses in our Government this committee reveals.

I thank you for this opportunity to tell the people in my home town what I stand for. I am ready, as always, to meet the issue anywhere, but I am doubly proud that I can safely place my fate in the hands of the people of my own State.

Dedication of New General Accounting Office Building

EXTENSION OF REMARKS

OF

HON. WILLIS SMITH

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. SMITH of North Carolina. Mr. President, yesterday at the laying of the cornerstone of the new General Account-

ing Office Building, the Comptroller General of the United States, Hon. Lindsay C. Warren, a distinguished North Carolinian, with many years of service in the Congress, made an address with respect to the General Accounting Office and its part in the governmental functions of the Nation's activities.

In this address, among other things, he pointed out some very interesting facts as to personnel employment, and how he had reduced the number of employees from a peak in April 1946 of 14,904 to 6,899 on July 31, 1951, a reduction of 8,005 employees in the last 5 years.

This is such a refreshing statement by a man who believes in efficiency in Government that I think it should be published in the RECORD for all to read, and many, I hope, to emulate. I therefore ask consent that the statement be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies, and gentlemen, the General Accounting Office and its employees are deeply grateful for this splendid new building. It is the product of a great engineer, Mr. W. E. Reynolds, and his able staff; and a master builder, Mr. John McShain, and his workmen. Its dignified exterior and public reaches leave an impression of strength and soundness. Its functional work areas incorporate the advances of modern science. Ample provision has been made for the convenience and physical comfort of our people. While its construction entailed considerable cost, it is reassuring to know that the collections of the General Accounting Office during any 5 months would pay that cost. We are all expecting great dividends in terms of better management and morale from this first gathering under one roof of all of our Washington activities.

It was 30 years ago this summer that the Budget and Accounting Act of 1921 was passed. The title "General Accounting Office" was assigned to the office then created, but the genealogy of the Office is clearly traceable back to the very beginning of our Government. The story of its development is an interesting and important part of Federal financial history.

From the days of our early colonists up to the year 1921, the function of auditing Government expenditures took many forms and was administered in many different ways. But with the enactment of the Budget and Accounting Act there was brought into existence an audit and investigative agency in the legislative branch of the Government with real enforcement powers. Legislative control over financial matters was greatly strengthened. For the first time Congress had the means to secure necessary information concerning the financial transactions of our Government from a completely nonpolitical agent, independently of the executive branch.

As could be expected, that independence has not gone unchallenged. In the 30 years since 1921, there have been several abortive efforts to destroy the Office. They have come not only from within the Government, but from the outside. Even some of your predecessors, Mr. President, have made the attempt. Their plans were rejected by the Congress. As late as last year, an ill-conceived attack was launched from outside the Government. The action of the Congress in repelling this last assault speaks for itself, for not a single vote, nor a single voice, was mustered in support of the proposal in either the Senate or the House of Representatives.

The General Accounting Office has emerged from this experience with new stature and increased importance as an agent of the Congress. Yet, neither the Congress nor the Office can afford to relax its vigilance. The controls placed by Congress on the expenditure of funds in the exercise of its constitutional power over the purse and the enforcement of those controls by the General Accounting Office are integral parts of our system of checks and balances. It would be naive to think that there will never be another attempt, motivated by dislike of restraint or adherence to discarded theories, to water down legislative control of public funds or weaken the General Accounting Office. Both the Congress and the Office must keep ever alert to guard against any such eventualities with all the strength at our command.

I would not paint the picture too dark. The Congress has displayed most heartening confidence in us over the years. But we in the General Accounting Office must always bear foremost in our minds that the support and backing of the Congress and of the citizens of our country must be earned and deserved. Our job, as in the case of any organization, whether in private business or the Government, is a continuing one. Let us never forget that no organization exists for long at a standstill or as a matter of right. The General Accounting Office was established to meet particular needs of our democratic form of government and we must serve those needs with constant vigor and with continual awareness of ever-changing conditions.

The very nature of the duties of the General Accounting Office and its status in Government as an agent of the Congress, independent of the executive branch, make it of paramount importance that we do our job with unassailable integrity. Our actions must be based on fact and fact alone. Our conclusions must be fair. We must execute our duties in a forthright manner without consideration of partisan factors and without fear of recrimination from any source whatsoever. Should the work of the General Accounting Office ever fail to follow any one of those principles, then the value of the Office will be lost.

It is essential that the General Accounting Office not only cooperate with the executive branch in its field of operations, but also lead the way to achieve those improvements that will result in better government. There are some of you from the executive branch here today who not too many years ago would have said, "That is not possible." I think you will now agree with me that it is not only possible, but has been done and is continuing to be done with increasing tempo.

A prime example is the joint accounting program which was inaugurated in December 1947 by the Secretary of the Treasury; the then Director, Bureau of the Budget, James E. Webb, and myself. This program has had the undeviating support of the President from its very inception. It is a partnership with the three partners cooperating 100 percent and having one common goal—the improvement of accounting, budgeting, financial reporting, and auditing in the Government. I gladly pay public tribute to Secretary of the Treasury Snyder and Director of the Budget Lawton. As a result of this program and of legislation enacted by the Congress, culminating in the Budget and Accounting Procedures Act of 1950 and the Post Office Department Financial Control Act of 1950, accounting improvements are going forward with rapid acceleration on a Government-wide basis. The primary objective of this great program is full disclosure of public funds—full disclosure for the benefit of the President, for the benefit of the Congress, and full disclosure, if you

please, for the benefit and information of the American taxpayer.

The General Accounting Office which takes up its quarters in this building is a far cry from the office which I first knew as Comptroller General in November 1940. With all modesty, I want to say that I think the Office has done an outstanding job over the years. There was the audit of billions of dollars in expenditures during the emergency and war years, as well as the many other related duties such as the settlement of several millions of claims, the rendering of thousands of decisions on the legality of expenditures, the continuous investigations and inspections, and the rendering of assistance to Congress and its committees on legislative and investigative matters and to the agencies on fiscal and accounting problems.

Since the termination of hostilities of World War II, new duties have been given to us by the Congress and new activities and approaches have been inaugurated to enable us better to perform our primary functions. The Government Corporation Control Act, enacted in 1945, requires the General Accounting Office to audit annually all Government corporations. This means an annual audit of about 65 Government corporations, whose financial transactions run into billions of dollars. The Federal Property Act of 1949 requires the GAO to audit all types of property accounts and transactions and to prescribe principles and assist in developing systems of accounting for property. Our part in the joint accounting program, which I mentioned a few moments ago, is a tremendous task. We are successfully developing comprehensive, on-the-site audits which bring about broader coverage, more effective results, less paper work, and reduced flow of documents into Washington. All are major undertakings and are of real importance to the Congress and the taxpayer. Our country is now in the throes of another defense effort. The resultant expansion of Government organization and expenditures has placed a direct and serious responsibility on the Office.

Work done can only be measured by results. On this score, I think the record of the General Accounting Office measures up. In the last 10 years, we have not only paid our way, but we have made a substantial contribution each year to the Treasury. Collections from 1941 through June 30 of this year total over \$740,000,000. This money had been illegally or otherwise improperly paid out, and it is a fair statement to say that little of it would have ever been recovered except for the General Accounting Office. We have found it possible to reduce employees. In April 1946 the number of employees reached a peak of 14,904. There were 6,899 employees on July 31 of this year, a reduction of 8,005 in the last 5 years, of whom 779 were transferred to the Post Office Department. This has been accomplished through constant surveys of our work and the elimination of procedures which serve no useful purpose under present conditions. The revised procedures which we have placed in effect are enabling the General Accounting Office and the Government as a whole to do a more competent job at less cost.

I would like to tell you my conception of the mission of the General Accounting Office and the way in which that mission should be performed. I believe the Office must see to it that the will of Congress is given effect in the Government's financial transactions. I believe it must make full use of the resources at its command, growing out of its audit, accounting, and investigative activities, to fearlessly expose the facts, not as a carping critic, but in a constructive spirit. I believe it must constantly strive to bring to light waste and extravagance in the Government's operations and insist that those who spend the Government's money be

guided by the principle that it is not their money, but money taken involuntarily for public purposes and impressed with a public trust. I believe the Office must continue to cooperate wholeheartedly with both the Congress and the executive branch toward improved and informed governmental administration. I believe we must remain young in our outlook, adaptable in our methods, and firm in our objectives. If we faithfully adhere to this pattern, I have no doubt as to our place in the great structure of our Government.

Effect on School-Construction Program of Limitations on Steel

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. BUTLER of Nebraska. Mr. President, on last Friday, September 7, there was some discussion on the floor of the Senate regarding the proposal to ship 3,000,000 tons of steel to England during the coming year, and regarding the effect of present limitations on the use of steel on road-construction and school-building programs.

I have been very much concerned about this problem for sometime. On the day before the discussion occurred on the floor, I addressed a letter to Mr. Manly Fleischmann, Administrator of the National Production Authority, calling his attention to the disastrous effect on the school-construction program of present limitations on steel. Although I have not yet received a reply to my letter, I believe it may be of interest to other Members of the Senate, and I therefore ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON INTERIOR AND
INSULAR AFFAIRS,
September 6, 1951.

MR. MANLY FLEISCHMANN,
Administrator, National Production
Authority.

My DEAR MR. FLEISCHMANN: During the last few months, I have become more and more concerned about the disastrous limitations on new school construction which will apparently result from restrictions planned by the Federal Government on the use of steel for that purpose.

Preliminary indications are that we shall have a record number of children in elementary and secondary schools this fall—about 800,000 more than last year. Next year, it is estimated the number will rise by another 800,000, and there is no reason to think that this steady increase will stop for some years to come.

There are some of us who think that education is at least as important as military preparedness in the long-time preservation of our way of life.

These additional children will have to be educated somewhere. Existing schools are already bulging. We cannot double-deck the children. The only solution is to build more schools.

I have received any number of questions and complaints from various school districts

in Nebraska, regarding the serious situation they will face if they are not allowed to proceed with their plans, because of the rigid quota on the use of steel for school construction. It is my understanding that a total of only 196,000 tons of steel of all types is needed each quarter for this purpose, but the allocation of steel to schools, colleges, and libraries for the coming fourth quarter of this year has been restricted to approximately 104,000 tons. That is another way of saying that nearly one-half of the schools which should be built will not be built.

I further understand that this extreme shortage in the supply of steel available for civilian purposes is expected to continue for at least 1 year. If that occurs, it will throw the whole school construction program so far behind schedule that I don't know whether we will ever catch up, particularly since there is no guaranty that ample steel will be available at the end of the year.

The additional steel needed for the coming quarter would represent about four-tenths of 1 percent of the estimated supply. I realize that the steel shortage is unusually acute with respect to certain particular types of steel, such as structural steel. However, most school construction plans have been revised so as to hold the use of structural steel to a minimum.

We have been told that the cold war might last 5 or 10 years. It is not pleasant to think of the possibility that our educational system might have to labor under greater and greater difficulties year after year. The children are growing up and their education cannot wait. Very frankly, I believe that education should have a priority right next to military needs. It is hard for me to believe that we are in such a crisis that we cannot educate the children properly. When we speak of necessary sacrifices, I had supposed we were thinking in terms of sacrificing luxuries and comforts, not the educational, cultural, and moral training of the coming generation.

I would appreciate learning from you how you feel this situation can be handled. I have no desire to make your task more difficult, and I realize what a job you have in allocating the available steel supply among the various requirements. Not all needs, however, are equally essential, and I believe there is a time when first things must be put first.

Sincerely yours,

HUGH BUTLER,
United States Senator, Nebraska.

Value of Soil Conservation Districts

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. MAYBANK. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement by Mr. T. W. Thornhill, a trustee of Clemson College, in connection with the recent visit of the Secretary of Agriculture to inspect the soil conservation districts of certain sections of North Carolina and South Carolina.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

There are times when we may feel that democracy is losing ground in the United States, when we may think that bureaucra-

cy and big government are supplanting local leadership and initiative.

A sure cure for that gloomy feeling is to study the work being done by our farmers through their locally organized and locally controlled soil conservation districts. It will reassure you that democracy, individual initiative, and individual freedom and acceptance of responsibility are alive and—yes—thriving. I believe I can say without successful challenge that our farm people, as a whole, have been throughout our history our most independent and our most vigilant group in maintaining the freedom and rights of individuals. I believe that this is true also today.

I would cite you to my own State, South Carolina, which is solidly covered by farmer-organized soil conservation districts, and has been since 1943. My friend, T. W. Thornhill, Charleston businessman, civic leader, farmer, district supervisor, and a leader in the South Carolina Association of Soil Conservation District Supervisors, helped me to gather this information.

In these districts, created under authority of State law, farmers develop and carry out their own programs to solve their soil and water conservation problems. Of course, they use the facilities and services available from local, State, and Federal agencies, but this help is channeled through a program designed by the farmers themselves. For example, full-time technical help is provided through the districts to farmers by the United States Soil Conservation Service. PMA-ACP funds are used to help defray the cost of conservation work, and, through a recent order by the Secretary of Agriculture, soil conservation district supervisors will have an even greater share in the responsibility for shaping and carrying out a unified soil and water conservation program. The Clemson College Extension Service and vocational agriculture teachers help with the conservation education program. The State Forest Commission supplies much of the tree planting material used to return to forests those lands which should never have been cleared. The Farmers Home Administration urges all its clients to work out whole-farm conservation plans with the districts. Those are only a few examples of the types of help made available through the districts.

All of this, please remember, is under the local leadership of the farmers who serve as district supervisors. And, I understand, that the farmers are accepting an even greater responsibility for the operation and management of their districts. Our South Carolina General Assembly recently passed, and Governor Byrnes signed, an amendment to the State Soil Conservation District Law setting up a State soil conservation committee composed of district supervisors to administer the law. In the past, the committee has been composed of agency heads serving by virtue of other positions held by them. I feel that this change is in no wise a reflection on the agency heads formerly members of the State committee. It is simply another important bit of evidence that farmers are willing to accept full responsibility for the leadership of their soil and water conservation program.

Before we look inside a few of the South Carolina soil conservation districts, to see how local leadership carries out the local program, let's consider some of the area-wide and even interstate activities of district supervisors.

Supervisors in districts within the Savannah River watershed, both in South Carolina and in Georgia, have banded themselves together in an association to see that any watershed development and flood-control program worked out for that river basin is practical and in keeping with the wishes and needs of the local people. Any kind of basin development and watershed flood-con-

trol program worked out for the Savannah will affect the land on every farm in the watershed. Therefore, the district supervisors of both South Carolina and Georgia want to be dead certain that any program planned will be the kind of program the landowners need. And, here, I should like to emphasize that flood, erosion, and drainage problems cross boundary lines of farms, counties, and even States.

Within South Carolina, another group of district supervisors banded themselves together to help solve the land use and water management problems along the coast. With the help of supervisors of coastal districts in North Carolina, Georgia, and Florida, they sponsored the location of a Soil Conservation Service Experiment Station at Fleming, Ga., for the scientific study of those problems. It was my privilege to help the district supervisors get what Chief H. H. Bennett, of the Soil Conservation Service, has called the world's first drainage experiment station.

Along the coast, from Virginia to Florida, lies an area of land with enormous potentialities for development. Under the guidance of soil conservation districts, manned as they are by local people who know the situation best, great sums of money will not be spent unwisely in premature development, or in efforts to develop land not suited for agricultural purposes. You can be assured that this orderly development will provide for our great wildlife resources, and perhaps supply even greater quantities of desirable foods for waterfowl and other game. Management of land and water for waterfowl is one of the problems which I understand will be studied at Fleming, Ga.

And I feel that the time is ripe for the orderly, scientific development of these idle or little used coastal lands. Aside from our needs for food and other crops during the present emergency, we have a growing industrial population in South Carolina and adjoining States that will benefit from new and nearby sources of foods. Further, dependable sources of electric power and raw materials will encourage location of new industrial processing and manufacturing plants.

For example, the Santee-Cooper development and the proposed further expansion of this development to divert water from the Cooper to Back River will provide an increased market for agricultural products and put an increased demand on our crop and pasture lands to meet the needs for people employed in industry. Likewise, great quantities of quality foods will be required by people working at the atomic energy project on the Savannah River near Aiken.

Wise land use, sound water management methods, and development of idle and little used lands are vital, therefore, to the owners, to industrial workers, to industry itself, and to business and transportation—extremely vital, in fact, to our Nation and to the cause of freedom-loving people everywhere.

How is this responsibility being met within the individual districts?

District supervisors, elected or chosen by their neighbors and serving without pay except the satisfaction of performing well a service to all people, look to community and neighborhood leaders to spark the soil- and water-conservation program, and to the individual farmers to do the work voluntarily when provided the necessary technical help. When farm people are given correct information about land use and treatment, they will make wise decisions—and take appropriate action.

We all know that every farm community has its own leaders—men and women in whom the others have confidence and whose advice and guidance they seek. We also recognize that people accomplish most when they work together, whether the goal is better schools, better churches, better roads, or better farming methods. Working together

is an especially cherished rural tradition. It is a tradition handed down by our forefathers who worked together in log rollings, corn huskings, and barn raisings.

For those reasons, district supervisors encourage what they call "group action in conservation." That saves much time and travel expense for the Soil Conservation Service technicians. Conservation education and preliminary farm-planning work can be done as effectively with a group as with an individual. On the other hand, the final job of helping a farmer plan a complete farm soil- and water-conservation program must, of course, be done right on the land with each owner.

Group work is especially desirable and essential in solving drainage problems. Frequently the water drained from one farm must cross several other farms to reach a good outlet. Neighbors working together make this possible.

Mrs. O. M. Dotson and J. B. Mims, of the Lower Edisto Soil Conservation District near Harleyville worked together on such a project. Trained technicians of the Soil Conservation Service assigned to the district made preliminary surveys of the job and gave the landowners a cost estimate. Water from Mrs. Dotson's farm had to cross Mr. Mims' farm to find a good outlet. The landowners reached a financial agreement, and obtained help from the PMA-ACP at the rate of 12 cents per cubic yard of dirt moved.

Equipment owned and operated by the district dug a total of 3 miles of canals at a reasonable cost. The canals benefit 724 acres, including some very poorly drained land then idle. All the land drained is now ready for application of other soil and water conservation measures provided for in whole-farm plans with the district.

In order to encourage other landowners in the district to work together, the district supervisors sponsored a field day on the farms of Mrs. Dotson and Mr. Mims. Veterans' class members and other local farmers attended. Since that time, six group jobs have been undertaken in the district, and four of them already are completed. Four other group projects, involving 20 farms, are now in various stages of planning.

Perhaps the State's outstanding example of group work in soil conservation is in the Piedmont section, in Midway community of the Cherokee Soil Conservation District. That was the home community of the late E. C. McArthur, a district supervisor who was a founder of the South Carolina Association of Soil Conservation District Supervisors and later of the National Association of Soil Conservation Districts that now includes more than 2,300 districts through the Nation. He served as the first president of each group.

Group work in the Midway community under the leadership of Mr. McArthur, C. F. Swofford, M. B. Salmon, and others, prompted the Spartanburg Herald-Journal to sponsor a community soil conservation contest in cooperation with the districts.

In this one community, each of 81 farmers have a complete soil and water conservation plan with the district, and a high percentage of the planned measures can be seen on the land.

I'm told that you can drive at a moderate rate of speed for about 3 or 4 hours on the numerous improved roads in the 9 square miles within Midway community and never be out of sight of less than six of the many different soil and water conservation practices coordinated into complete programs. I'm told that you can stand at a county and farm road intersection on the Billie Hatcher farm and see, without moving or turning around, 18 different conservation measures established on the land. Visitors from many States and several foreign countries have seen and praised the cooperative conservation work of the Midway farmers.

The increased yields, reduced cost of production, and other benefits exceed many times the cash and work put out in applying the measures of whole-farm plans, according to C. F. Swofford, local leader and a supervisor of the Cherokee district.

"My own yields have increased from 30 to 35 percent since we started a conservation plan," Mr. Swofford says.

And the Cherokee district has 10 other similar community groups, with a total of 287 farmer members.

I could not complete this report without emphasizing that soil-conservation districts are giving equal assistance to Negro farmers, who also like to work in groups to save and build their land.

Here is an outstanding example of Negroes working together in the Berkeley Soil Conservation District:

The Smithville section of Berkeley County is one of the county's poorest drained farming sections. It lies between two large bays which do not have sufficient outlets. Water accumulating in the bays seeps through the farming area in between. Excess water does not drain off due to lack of outlets; it just evaporates. On 31 farms, covering 1,800 acres in this area, the owners cultivated the few high ridges to grow cotton, corn, sweet potatoes, and a little tobacco. Most of them had to seek employment in logging and pulpwood operations and in other work.

A Negro minister, Rev. W. M. Warley, who also farms in this section, learned about the assistance available through the district. He called a meeting of his neighbor farmers to hear from a Soil Conservation Service technician a full explanation of the help available. The group voted 100 percent to participate putting in a drainage system and using the necessary conservation measures on their lands.

Under the leadership of Reverend Warley, the group agreed to assign all PMA-ACP payments to the construction of a community drainage system. These payments will cover about 60 percent of the total cost, based on preliminary engineering surveys prepared by the SCS. The remaining 40 percent was raised in cash by voluntary assessments (based on benefits) to all 31 farms involved. The final engineering surveys were completed by the SCS, and the farm group was receiving bids for the construction in late April.

This drainage work will greatly benefit all present open land by lowering the water table about 3 feet. It also will open up 1,000 acres of potentially productive land suitable for a wide variety of row crops or pasture—land which has never produced crops. The drainage system will permit diversification and the establishment of conservation practices. The newly available cultivated land will enable each farmer to earn his living from his land. Health conditions as a result of standing water have been poor in this section, with a high rate of malaria. Drainage will largely eliminate this hazard. Road conditions also will be improved.

All these 31 farmers needed was the help given them by the district. They are doing the rest of the job under their own leadership and initiative.

I am told that in many instances, white and colored farmers, working with soil-conservation districts, have done group drainage work. An example is a group-drainage job by five white and two colored farmers in the Williamsburg Soil Conservation District, near Kingstree.

Countless other examples could be cited of the leadership of local farm people in the soil-conservation-district movement of South Carolina. The evidence is clear, convincing, and inspiring. Soil-conservation districts are helping to keep democracy, individual initiative, and local leadership living realities.

The Contest Against Communism

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter under date of August 29, 1951, addressed to the President by Maurice Tishman, a member of the American Legion, dealing with the duty of American citizens in the present contest with communism.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 29, 1951.

Hon. HARRY S. TRUMAN,
President of the United States,
Washington, D. C.

MY DEAR MR. PRESIDENT: As a loyal American and an ex-soldier of World War I, having served my country overseas (Company 168, Infantry) of the Forty-second (Rainbow) Division, and having seen front-line action at the Battle of St. Mihiel, from which action I was returned to this country as a war casualty, I believe I have earned the privilege of presenting to you my own interpretation of those constitutional rights you discussed in your address before the American Legion in Washington, on August 15, although as an individual I hesitated answering this address.

I am a past president and present chairman of the board of trustees of the Maiden Lane Historical Society, and I am a member of the American Legion, Victor Murtha Post, No. 972, Long Beach, N. Y., and in your address you quoted parts of the beautiful preamble to our Legion's constitution which pledges its members to "uphold and defend the Constitution, perpetuate a 100 percent Americanism, and to transmit to posterity the principles of justice, freedom, and democracy."

For 52 of the 64 years of my life, these are the ideals I have cherished in my heart. For these ideals I have worked and striven and seen countless millions of my fellow Americans sacrifice their lives. During this period America has gone through four wars: The Spanish-American War, World War I, World War II, and now we are in the Korean conflict, again sending our boys thousands of miles overseas to keep communism, in one of its open bids for power, away from our democratic shores.

If as it now appears we have contained communism in Korea in its open bid for power, we have done little to protect ourselves from the Communist's hidden bid for power here at home. This is Stalin's main line of attack, his central front along which the Reds never sleep, a perfected and damnable technique by which the Communists, without risking a single Russian soldier, seek by secret and underground methods to undermine and weaken the democratic structure of the West until it collapses of its own internal rottenness. And if the Communists succeed in this hidden bid for power, and a third world war engulfs our already tottering civilization, history will attest that it was not brought on by the Russian armies but by American citizens, by those whom we have placed in the highest positions of trust in this country who sold their birthright and honor to the enemy.

Such was the history of the Russian Empire in the days of the Czar. The latter had the largest standing army in the world. He believed Russia impregnable and dismissed all warnings of Communist influences undermining his regime as slanderous attacks against his trusted advisers and as unworthy of notice. When the Red's underground work had been completed he saw his mighty army disintegrate overnight, his trusted officials go over to the Soviets, and in the end he, his entire family, and the great Russian Empire were destroyed.

This pattern of waging a bloodless conquest from within, not without, has been the method by which every one of the Russian satellite countries have been forced under the Communist yoke. It is the pattern by which they eventually hope to destroy America, the only country in the world which they still fear and which alone has the power to block their dreams of world conquest.

In your address, Mr. President, you spoke of the Bill of Rights, of freedom of religion, of the liberty of the individual, of a man being considered innocent until he is proven guilty, of fair play, and these things are indeed the keystones of our liberty.

But liberty is not license. It does not include the right to destroy the very thing it seeks to uphold. Freedom of religion was never meant to give protection and immunity to those who do not believe in God, and are bent on eradicating religion from the face of the earth. Fair play does not mean foul play and the right to preach violence, hate and revolution.

These are terrible times of national emergency. The Red menace is reaching out to destroy not only our Bill of Rights, but America itself. It is doing this from within by underground, secret, and treacherous methods that cannot be faced and grappled with in the open. It is abusing every one of our constitutional privileges by using them as a cloak in which to hide its nefarious activities. To afford it the protection of these liberties as a safety zone in which to destroy our rights is national madness and suicide.

Our first fundamental liberty as assured us in the Declaration of Independence is the right to life, liberty, and the pursuit of happiness, yet because of the Red menace and the terrible emergency which is upon us (an emergency which you yourself have proclaimed) millions of our youth are being denied life, liberty, and the pursuit of happiness, and asked to sacrifice their young lives to protect these very rights for future generations.

Is it asking too much of the rest of us, especially those of us who hold positions of public trust and who are responsible for the training and guidance of our youth—to have our own actions and beliefs subject to this same vigilance? How else, except by the full light of publicity, can we cope with this enemy which always acts in secret and strikes in the dark? Should not we, the great civilian army of the home front, consider all such inquiries an honor and be ready at all times to voluntarily give proof of our loyalty in order to protect our loved ones on the firing line from this enemy which is within our gates? If we are true and faithful Americans what have we to fear?

Under the very rights you speak of, Mr. President every American who may be suspect is assured his day in court and is considered innocent until he is proved guilty. We have bent backward to give even those Communists among us who have been caught red-handed in their traitorous acts, an equitable opportunity to defend themselves and a fair and impartial trial.

Americanism, as I see it, and as you defined it in your speech, Mr. President, means and includes the basic right of freedom of

speech, the right of every citizen to say what he thinks. This fundamental right is the keystone of all the others, for without it none of the others can be preserved.

It is this right that Senator McCARTHY has used to such great advantage in uncovering the Red trail in our State Department. Wherever this vigilant and outspoken Senator has seen smoke, he has called for an investigation of fire. And this is what every one of us should do in these perilous times. It may result in the destruction of some of our false prophets, but it will save America.

In conclusion, may I briefly relate a personal experience which is typical of the role that even the most humble among us can play in the present emergency. This is the case of a so-called honorable American who was the founder and respected leader of one of our youth movements. He is one of the most prominent labor attorneys in the United States, has practiced before the United States Supreme Court, and written well-known and authoritative books on constitutional law. His reputation was that of an outstanding American and a brilliant and loyal citizen of his country.

I accused this man of being a Communist, of having been the founder of the Marxist movement in this country, of advocating the abolition of the power of the Supreme Court of the United States, of urging the workers of this country to resort to violence and revolution if they could not obtain their ends by peaceful means.

For having so accused this great man, I was sued by him for libel, called a character assassin, lost many of my friends and my health, but in the end I won out and pulled the mask from his face, and proved him a traitor to his country by his own written words.

To attack those evil ones who are in power and expose them is a heart-breaking experience. One must expect to be ridiculed, maligned, lied about, be called a scandal-monger, and a defamer of character and faith. Such was my humble experience and such to a far greater degree is the continuing experience of that Paul Revere of the twentieth century, Senator McCARTHY. But until the Red menace is wiped from the face of the earth, such work must go on by those who are willing to subjugate their own lives and feelings for the greater good of the country they love.

It seems to me, Mr. President, that the rights you speak of were put in the Constitution by our founding fathers to give every American, the rich, the poor; the powerful and the meek; the intelligent and the illiterate; of whatever race, color, or creed, equality before the law and an opportunity to live together in freedom, prosperity, and happiness. These rights were meant to heal the hurts of fate of those who fled here to escape the oppression of foreign lands and who have helped to build here the greatest democracy in the world. But these rights were not put in the Constitution to protect those among us who would abuse and waste the gifts of freedom, nor those from foreign lands who would tear down the flag of democracy. Time and again, through our long history, Americans have risen in their might, and even temporarily laid aside some of these rights, to put down with hand of steel those whose aim it was to destroy all that we were, or hoped to be, and this, in our greatest hour of peril, is no time for softness. We must fight fire with fire and present a united, unbroken and loyal front to the enemy. Only thus can we help free the world and remain free ourselves, a people worthy of our splendid destiny. I am,

Respectfully, your comrade Legionnaire,

MAURICE TISHMAN.

The Schools and the Tidelands Issue**EXTENSION OF REMARKS**

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Drag Schools Into Argument on Tidelands Issue?" which appeared in the August 25, 1951, issue of the Saturday Evening Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY DRAG SCHOOLS INTO ARGUMENT ON TIDELANDS ISSUE?

The latest device to sell the Federal Government's grab of the traditionally State-owned tidelands is to link it with education. Those who oppose this aggression against the long-accepted property rights of the States are now told off by Fair Deal columnists for "attacking the children of the Nation." It is bad enough to be accused of being a tool of the oil lobby, but it takes a strong Member of Congress to hold out when the antidelands forces march into battle holding helpless kiddies in front of them. Nevertheless in its most recent expression on the subject, Congress seemed indifferent to this dubious appeal.

The way the children got into the tidelands row is interesting. To gain wider support for filching the property of the States, Senator LISTER HILL, of Alabama, suggested that the money received from oil leases in the newly acquired tidelands be distributed among all the States to support education. Members of Congress were then expected to forget the dangerous principle behind the seizure of the tidelands because so many of their constituents would be hounding them to cast a vote for the kiddies and not for the oil lobby. One thing we do owe Senator HILL, and that is the admission that under Federal control, as under State, the oil companies would still operate. Heretofore the idea of the liberals seems to have been that, with the oil companies out of there, oil would descend (or should we say ascend?) like manna from heaven.

Plainly the decision should be made on the merits of the case and not on what the Federal Government plans to do with the lease money, when, as, and if it gets any. If it is all right to disturb property values of long standing and throw the whole complicated question of land titles into deep confusion, then let Congress sanction the tidelands grab, even if the Interior Department uses the proceeds to support the price of marijuana. But if, as we believe, the tidelands grab is wrong in principle and will be catastrophic in practice, then distribution of the money among worthy and indigent spinsters won't make the deal any sweeter.

Until former Secretary of the Interior Harold Ickes raised the issue, there had never been any serious question regarding ownership of submerged land adjoining the coastal States. Justice Gray ruled in 1894 that the "new States admitted into the Union since the adoption of the Constitution have the same rights as the Original States in the tidewaters and the lands under them." In 1912 Chief Justice White observed that "each State owns the beds of all tidewaters within its jurisdiction." Chief Justice Hughes

said in 1935 that the new States had the same rights to tidewater lands as the Original States.

The present Supreme Court, in a series of decisions, reversed the accepted standards of a century and a half. In one of the Court's decisions on this matter Justice Black attempted to show that the claims of the Federal Government "transcended those of a mere property owner." What do they mean, "mere"? If they mean that property ownership—of your house, your car, your savings—is so tenuous that it can be upset whenever the Government decides to change the rules, then we are nearer the Nazi system than most people imagine.

North Dakota Mill and Elevator**EXTENSION OF REMARKS**

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "State Mill Shows Good Net Profit," published in the Kildeer Herald of August 23, 1951, showing that the mill and elevator owned by the State of North Dakota reported a gross operating profit for the last fiscal year of \$638,662.89.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE MILL SHOWS GOOD NET PROFITS

The North Dakota Mill and Elevator at Grand Forks reported gross operating profit of \$638,662.89 for the fiscal year beginning July 1, 1950, ending June 30, 1951, according to Gov. Norman Brunndage, chairman of the State industrial commission.

After deducting \$135,308.57 for depreciation and setting aside \$40,894.50 to reserve, there was a net operating profit for the year of \$462,459.82.

During the year 1,434,156 hundredweights of flour were manufactured and 1,403,438 hundredweights were delivered.

Tass a Department of the Soviet Government**EXTENSION OF REMARKS**

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. O'CONOR. Mr. President, in connection with my recent statement in the Senate concerning the need for positive measures to bring about the release of Associated Press Correspondent William N. Oatis, now imprisoned in Czechoslovakia for alleged spying for the United States, I urged that representatives of Tass, purported Russian news agency, have their licenses revoked and be denied the privileges of the congressional Press

Galleries, because Tass was not a legitimate news agency within the accepted meaning of the term.

In confirmation of this statement an article which appeared in the Washington Daily News of Saturday, September 8, written by James Daniel, made clear this point. It related how Tass, several years ago, officially declared, in connection with a libel suit in the British courts, that Tass possessed the immunity of the Russian Government itself. As proof of this, a declaration from the Russian Ambassador in London was produced to the effect that Tass was a "department of the Soviet Government."

With this clear evidence that Tass is not a reputable news-gathering agency, but merely a propaganda agency of the Russian Government, it becomes all the more urgent that action be taken to deny its representatives access to the sources of official information traditionally open to reputable newspaper and magazine representation.

The diplomatic rather than news-gathering status of Tass is something that must be kept in mind likewise in any considerations with reference to its representatives in this country. There was no question that Mr. Oatis represented a legitimate, reputable news gathering organization, the Associated Press. There is no question, in view of the facts contained in Mr. Daniel's article, that Tass is not a legitimate, reputable news gathering agency. All the more reason, therefore, why its foreign-born engineer director, here on a diplomatic passport, and its American-born puppets, should be denied the rights and privileges always accorded by this country to honest, decent news representatives.

I ask unanimous consent that the article from the Washington Daily News by James Daniel be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TASS, CLASSIFIED

(By James Daniel)

The question whether Tass is a news agency or an arm of the Russian Government was decided by that Government itself—it's a department of the Soviet Government.

This admission was made by the Russians in Britain in 1948. The question comes into discussion now because the standing committee of correspondents, which governs the congressional Press Galleries, is considering whether to rescind privileges to Tass employees.

Here's how Russia came to spill the beans on Tass:

When the Communists gained power in Czechoslovakia, Dr. Vladimir Krajina, secretary general of the National Socialist Party and a foe of communism, was a marked man. But Dr. Krajina, a member of Parliament, escaped and made his way to Britain. There he quickly became the leader of Czech refugees, who set out to inform the British public about the real facts regarding Czechoslovakia's Russian-engineered revolution.

The world-wide mechanism of Russian propaganda was set in motion to discredit him. In his homeland, the Communists announced they would try him in absentia for treason. In Britain, Tass attacked Krajina's reputation.

Soviet Monitor, a Tass publication printed in Britain, carried a story that Krajina had some connection with delivering a group of downed British aviators to the Gestapo during World War II.

In the opinion of non-Communists, it was a classic example of the totalitarian use of the big-lie technique.

Dr. Krajina promptly sued for libel. Papers were served on Tass officials in Britain. Then suddenly Tass asked the British courts to set the suit aside on the ground that it possessed the sovereign immunity of the Russian Government itself.

As evidence, Tass presented a declaration from the Russian Ambassador in London that it was a department of the Soviet Government.

Successive British courts ruled that this exempted Tass from any suit in British courts. Lord Vansittart, the British peer, angrily called the Tass bureau in London a nest of guttersnipes and denounced the Labor Government for preposterous and unprecedented extension of immunity to Tass agents at a time when the Reds were putting the screws on legitimate western newsmen throughout their empire.

Another British Member of Parliament pointed out that any foreign press agency claiming such immunity could print any lies it chose about any British subject with impunity. The Government talked for a time of amending the libel laws to prevent a recurrence of the Tass episode. Dr. Krajina later moved to Canada.

The present significance of the Krajina case is that it provides the American Government with solid grounds for stripping Tass employees here of all press privileges.

Hon. Albert C. Vaughn

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 12, 1951

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks, I desire to include the following article concerning our late colleague, ALBERT C. VAUGHN, of Pennsylvania. The article is from the Evening Chronicle, Allentown, Pa., of Tuesday, September 4, 1951.

IN THE WAKE OF THE NEWS—ANOTHER CONGRESSMAN PASSES

"Life hangs by a slender thread," someone observed. This is all too true as witnessed in the case of Congressman ALBERT C. VAUGHN who less than 1 year ago assumed high political office to become this district's second Representative to Washington to be removed from office by the hand of death in this generation.

A freshman in the halls of Congress, Mr. VAUGHN scarcely had an opportunity to try his wings. Serving as he did as aide to two former Congressmen had its differences from actually holding down the responsible position as the people's representative from the Eighth District.

Mr. VAUGHN's quiet demeanor contrasted noticeably with the vociferous nature so frequently associated with political figures. There was serious work to be done in Washington and Mr. VAUGHN exhibited his desire to take his assignment seriously by attending all sessions of both committees on which he served as well as the legislative deliberations themselves. Probably it was Mr. VAUGHN's persistent application to the work at hand that may have been a contributing factor in

the sudden breakdown leading to his demise. It is no easy task to absorb and weigh the countless number of factors required to bring one to decisions on current problems. Congress has been in continuous session since Mr. VAUGHN took his seat last January.

Hail to Armstrong County, S. Dak.

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. POULSON. Mr. Speaker, some of the tragedies of our present trends can be very impressive if presented in a humorous fashion. Spiritual Mobilization of Los Angeles, Calif., has put out a little leaflet calling our attention to one place in the country where there are no Federal employees. While they have these leaflets available for distribution in large quantities, I am taking the liberty of asking that the contents be placed in the CONGRESSIONAL RECORD.

The leaflet is as follows:

HAIL TO ARMSTRONG COUNTY, S. DAK.

(By Peter Steele)

It has become fashionable in recent years to dedicate the passing weeks to worthwhile institutions, persons, and events (and to a few not nearly so worth while as a 7-day salute would indicate). So far, to our knowledge, no one has yet suggested a national salute to Armstrong County, S. Dak., week.

You'll find Armstrong County three counties over and two counties down from the northwest corner of South Dakota. It comprises 518 square miles and has a population of 53. Its principal contribution to the economy of the Nation is livestock from its seven farms.

There you have it. Armstrong County, S. Dak., a small piece of ground much like other small pieces of ground inhabited by a small number of Americans—much like other small numbers of Americans—with one important difference.

You can travel the length and breadth of Armstrong County, you can talk to its 53 inhabitants, individually, one by one, you can search the dark corners of its buildings to your heart's content—and nowhere, but nowhere, will you find a single person occupying a single foot of floor space who makes his living as a civilian employee of the Federal Government.

That's right, there's not a single Federal civilian employee in Armstrong County, S. Dak. And, according to the 1950 Report of the Joint Committee on Reduction of Non-essential Federal Expenditures, Congress of the United States, Armstrong County is the only county left in the entire United States which can make that claim to fame.

HEADS WILL ROLL

You can be relatively certain this is the result of a clerical error for which heads will roll in Washington when the oversight is discovered. Where is the Department of Agriculture for example, with seven farms to administer? Where is the Department of Interior, with livestock panting for sanitary drinking pools built at public expense? And surely social security is being derelict in its duty, with 53 inhabitants to benefit. But until that oversight is discovered, the 53 inhabitants of Armstrong County remain, as

a group, the last vestiges of a fast disappearing race, Americanus Independentus—the rugged individual. To them we doff our hats and sing:

All hail to Armstrong, South Dakota,
Land of the free!
You have yet to fill your quota
With a Federal employee!

No one from Agriculture?
How do you farm?
No one from Justice?
Who keeps you from harm?

No one from Veterans?
By whom are you paid?
No one from Commerce?
How do you trade?

No one from Housing?
Who buildeth your shacks?
No one from Treasury?
Who takes your tax?

No one from Post Office?
Who sells your stamp supply?
No one from Military?
Who keeps your powder dry?

And no one from Security?
How, then, can you be social,
If you have no single bureaucrat
To decide things equivocal?

Even the Department of the Interior
Is from Armstrong's roster missed.
Tell me, Armstrong County,
How do you exist?

All hail to Armstrong County,
Where there's no "share the pelf,"
And despite the welfare staters,
Each does things for himself!

Utah Shows the Way

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, September 12, 1951

Mr. WATKINS. Mr. President, I request unanimous consent to have printed in the RECORD, and thus made a part of the permanent archives of the Government of the United States, an article which appeared in today's issue of the Washington (D. C.) Post. This article is an account of Christianity in action in the modern world. It is a story of mutual understanding and respect as practiced by the people of the State of Utah.

International military alliances and vast financial give-away programs will not bring us world peace. Military force tends to inspire counter force and breeds fear and suspicion. All the money in our National Treasury will not buy international brotherhood and good will. The true road to those goals is in the example which has been set by the people of Utah as described in the article by Mr. Kuhn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR NEW FRONTIER

(By Ferdinand Kuhn)

IRAN'S BEST NEIGHBOR—UTAH

The geography books say that Iran's neighbors are Iraq and Turkey on the west, the Soviet Union on the north, Afghanistan

and Pakistan on the east. But no geography book has disclosed that Iran's best neighbor of all—believe it or not—is the State of Utah. Partly by accident, partly by intelligent planning, a link of friendship has been forged between an ancient Moslem kingdom and a western American State which, at first glance, have nothing whatever in common. The story is worth telling to show how other American States may yet find neighbors in distant lands, and, in doing so, may help the foreign policy of their country.

The Utah-Iran courtship began in 1912 at an international dry-farming congress at Lethbridge, Alberta. The president of the congress was John Andreas Widsøe, of Salt Lake City, an elder of the Church of Latter-Day Saints and president of the Utah Agricultural College at Logan. One of the delegates was Ali-Kuli Khan Nabil, then the young Chargé d'Affaires of the Persian Legation in Washington, now a veteran diplomat who still lives here at 3618 Newark Street NW.

The Mormon and the Moslem struck up a friendship. Dr. Nabil was invited to lecture at Logan. The Iranian had not expected to feel at home in the Rocky Mountains, yet the very look of Utah suggested home to him. He found, too, that his hosts frowned on smoking and drinking, just as good Moslems do in Iran. And he encountered such hospitality, and such a breadth of view about other religions, that he promptly decided to send his four nephews to Utah to study.

They came, and were known in Logan as the Khan boys. One of them, Mohammed Aneen Khan Sepehri, became president of the agricultural school at Karaj, near Tehran; another, Seyed Jafar Khan, became adviser on animal husbandry to the late Shah Reza Pahlavi. In 1939, when the Shah needed an agricultural adviser, what was more natural for him than to turn to Utah? He chose Dr. Franklin Harris, a former professor at Logan who had become president of Brigham Young University at Provo.

Today Dr. Harris is back in Tehran as Ambassador Henry F. Grady's adviser on the Point Four program. On the Point Four staff are a number of the Utah graduates who followed "the Khan boys" to the Rocky Mountains. Other Utah graduates are serving in the Iranian ministries of agriculture and health.

The flow of students has gone on since 1912—slowly at first, but more swiftly in recent years—until by now there are at least 150 in Iran with Utah degrees.

Some of them did not have an easy time in the early years. Most of the Iranian boys came from wealthy families. They hired chauffeurs and helpers to clean up their test tubes in the laboratories, and they did not know that experimental work in agriculture meant grubbing in the soil with their own hands.

Little by little, the Iranians learned American ways. They dispensed with the drivers, they tidied up for themselves, and bent their backs in the fields like other farmers. Some of them married Utah girls.

And now, to return to compliment, Utah is coming to Iran. Thirty farming and livestock experts from Utah will be among the Point Four technicians who soon will be stationed in 10 regional centers throughout Iran as part of the joint Iranian-American work of village improvement.

The Utah-Iran marriage has not been a complete success up to now. Sometimes Utah graduates were kept out of important posts in the Government because of political jealousy. Sometimes their training in Utah was not closely enough related to the work they would have to do back in Iran.

But the interchange has had this supreme merit—it has put at Iran's disposal the ex-

perience of a State with many comparable problems.

Utah, of course, has no monopoly on the able American technicians now in Iran, who come from many States and often from State and city governments. Nor is Utah the only place where Iranians are studying in this country. But of hundreds of Iranian students here Utah always attracts a large number.

The Utah experiment suggests that other States might well develop similar connections with other foreign peoples who have comparable problems.

The Greeks, for example, can find their soil and climate reproduced in many parts of California. The Arab peoples can learn much from the experience of Arizona and New Mexico. The Turks, farming and grazing on the high plateau of Anatolia, might find the answers to many of their problems in the range country of Montana.

The American exchange-of-persons program can become more effective, more directly related to foreign needs in the future, if the land-grant colleges attract more students from countries with comparable climates and conditions. And the work of technical cooperation abroad can have a greater impact if State and city governments lend more of their experts to work in counterpart countries abroad. Here is a problem the Federal Government might well put before the governors' conference later this month.

Neonazism in Europe

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. JAVITS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of September 12, 1951:

NEONAZISM IN EUROPE

That an ideology gripping two powerful nations for well over a decade should be extirpated at a blow, leaving no remnant or trace, is altogether unlikely; and observers of the European scene have watched for recurrences of the Nazi poison. There have been reasons for some disquietude. While the main drift of affairs has been measured in terms of the relative strengths of democratic and Communist votes, a sinister theme has been struck with increasing force—the theme of nationalism carried to the point of xenophobia in dissident parties of postwar Italy and Germany. The American Jewish Committee has just issued a detailed report on neonazism in these two countries. Though the names of the scholars who compiled it are not given, the study bears the marks of careful research, and its conclusions are worthy of note.

In Germany, the report points out, the neo-Nazi Socialist Reich Party won 367,000 votes in the Lower Saxony elections last May, or 11 percent of the total vote cast. In Italy the neo-Fascist Italian Social Movement won some 600,000 votes in two groups of municipal elections, or roughly 4 percent of the vote cast. This was double the strength displayed in the same cities 2 years previously. Meanwhile there are signs that a Fascist international is coordinating the movements in the separate countries.

The propaganda of these parties does not correspond in all regards to the outpourings

of the prewar epoch; but there is at the bottom of it the same excessive and narrow nationalism. This manifests itself in anti-communism. It manifests itself in an equally fierce anti-Americanism and a disdain of democracy in all forms. The resulting neutralism sometimes goes so far as to invite a quick Soviet occupation rather than risk a sustained struggle. In this doctrine of despair, in this total negativism which ends by embracing the very communism it disavows, the new Nazi and Fascist movements bear obvious resemblances to the old. The final indecencies of racialism we shall perhaps be spared, at least until the neo-Nazis find conditions more propitious for their evil work.

It would be easy to exaggerate the importance of these movements. A flurry of nationalism is not unnatural in present circumstances, and the fact that the principal parties in Germany and Italy in some measure appeal to it does not mean that they have been infected. Nevertheless the danger needs to be watched. Nazism grows where men are without hope, where they suffer from a sense of mass injustice, where they are frustrated, rootless, and afraid. It is to remove the cause of such conditions, as well as to withstand the more immediate threat of communism, that freemen must dedicate their energies.

The Common Strength of Freemen

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. HULL. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an address by the Honorable Charles F. Brannan at the dedication ceremonies in connection with the opening of the Flambeau River station, Ladysmith, Wis., on August 26, 1951. The Flambeau River station is a part of the great Rural Electrification Administration-financed Dairyland Power Cooperative generating system which supplies electrical energy at wholesale rates, and is owned and controlled by 25 REA distribution cooperatives operating in the States of Wisconsin, Minnesota, Illinois, and Iowa.

The address follows:

THE COMMON STRENGTH OF FREEMEN

In accepting your very kind invitation I feel that I am meeting here today with people with whom I have a great deal in common. I am by nature a peace-loving person, but I am sure you know that willingness to fight for the things we think are right, occasionally to be beaten, but to come back and continue to fight hard is one of the essentials for any person in public life today.

I know you are by nature peace-loving people, who would prefer to be able to do quietly the good work you have in hand. But anyone who has acquainted himself with the history of this great Dairyland Power Cooperative knows that you have had a more or less continual uphill struggle against unequal odds to reach the position of strength you now enjoy. You are today the world's largest cooperative power business. You are strong, and as you grow, you become stronger; but you have had to fight for that growth and that strength.

I would not want you to be deceived in that strength. I believe that you face even

greater problems ahead than you have yet solved. The forces which you have been pained and surprised to find arrayed against you have not finished yet. They will shift the conflict, they will join the struggle in new ways, but they will not quit now nor at any time in the future that we can see. Moreover, the very nature of the business in which you are engaged will bring you new problems as you solve old ones. Yet the same vitality that you have shown in the past will carry you forward if you will define accurately the battle you have joined, see clearly the problems you confront, and if you will persevere, as you have in the past.

Let's look at that past.

In the year 1882, on Pearl Street, in New York City, Thomas A. Edison set up the first public electric system. His plant had a generating capacity of less than 900 kilowatts, and it served customers within a distance of 12 city blocks. The electric wires were new and strange things in that day. The power he generated and sold was used almost entirely in arc lamps and carbon filament light bulbs. By modern standards the system was crude, incomplete, and the power he provided was not of the rock-steady dependability we expect. Yet it was such a success that the industry grew. The power industry of the United States has grown from that beginning.

In that same year, 1882, there wasn't any Rusk County; and there was no town called Ladysmith. This was part of Chippewa County, and the pleasant city near us was the town of Warner. This whole region, where now your prosperous and powerful cooperative spreads out as a resource to everyone, was then largely wilderness. Part of the wilderness had been cut over by logging companies who took from the land but returned nothing to it. Part of the land was being cleared for farming, some farms grew grain and hay for the horses of the logging camps. Hardy folks grazed sheep on the cut-over land, and they had difficulty at times in protecting them from the wolves. There were some towns and cities. Here and there farming communities had developed, but it is not stretching the truth to say that the electric power industry and the agriculture of this region have grown up pretty much during the same period of history.

In those early days water power was important for the operation of mills and factories; and as far back as 1877 the report of a Government explorer mentioned that there was an excellent site for a power dam here a little way up from the town that is now Ladysmith. He had no idea that the power it would some day develop, instead of being carried by belts, pulleys, and line-shafts, would be carried by a high line crossing a score of counties in giant steps.

By the middle of the 1930's there was no city, not a town of 5,000 people or more in the entire Nation, which was without electric power line service. In those well-populated areas, the commercial power companies had done a consistent job of making power available. Electric lights had long been taken for granted in city homes. In many industries electric power had gone to work.

At that time—the middle 1930's—there were about 200,000 farms in the State of Wisconsin, and close to a million people lived on them. They were staggering under the depression of the times, but they were continuing to produce their share of the agricultural products the Nation needed. They had begun to recover a little with the aid of Federal emergency programs undertaken in order to get things going again.

Those were the times when the Rural Electrification Administration was organized.

It is safe to say that if anyone in a city or town with a population of 5,000 or more wanted electricity in his house, or in his factory, he could get it. But how was it on the farms of Wisconsin, then? I might speak of the farms of Minnesota, Iowa, Illinois, or any of these great States of the Midwest—although the exact statistics vary, the general situation was the same.

Not even as many as one farm in five, in Wisconsin, had electric power. To tell the true story we have to look further, and notice that the less-than-one-fifth of the farms that did have electric power were mostly those near the major cities.

Up here in Rusk County, and in this whole great Wisconsin-Minnesota-Iowa-Illinois region the percentage of farms which had electricity was very low, indeed.

These farms wanted electricity. How many times did you see farmers, in that period, putting up electric systems operated by a one-cylinder gasoline engine and a bunch of storage batteries? It was better than kerosene lamps, but it wasn't what farms needed.

In those middle thirties, there was a deep sense of futility on the part of many farm young people. Many of our best young people—the kind this Nation needs on its farms—felt that in order to enjoy the many real advantages of modern comfort they must leave the farm and go to the city.

If that had continued, it might have undermined our agriculture at the core of its existence—the people who make it up. But the American people began using their Federal Government to undertake a comprehensive program of wise, original, far-reaching farm policies which have had the most profound effect in the years since, enabling farmers to adjust their entire way of living to meet the challenge of the times. The program of the Rural Electrification Administration was but one of these. Among the others, without which REA would stand alone and weak, have been price support policies, more adequate farm credit, marketing improvements, and aids to soil conservation.

The job of REA has been to make it possible for farmers to bring electricity from the high lines to their own farms and, if need be, to generate their own electricity for those high lines.

Industry spokesmen told us back in the middle thirties, as you remember, that farm electrification had gone about as far as it could go.

Well, in one sense it had. It had gone to a point you folks in Dairyland know very well indeed. When REA was founded, electrification by commercial public utilities had gone right to the cream-line, or what they thought was the cream-line, and there it had stopped. Many farmers urgently requested that their farms be connected to the high lines, but in vain.

Then the President, under emergency powers, established the Rural Electrification Administration, May 11, 1935. The following year Congress passed the Rural Electrification Act of 1936.

Within a year, your leaders began to work for an electric system of your own, and it wasn't long before you had an REA loan and you were able to begin the job.

The history you have written since then is a history of which you can be proud. Many of us have been watching with satisfaction the soundness with which you have organized and managed this business.

When your rural cooperatives banded together to form Dairyland, in 1941, just about half the farms in Wisconsin had electricity, and they were still mostly the farms near to large cities. The rest of the farms were too far out, according to the commercial electric companies. So those farmers would have to do without the convenience and economy of electric lights and power. They would have, except for the fact that by form-

ing your own cooperative electric business, you solved those problems for yourselves.

In many places in the country, REA cooperatives have found it most advantageous to buy their power wholesale from commercial utilities. This has been a very happy arrangement where the commercial utilities have had the vision to see that they could serve their own best interests well through such a connection. In other instances, as you know only too well, power companies have been reluctant to sell electricity to cooperative distribution companies, and have tried to sell it at prices which would severely disadvantage the REA co-ops.

The fact is, the commercial utilities haven't much spare electricity to sell. The electric industry of the Nation now has a total capacity to generate electricity which reflects a very slim margin of reserve. That margin is so slim that if no new generating capacity should be added, there is no assurance that the growing demand for electric power could be met this very winter. The Nation is slipping, in the race to keep up with its own electric power requirements. The margin for growth, has diminished until now it is a matter of a few months. Nor can those who oppose development of our power capacity argue that they have not been able to afford to build new generating plants. During the calendar year 1950, they paid stockholders some of the highest dividends in history.

I, for one, am grateful for the private enterprise, the private initiative, the willingness to take a large commercial risk that you people have shown in building this great dam, and installing this Flambeau Hydro-Electric Station. Its electric output is needed. I am grateful for the life of such a man as your grand, beloved, late president, Mr. E. J. Stoneman. I am grateful for the energy, the devotion, and the clear vision of such men as your present leaders, and you, yourselves who are the source of their strength.

This station—your station, for you are its owners—is evidence of your determination. It shows how important electricity is to you. With a formal power rating of 15,000 kilowatts, I understand that it is already working at 19,000 to 20,000 kilowatts. The mighty power of this 65-foot head of water is working for you, lighting up the night, making your dairy industry more efficient, and supplying power for rural industries that process your products.

It is correct to say that Dairyland grew to its present size out of your need to generate electricity for yourselves after you tried, and tried hard to buy it from power companies who couldn't or wouldn't sell it to you at a fair price.

As far back as 1936, the Wisconsin Power Cooperative, which is now part of Dairyland, began to try to buy electric power from commercial power companies at reasonable wholesale rates. No price the companies offered was within reason, so the Chippewa Falls generating plant was built. The Wisconsin Power Cooperative folks reasoned—correctly, as history has proved—that if they couldn't buy it at a fair price, they could generate it at a fair price. They did just that.

A similar situation with a similar result arose in the southern part of Wisconsin, and another Dairyland predecessor, Tri-State Power Cooperative, began generating electricity. In the beginning of your own electric power business, your managers and boards of directors tried to buy power wholesale from the power companies, and relieve those companies of the expense and hazard of long distribution lines. But it was not possible to reach an understanding.

Unfortunately, the power industry apparently has still not awakened and does not appreciate the job in rural electrification that still needs to be done.

Perhaps you saw, as I did, a copy of the announcement issued in June by the electric industry designating this week as Rural Electrification Week.

This particular announcement said, and I quote: "The electric-power industry announces plans to celebrate the near-completion of the electrification of America's farms. With the expansion of lines to rural areas this year, electricity will be available to 95 percent of the country." I am interested to note that the chairman of the committee supervising celebration of this Rural Electrification Week is also president of a Wisconsin electric company.

It is not surprising that he and other industry leaders believe rural electrification is now about finished. They have been saying the same thing for many years. In July of 1935, 16 years ago when electricity on farms was the exception, not the rule, a committee of the industry issued this statement—and I quote: "There are very few farms requiring electricity for major farm operations that are not now served."

Power company men have frequently tried to squirm out of this unfortunate statement by saying it was taken out of context. But if you will read the whole report you will be struck by the fact that the power company committee had absolutely no faith that farmers could be served with electricity on a sound, business basis.

At any rate this was only one of many statements to the same effect. For example, an industry spokesman told Congress in 1945, "The job of extending lines to farms and nonfarms will be practically over in 1948."

And there are other statements just as shortsighted.

It is clear, then, that the power companies and some of their leaders have been ready to celebrate the near completion of rural electrification for a good many years longer than most farms have had electricity. Even yet, any such celebration is a phony and a fake.

Or, in the words of President Truman, it is a publicity stunt. The President also said, "No doubt some people can be led by deception to believe that the rural-electrification job is now completed. However, I cannot believe that very many will be fooled—certainly the hundreds of thousands of rural families who are still waiting for the blessings of electric light and power will not be."

President Truman also pointed out that "we must be sure that our farms are in a position to use the production efficiencies and labor savings of electric power. This is particularly true now when we need to make our manpower as productive as possible and when food may become a most critical factor in our struggle against the evil forces of world communism."

The job the President is talking about takes power on the farm as well as in the factory. Obviously, connecting farms to high lines is not the whole job. Demand for power increases and has to be supplied. The rural electrification job will not be finished when every farm is hooked up any more than the job of building houses can be finished. If we understand the growing need for power, we see clearly what the power industry has in mind in wanting to give a final eulogy to rural electrification. It wants to keep any other Flambeau dams from happening. It is part of the long-time opposition you and other co-op people have faced in getting your own generation and transmission facilities.

Flambeau is just a chapter in a long story. You well remember how your directors have had to fight for this dam through public hearings, the State legislature, the Rusk County Board, the legislature again, Washington, the Public Service Commission, the

Conservation Commission, and finally the Federal Power Commission. You know that a large part of the opposition certainly the most strenuous part of it, came from the very same power industry that could not or would not sell you electricity at a price that you could pay. Here they tried to keep you from generating it yourself.

Finally Dairyland won. In March 1940, the construction work began. Today we are here to dedicate this plant. It is finished and even as we meet here, it is turning out the power that you need at a price you can pay.

Today the total generating capacity of Dairyland is more than 125,000 kilowatts; you have more than 1,700 miles of high voltage transmission lines, delivering this power to your members. Your interconnections are planned so that almost every point in your system can be served by alternate, emergency power sources if some generating plant should have trouble.

I congratulate you members of Dairyland, you people who own it, when it serves. I congratulate your board of directors, your manager, and your president. I imagine that 20 years ago not one of you ever dreamed you would be in the electric-power business; some of you didn't even have a reasonable hope of electricity on your farms. Yet today this project is finished and at work, and other projects are coming along at a great rate.

I am sure you know your directors are not stopping, nor even slowing down in their forward planning. They have already drawn up a timetable as far ahead as 1960, and some of them are thinking ahead to the days a generation from now when little folks who are babes in arms today will be the grown-ups, out in the early morning doing the milking, and making coffee on the electric range, and running Dairyland.

That is an attractive future, but it is not going to be easy.

For one thing, those who oppose you will try to find more effective ways to work through the Congress. You know, as I do, that the lending authority of the Rural Electrification Administration derives from the Congress. It is almost as if the Congress had its hand on the master switch that controls all the additional electricity you will want to use next year and the years after. You will need to make sure the master switch is in the hands of people who believe in the American future and who face the future with courage rather than timidity.

Upon the Congress also depends the question of keeping taxation fair to cooperatives. So far, the organization bearing the euphemistic name of National Tax Equality Association has spent a lot of money but has not persuaded the Congress to tax cooperatives out of business. This does not mean NTEA will quit trying. It will not be content with anything less than a tax program that completely disregards the fundamental characteristics of cooperative business. NTEA wants the Government and everybody else to think of a cooperative as just a corporation, which is very much like putting all the cows and horses of the country together and calling them all cows. You will not dare to relax your vigilance against unfair taxes or even death taxes on your cooperatives.

Nor can you assume that it will become easier in the future to meet increasing demands for power.

As long as power companies, whose main job is not to make kilowatts but to make dividends, believe they see in you a threat to their future business, they will continue trying to obstruct you. They will try to make it impossible for you to generate your own power. They will try to confuse things by talking about socialism. Incidentally, I want to ask: Do you think you are socialistic because you do for yourself what somebody else wouldn't do for you?

The commercial power companies had their chance and partly lost it, but I believe their chance is not entirely lost. There are three-quarters of a million farms still without service, and farms already connected are using more and more power. It is obvious that there continues to be a great opportunity for the power industry to render a real public service.

If I were a New York City public relations firm I would think about that for a while, before I cooked up a so-called Rural Electrification Week to celebrate the near-completion of rural electrification.

It is the fundamental interest of all of us to help in every way to strengthen this Nation. We are mobilizing the strength of the Nation in support of our freedom, which requires that we lend our strength to freedom everywhere. How long we shall need to remain mobilized, I can not say, but I am not ready to believe that the plans for world conquest the Communists have openly announced for so long, have been abandoned.

It is in the interest of all of us to support the mobilized strength of the United States until such time as freemen can safely lay down their arms and enjoy the freedom they have defended. You can do that by keeping such things as your own Dairyland Power Cooperative strong, and on a sound business basis. You can strengthen the Nation by farming well, as you already do. Agriculture's strength is absolutely vital to our country, and you are part of that agriculture.

I take pleasure in sharing your dedication of this station. As it confines and puts to human use, in regulation of stream flow, in beauty, and in electric power the waters of this picturesque Flambeau River, it is the material embodiment of the firm purpose of free men. For so long as it shall stand, for so long as these waters shall flow, may it be a monument to your cooperative effort, the common strength of freemen.

Release of Inactive Reservists

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. AYRES. Mr. Speaker, many Members of Congress have been very vocal in connection with the confused Reserve program. To date most of our suggestions and ideas have been bypassed in the Defense Department.

Last week I talked with Mrs. Anna Rosenberg, Assistant Secretary of Defense, regarding a system to release reservists. After talking with her I am convinced that the inactive reservists involuntarily recalled to active duty must be released through a unified system equitable for all branches of the armed services.

At the present time there are thousands of men classified I-A who could be called immediately. I think it is only fair that every effort possible be made to release the inactive reservists and replace them with men who have not previously served.

Although the system I propose which was introduced today and printed below may not be the most perfect release system, I sincerely believe it is a step in the right direction.

I trust it will be given favorable consideration and that the inactive reservists will be able to go home to their families in the near future.

A bill to provide for the release of certain members of the Inactive and Volunteer Reserve serving on active duty with the Armed Forces of the United States

Be it enacted, etc., That (a) effective November 30, 1951, each member of the Inactive or Volunteer Reserve who has been or shall be involuntarily ordered to active duty with the Armed Forces of the United States, shall, unless sooner released under regulations prescribed by the Secretary of the military department concerned, be released from active duty when he has been credited with 50 points as provided in subsection (b) if he makes application for release to the Secretary of the branch of service in which he is serving. Any member released pursuant to the preceding sentence shall not thereafter be ordered to active duty for periods in excess of 30 days without his consent except in time of war or national emergency hereafter declared by Congress.

(b) Each such member shall be credited with one point for each month he shall have actively served with the Armed Forces of the United States after September 30, 1940, and shall be credited with 10 points for (1) his spouse, if any, (2) each of his children, if any, and (3) each of his other dependents, if any

(c) For the purposes of this act (1) the term "children" means legitimate and illegitimate children, legally adopted children, step children, foster children, and any other persons who are supported in good faith by such member in a relationship similar to that of parent and child, but shall not include any person 18 years of age or over unless such person is physically or mentally handicapped, and (2) the term "dependent," when used with respect to any such member, means any person who is a United States citizen or who lives in the United States or its Territories or possessions, and whose support such member has assumed in good faith, but such term shall not include any person 18 years of age or over unless such person is physically or mentally handicapped. In the consideration of a dependency claim, any payments or allowances which are payable by the United States to the dependents of members of the inactive or volunteer reserve serving on active duty with the Armed Forces of the United States shall be taken into consideration, but the fact that such payments or allowances are payable shall not be deemed conclusively to remove the grounds for the dependency claim.

Foreign Relations and the American Press

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, September 13, 1951

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the convention of the New England Associated Press News Executives Association and the New England Association of Circulation Managers, at Rangeley, Maine, on September 6, 1951. The address was a part of a debate with the senior Senator from Maine [Mr. BREWSTER] on the subject, Foreign Relations and the American Press.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN RELATIONS AND THE AMERICAN PRESS

Mr. Chairman, I don't mind telling you that I was very pleased to get the invitation to address this group. I was also pleased to find that my fellow speaker was to be my esteemed colleague from the State of Maine.

Now Senator BREWSTER and myself have had occasion to disagree as to what America's foreign policy ought to be. I won't deny that. But frankly, I can think of no one in the Senate with whom I have found disagreement more stimulating.

So I am prepared to take a position today which may well find something less than favor in the eyes of the senior Senator from Maine.

I am told that the great majority of you are editors of New England papers served by the Associated Press. Others are on the staffs of the various Associated Press bureaus in this area.

In short, all of you are direct participants in the molding of public opinion.

Such is your role whether or not you desire it. And the obligations imposed upon you by virtue of that role are indeed considerable.

In a democracy where the people decide who shall be the wielders of governmental power, the press is among the foremost channels through which the average citizen gets the evidence upon which to base that decision. In today's danger-fraught world, the nature of that decision is more intimately related to America's survival than ever before.

There can be little question but that what appears in the news columns and on the editorial pages of our newspapers has a vital bearing upon the policies adopted by our Government. Colonel McCormick may have his doubts about that. But then there are some Americans who read papers other than the Chicago Tribune. They may well read your papers in preference. The papers of one of our largest national chains carry the credo—and I quote—"Give light and the people will find their own way."

I heartily subscribe to that credo. But I am equally firm in my conviction that the type of light shed is a factor of no mean concern in the crystallization of that intangible something we call public opinion.

With your indulgence, I am going to try to do a little light-shedding of my own. I would like to demonstrate that the foreign policy this Nation is currently pursuing is a thoroughly realistic one. I would like to demonstrate that that policy represents our surest hope for peace and survival.

No American in his right mind will deny that Soviet totalitarianism is bent upon world conquest. That is implicit in Marxist-Leninist dogma. And Stalin, for all of his references to the coexistence of capitalism and communism, has not departed from that dogma.

The Kremlin is no respecter of morality. The end justifies the means and that runs the gamut all the way from lying propaganda to subversion and outright aggression.

Are there any among us so naive as to question the premise that Moscow is out to conquer the world for communism? The attempted subversion of Greece, the Berlin blockade, the Korean aggression, were not all of these but threads in the gigantic Soviet web?

If there is one thing that the Kremlin's activities since World War II's end have taught us it is that strength is necessary for the free world's salvation. Furthermore, the only strength which will deter Soviet aggression today is the united strength of all the free peoples.

The basic premise of this Nation's foreign policy, therefore, is and must continue to be: America cannot go it alone.

Our fate is inextricably bound up with that of the entire free world. An anti-Communist Western Europe, a stable Near East, and an economically developed southeast Asia are as essential to American security as our stockpile of atomic weapons. America's defenses cannot stop at her coast lines.

Many of you will undoubtedly recall the statement Gen. Douglas MacArthur made on this very point when he appeared before the joint Senate committee investigating the circumstances of his dismissal—a statement which was widely commented on by many of your papers.

In reply to one of my questions as to his policy in Asia he said: "My hope would be, of course, that the United Nations would see the wisdom and utility of that course, but if they did not, I still believe that the interest of the United States being the predominant one in Korea, would require our action."

I asked: "Alone?"

He replied: "Alone if necessary. If the other nations of the world haven't got enough sense to see where appeasement leads after the appeasement which let to the Second World War in Europe, if they can't see exactly the road that they are following in Asia, why then we had better protect ourselves and go it alone."

You will recall that the general received an excellent press as the result of that statement.

I will not take the time to discuss the hackneyed charge that we are pursuing a policy of appeasement in Asia other than to state that our policy there is anything but appeasement.

I simply invite your attention to MacArthur's basic premise—that this Nation can afford to go it alone.

When the general was asked whether or not he thought that his "Asia first" approach might weaken our over-all global position, he replied that global policy was not his concern.

When those of my sadly misled colleagues in the Senate who take an isolationist or semi-isolationist position are asked why they oppose our European-aid program, they either respond with the MacArthur line or complain that the Europeans are doing virtually nothing to help themselves.

I think that the sooner we expose these and other alleged justifications for destroying the free world's unity for what they really are, the better off all of us will be.

Let's look at the facts—not at the fancies.

The first point that needs to be made is that America is anything but self-sufficient. Pittsburgh, Cleveland, and Detroit would be ciphers on the industrial map if we were suddenly cut off from foreign raw material sources.

Steel is the bellwether of any industrial economy. Of the 13 pounds of manganese that go into every ton of American steel, less than half a pound is produced at home.

Of the 15 basic metals, America has only 6 in any quantity. We must import all of the others.

We import all of our tin, natural rubber, and cordage fibers. A third of our lead, three-quarters of our tungsten, and more than a quarter of our copper come from abroad.

Truly, we are not the self-sufficient Nation so many of our isolationists make us out to be. The sinews of our current great national defense effort are anything but entirely home-grown.

Inasmuch as Europe is the area to which the overwhelming bulk of our foreign aid has gone to date, we ought to take a close look at what Western Europe really means to us.

It should be common knowledge for any alert high-school boy that this country cannot do without Western Europe.

A Western Europe in Soviet hands would see America and her few remaining allies outnumbered, outgunned, and outproduced.

Western Europe's more than 275,000,000 people are among the most highly skilled and productive in the world. Her steel, coal, and electric-power production normally surpasses that of the entire Soviet bloc.

Western Europe's civilization—the cradle of our own in many ways—is no mean barrier to Soviet expansionism. But if we allow our domestic penny pinchers to douse the light of freedom in the hearts and minds of our European friends, that barrier will have ceased to exist.

We will have lost Europe by default.

In terms of America's security, Western Europe's strategic significance is second to none.

Of what earthly good are air power and atomic weapons if we lack the bases with which to use them most effectively in our own defense?

Western Europe gives us ready air access to the heart of the Soviet power potential. Our own continent does not.

Do we prefer to fight a battle for survival amidst our own ruins?

A strong, stable Western Europe represents our best hope for prohibiting that frightening possibility.

I think that the relationship between the free nations of Europe and ourselves was put very well in a recent report issued by a subcommittee of the Senate Foreign Relations Committee, which investigated our economic- and military-assistance programs for Western Europe. I might add that Senator BREWSTER and I were members of that subcommittee, of which I was chairman.

The report reads—and I quote.

"The United States is not seeking to build strength in Western Europe in order to protect those countries from aggression any more than the countries of Western Europe are building their defenses primarily so that they can help protect the United States. The fact is that the individual and collective self-interests of all free nations coincide."

That, I repeat, is from a report issued by a subcommittee of which both Senator BREWSTER and myself were members. This committee of nine members made a rather unusual record of coming back from a hectic trip all good friends and of making to the Senate a unanimous report.

Now let's look at the charge that the Western Europeans have not been carrying their share of the defense load. Much has been made of this issue.

Shortly before setting out to convince New Englanders that their choice in 1952 lay only between Taft and chaos, the Senator lambasted the Europeans on the floor of the Senate.

He expressed his chagrin that only 13 percent of Europe's population was in uniform while our own percentage was 2.3.

Far be it from me to question the Senator's percentages. He is assuredly an astute mathematician.

But I can and must question what appears to be the basic premise: That the Europeans are falling down on the job.

It is true that, percentage-wise, the Western Europeans now have fewer men in uniform than we do. But it is also true that that situation will very shortly be remedied.

General Gruenther, General Eisenhower's deputy in the North Atlantic Treaty military organization, has testified that—and again I quote—"the European effort as currently projected for the coming year is roughly at the level which it appears to be in the United States interest to propose."

Furthermore, there are some very excellent reasons for those percentages Senator BREWSTER is so fond of.

In the first place, Western Europe was a thoroughly devastated area only 6 years ago. It was she that felt the full impact of war.

Is it any surprise that Western Europe has yet to equal our own efforts in terms of de-

fense production and mobilization of trained manpower? The Western European countries have virtually had to rebuild their economies from scratch.

Secondly, Western Europe suffers from profound equipment shortages. It would be useless to try to mobilize additional manpower until that equipment need is met.

Thirdly, rapid mobilization imposed on a shaky domestic economy might easily throw Western Europe into the sort of economic tailspin which would invite that Communist subversion which can be as dangerous to the free world as outright military attack.

A fourth point is that European armed manpower figures do not accurately reflect the extent of mobilization. According to our own officers at Eisenhower's headquarters, Western Europe has thousands of trained reserves above and beyond those men actually mobilized, but they have not these uniforms, on which so much stress is laid in the percentages quoted.

These reserves have not been mobilized primarily for lack of equipment and facilities. Taking these reserves into account, Western Europe's trained manpower does equal our own.

Much has been made of the fact that estimates for fiscal 1952 show that 15 percent of America's gross national product is going into defense budgets while in Western Europe the percentage is only 8.

But Western Europe has a per capita income of only one-third that of the United States. Yet it is contributing more than one-half as large a proportion of its output for defense.

The Western Europeans are carrying a much more severe tax burden than we are in terms of that burden's impact on individual income.

Figures, my friends, can lie. They lie when not used in their proper context. But the figures on Western Europe—when properly used—show that our allies there are truly doing their share to keep the free world united and strong.

But there are other evidences that American aid to Europe has reaped concrete results. We find them in Europe's industrial production; in the decline of Communist influence; in joint efforts to solve the more pressing economic problems.

Industrial production in the Marshall plan countries is up 44 percent over what it was in 1938. A truly amazing feat.

Agricultural production is up 9 percent above prewar. The notorious dollar gap which has been plaguing virtually every European nation was cut to \$1,000,000,000 in 1950.

I would be the first to admit that free Europe has a long way to go before it can be said that its economy is fully stabilized. Western Europe's standard of living is, at best, considerably below ours.

But American aid has helped the Western Europeans to help themselves. American aid has given the Europeans the tools with which to build an economy sufficiently strong to withstand Communist subversion.

In the political arena, the story is much the same. In every Western European country, Communist Party membership has dropped considerably since 1946.

The membership decline for the Marshall plan countries has been a full 30 percent between 1946 and 1950. In countries like Britain, Belgium, Norway, and Luxembourg, the drop has been 63 percent or more. Even in France and Italy—where Western Europe's largest Communist Parties hold forth—the drop has been some 30 percent.

In every Western European country with the exception of Italy, Communist voting strength has shown an obvious decline since the end of World War II. In France the Communists lost some 80 seats in the Assembly in the most recent elections. In

Britain, all Communist members of Parliament were defeated in the 1950 balloting.

In terms of joint cooperative action in the economic sphere, the Western European countries have shown themselves ready and willing to solve their common problems in the interests of a united front against Communist aggression.

A European Payments Union has been set up to facilitate intra-European trade. The Union operates by making it possible for currencies to flow where they are needed when they are needed.

The Schuman plan is well on its way toward implementation. When placed in operation, it will guarantee a single market for iron, steel, and coal. It will thus add considerably to European unity at a time when such unity is the essence of self-preservation.

Most Marshall plan countries have already entered into agreements with each other whereby customs duties have been dropped on an important segment of their exports to each other. This, in itself, is doing much for the economic health of Western Europe.

Economically, politically, and strategically, free Europe has indeed gone far to meet the threat of communism and to build a better life for its people. These two objectives cannot be segregated in Europe any more than they can be segregated anywhere else in the world.

We have General Eisenhower's word that what we have given Europe we have not given in vain. We have his word to the effect that democratic Europe's morale is the morale of a people willing to defend its way of life against assault, whether from without or within.

American aid—the product of a sound foreign policy—has done much to build America's security even as it has contributed to the unity and security of the entire free world.

But so terribly much remains to be done.

It can and will be done as long as we remember that our own security rests upon the unity and strength of the entire free world.

No one has stated that principle more clearly than Mrs. MARGARET CHASE SMITH, the junior Senator from Maine. Mrs. SMITH has said—and I quote:

"We should give the greatest reassurance that we can to our present allies. We should reassure their protection with a protective wall behind which they can rally their forces, rebuild their morale, and reconstruct their governments. We should convince all nations that the United States is a reliable and desirable partner in alliances."

Mrs. SMITH's thesis is the thesis upon which our current foreign policy is based. It is the thesis that America must continue to accept if our democracy is to survive.

America ought not to go it alone. It is my sincere hope and prayer that America will never be forced to try to go it alone.

Use of All Available Weapons in War

EXTENSION OF REMARKS OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, September 13, 1951

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "If Size of Conflict Is To Dictate Use of Weapons, the United States Invites Defeat," which

appeared in the Independent, published at Anderson, S. C., on September 11, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF SIZE OF CONFLICT IS TO DICTATE USE OF WEAPONS, THE UNITED STATES INVITES DEFEAT

He was born twenty-odd years ago in a small city. His father made a living wage, his mother was a Christian woman active in the affairs of her church and neighborhood. He enjoyed the advantages of an average education in the public schools, although the times were confused and the future threatening. His parents had high hopes for him. His father hoped he would "have it better than I did." He was an average, decent, healthy American youth.

But the world did intrude with its evils and he hit the transmission line to a place called Korea. He survived the rigors of spring, and he rejoiced with his companions when the so-called cease-fire talks began more than 2 months ago. He might get to go home.

His hopes faded as the talks dragged out. All along he had been puzzled, because he was an intelligent boy, by the absence of the superweapons his Nation was supposed to have developed. He was angered by failure of policy makers to save lives by using the most devastating weapons in the American arsenal against an enemy which outnumbered him day after day.

The war in Korea was termed by the high brass and the diplomats as a "localized" war. They said that to keep it from spreading they had to pull their punches, to restrict the area in which he and his companions could hit the enemy.

He remembered how a vastly more widespread war had been ended in a matter of days when the first atomic bomb was dropped upon the enemy in Japan.

He recalled reading that the dropping of the bomb enabled the saving upward of 1,000,000 American lives that would have been expended in the storming of the shores of Japan.

Then a few days ago President Truman made a political speech in San Francisco in which he revealed that the United States had developed weapons even more terrible than the bomb. The President said the new weapons were "fantastic."

Last week, in the night, the Reds decided they wanted the hill upon which his company maintained outposts. The hill had been won at the price of scores of new graves. There was a brief, bitter battle for the hill. He was driven off, along with his companions. Next day they went back, under cover of artillery and aviation. He was killed and his name added to the lengthening list of those who have died in this "localized" war.

Already the question is being raised in Washington as to why these "fantastic" new weapons are not being used in Korea to hasten the end of that war and to save American lives.

Senator JOHNSON of Colorado wants to know why men are being forced to fight with bayonets while national leaders brag of possession of Buck Rogers equipment.

The Soviet Russian strategy seems to be the creation of numbers of "small" wars in all parts of the world. The reason is clear: falling to match the United States in atomic weapons, they will fight the kind of wars where these will not be used—until such time as the Reds have the same or superior strength in new weapons.

"Fantastic" new weapons are doing no good so long as a policy allows the size of a conflict to dictate the use of weapons.

Large war or small, the United States should serve notice that in the future everything in the arsenal will be thrown at the enemy. It is nothing short of criminal folly to permit the continued killing of American men when the Nation has bought and paid for means to stop their slaughter.

Investigation of OPS

EXTENSION OF REMARKS OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. AYRES. Mr. Speaker, I am today introducing a resolution asking for a complete investigation and study of personnel and positions in the Office of Price Stabilization in order to determine, first, whether such personnel are qualified to perform the duties of the positions to which they have been appointed and second, to what extent there have been created in the Office of Price Stabilization positions which are unnecessary to the proper performance of the functions of such office.

During the recent recess I had occasion to attend a hearing conducted by the Cleveland office of OPS. The purpose of the hearing was supposedly to discover whether a small butcher was violating OPS regulations. However, the true facts of the situation are that this small meat dealer was being harassed in an effort to uncover information on the Wayne Packing Co., Inc., a slaughterer who the OPS had refused a permit to operate. It was disheartening to witness highly paid special agents of the OPS pick on a little businessman just because he had sold beef under the ceiling price without having the price posted on the beef.

Printed below is the exact subpoena issued in the case. Similar subpoenas were issued to 34 other small butchers.

Price control is one thing and business control is another. In my opinion, the OPS operation is directed primarily at controlling business.

I am aware that most bureaucrats had found a roosting place prior to the start of OPS. Then when OPS came into being those that were left over were apparently dumped on poor Mike DiSalle.

Judging from recent press releases from the OPS office, they based their success on the number of people they are able to keep on the payroll. If the investigators who conducted the hearings in Akron last week are typical, and I have every reason to believe they are, I am certain this Congress will see the fallacy of continuing the OPS in its present form.

Speaking as a small-business man, and one who is familiar with sound business principles and ethics, I would appreciate the opportunity of assisting in the investigation of the OPS.

UNITED STATES OF AMERICA, ECONOMIC STABILIZATION AGENCY, OFFICE OF PRICE STABILIZATION

SUBPENA DUCES TECUM

To Damił Kapusinski, doing business as Buchtel Market, 544 East Buchtel Avenue, Akron, Ohio.

You are hereby commanded to appear in the Municipal Building, at room 102, 166 South High Street, in the city of Akron, State of Ohio, on the fifth day of September 1951, at 1:45 p. m., to give testimony concerning posting of selling prices on meats, selling prices on meat, and the display of meat products in your store and to bring with you and produce for inspection at said time and place, the following books, records, and documents: all purchase invoices and statements, and daybooks or ledgers, into which such purchase invoices or statements are entered, from April 1, 1951, to date.

In testimony whereof, the undersigned, an officer designated by the Director of Price Stabilization, has hereunto set his hand this 29th day of August 1951, at Cleveland, Ohio.

CREIGHTON E. MILLER,

District Enforcement Director, Office of Price Stabilization, Cleveland, Ohio.

Problem of Allied-Iron Curtain Trade

EXTENSION OF REMARKS OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, September 13, 1951

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Trade Dilemma," by Ludwell Denny, which appeared in the Washington Daily News August 30, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRADE DILEMMA

(By Ludwell Denny)

The problem of Allied-Iron curtain trade has not been changed, much less solved, by passage of the Battle bill.

It remains a strain on Allied relations and a domestic political issue in the United States. Unless Washington obtains tighter Allied restrictions on shipments to Russia and the satellite states, the issue can grow until it wrecks the mutual security program.

If the situation is allowed to drift it is only a question of time until American public opinion will force Congress to ban, without discretion, all American aid to any country exporting to Red countries anything which may be used in manufacturing war materials—and that covers almost everything. Rather than submit to such a drastic embargo our major allies would sacrifice American aid and no adequate West European rearmament would be possible.

There is a temptation for the administration and the Allied governments to misunderstand the Senate defeat of the Kem amendment, which would have made a sweeping ban mandatory. The Kem type legislation will be introduced again and again, and its defeat will depend on the East-West trade record in the interim.

Partisan propaganda on both sides is not the only reason for general confusion. The issue is vastly complicated and contradictory because actually it is not one problem but several, and because solutions vary from

country to country and from one period to another.

In theory there is no argument about shutting off strategic or war-usable exports from Allied countries to Red countries. The disagreement begins when you define strategic materials and enforce the ban.

There is a case like Austria, which the United States is keeping alive by subsidies. It is impossible to stop Russia from getting war materials there, because the most important part of the country is under Soviet military occupation and the majority of industries and materials under Soviet control. The country as an economic unit cannot exist without a constant and fairly complete trade flow back and forth between its interdependent parts. Abuses are hard to prevent.

Then there is the bulk of West European exports to Red countries in exchange for eastern grain, meat, timber, and coal. Those essentials must come from Red countries or from America. Even if we had enough to spare, and there was no dollar exchange problem, there are not enough ships available.

It is agreed that the Allies should not export weapons to Red countries; but what about machinery and chemicals, two of the biggest export items? When are machine tools or rubber or oil war materials, and when are they not?

About 10 percent of the American embargo-list items are not banned by other allies.

That is the point at which tighter Allied control is needed, and stricter enforcement.

Retirement of Gen. George C. Marshall as Secretary of Defense and Appointment of Robert A. Lovett

EXTENSION OF REMARKS OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, September 13, 1951

Mr. MOODY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Thou Good and Faithful Servant," which appeared in the Washington Star today, paying tribute to a great American and his distinguished successor, Robert A. Lovett.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOU GOOD AND FAITHFUL SERVANT

To General Marshall's admirers, and he has won a deep and abiding place in the hearts of his countrymen, the news of his resignation as Secretary of Defense is good news. For he has been called on to do more than it is reasonable to expect of any man. Like everything else he was ever called on to do, he has served with distinction during the year that has elapsed since he was plucked out of retirement and put in charge, once more, of rebuilding the Nation's defenses. And it is well that he leaves office now in good health, conscious of another task discharged with honor and with another fine chapter added to a remarkable record of accomplishment.

In his successor, the President has made a selection that was plainly in the cards when he persuaded another veteran, Robert A. Lovett, to return to Government service in September of 1950 as Under Secretary of De-

fense who is better qualified by experience and outstanding ability. That was what General Marshall and the President were thinking about when they called Mr. Lovett back to Washington last fall and persuaded this No. 1 man to take a No. 2 job for the time being.

One of the things that happened to General Marshall—as it must to all men who serve in high places—was that this past tour of a return to duty brought out, for the first time in his career, a little group of questioners of his good faith who were highly critical, in their own way, of the man selected as a target for their attack. It is a measure of his own stature that nothing made them appear quite so small as attacking General Marshall.

A 10-Year Tax Plan

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. MASON. Mr. Speaker, the following 10-year tax plan by Samuel J. Foosaner is a plan based upon projecting our national budgetary needs and our anticipated national income. It is a plan worthy of serious consideration by the Ways and Means Committee in connection with our present and proposed confiscatory Federal tax rates, and in connection with any proposal to impose a constitutional limitation upon Federal tax rates. The following is a brief exposition of the Foosaner proposal:

TEN-YEAR TAX PLAN

A plan which would provide a financial blueprint for our Federal Government for the next 10 years, is now under consideration. The 10-year tax plan which was first proposed by Samuel J. Foosaner, Newark, N. J., tax attorney, and former chairman of the Federal Tax Lawyers Committee, to the House Ways and Means Committee on February 16, 1951, seeks to lay a pattern in Federal tax planning and to chart a general course in national fiscal policies.

Citing the fact that with each successive year our population increases and so does our total national income, making more tax dollars available, Mr. Foosaner urges that "each taxable year should be subjected to taxes in accordance with its ability to pay."

TEN-YEAR PLAN DESCRIBED

The essential steps which would be entailed in the proposed 10-year tax program are as follows:

1. Estimate the Federal expenditures for the period from July 1, 1951, to June 30, 1961.
2. Estimate the probable national income for the same period.
3. Equitably apportion the tax load over the period from July 1, 1951, to June 30, 1961.

Within the purview of the above tax plan, the deficit of 1 year would be offset by the surplus revenue collections of another.

Here is how the plan would work. Assume, after full pruning of all expense items except the absolute essentials, our budgetary requirements for the 10-year period from July 1, 1951, to June 30, 1961, were estimated at \$600,000,000,000. If the history of the last 10 years repeats itself the national income will increase from year to year, with the possible exception of small drop-back in 2 or 3 years. With this pattern in mind, let us assume that the national income is

\$280,000,000,000 for the fiscal year ending June 30, 1952, and thereafter, there is an average increase of \$20,000,000,000 a year to 1961. Conjecturing a drop-back of \$10,000,000,000 in each of 3 years (say 1955-56 and 1959), the total estimated national income for the 10-year period will amount to three trillion three hundred and ten billion dollars (\$3,310,000,000,000.)

Instead of piling taxes in 1 year to meet the defense costs of other years between now and June 30, 1961, the \$600,000,000,000 required by the Government would be met by taxes in accordance with the taxable year's ability to pay. Illustratively, since the estimated national income for the fiscal year ending June 30, 1953, is \$300,000,000,000, and this represents approximately 9 percent of the total anticipated national income for the entire 10-year period, the total tax requirement for that year would be 9 percent of \$600,000,000,000 or \$54,000,000,000.

The national income for the fiscal year ending June 30, 1954, having been conjectured at \$320,000,000,000, or somewhat less than 10 percent of the conjectured total income for the 10-year period, the taxes to be collected for that year would be approximately \$58,000,000,000.

If the above assumption of \$600,000,000,000 is determined to be too low for the 10-year period from July 1, 1951, to June 30, 1961, it can be increased. It is merely necessary to apply the same formula to the higher figure. Thus, if after preliminary study, or upon subsequent modification, it appears that \$700,000,000,000, for example, will be necessary, then, in such event, each taxable year will be required to produce its percentage of taxes on the \$700,000,000,000 figure.

In advocating the 10-year-tax plan, Mr. Foosaner has argued that Congress must decide upon a budgetary program which parallels our defense planning. He contends that those who know, have clearly indicated that the security program which we have cut out for ourselves will cover a period of at least 10 years, and emphasizes that our tax planning must go hand in hand with this security program. He recognizes that there must be some conjecture in endeavoring to anticipate budgetary needs and national income for a 10-year period, and states that, "while, as a practical matter, it will not be expected to enact tax legislation to stand indefinitely without change, modification, or adjustment, nevertheless, Congress is capable of chartering a general course."

In pointing out that the American population will increase to approximately 180,000,000 people in the next 10 years with a corresponding increase in taxpayers, he asks: "Why should five taxpayers today, pay the tax bill which will have to be paid by six taxpayers 10 years from today?"

In stressing the dire necessity for longer range tax planning, Mr. Foosaner cites the fact that the American taxpayer has been subjected to one tax blitz after another, and relates that tax blitzes are most damaging to the nervous system. He adds:

"The Federal tax laws are very complicated. No set pattern is followed, no definite tax planning is pursued. The average businessman has no way of telling in what direction our Government is headed, from the standpoint of Federal taxation. Whether he operates as a sole proprietor, as a partnership, or as a corporation, it is almost impossible for him to make intelligent financial plans in his own business. How can he do so, when he does not know just what portion of his profits, if, in fact, his business earns profits, will have to be paid out in taxes?"

HIGH TAXES NOT COUNTERINFLATIONARY

When he appeared before the Senate Finance Committee on July 10, 1951, regarding the 10-year tax plan, and in opposition to increased taxation at this time, Mr. Foosaner argued that high taxes constituted the greatest stimulus to increasing inflation that Congress could provide. He stated that

in periods of exceedingly high taxation, taxpayers undertake many business expenditures primarily motivated by the knowledge that the net cost to them will only be a fraction of each dollar spent. Businessmen who are subjected to high taxes, whether operating as sole proprietors, members of a partnership, or under the corporate form, spend money which they can deduct for tax purposes which they would not otherwise spend. In this way, they feed the flames of inflation. Our experience in the last war proved this beyond a doubt. There wasn't a corporation in the country in the excess-profits tax bracket which did not spend money which it would not have otherwise spent, except for the fact it was putting out 1 1/4-cent dollars.

TAX CREDITS

In order to get the 10-year tax plan under way and yet at the same time not deprive the Government of needed funds for extraordinary military expenditures for the next 2 to 3 years, Foosaner would resort to tax credits. He would fix tax rates at their present levels without increases, and, to the extent that Congress determines additional revenue must be collected from taxpayers, he would have them make these additional payments. Instead of these levies constituting additional taxes, however, they would in reality be loans to the Government on a non-interest-bearing basis. Credits would be issued to the taxpayer. These credits would then be usable by the taxpayer in any taxable year beginning after December 31, 1953, against any Federal income, estate, or gift taxes which such taxpayer may owe during the ensuing 10-year period.

Foosaner asserts that by using the tax credits the Treasury would be able to collect the extra revenue it will need for the next 2 years. At the same time, inflationary spending would be curbed. Since taxes themselves would not be increased, taxpayers would be less apt to undertake expenditures not otherwise contemplated. They would be spending their own money, and this makes a difference.

Taking cognizance of the fact that the 1951 Revenue Act involves new tax increases, Foosaner contends that this should not prevent adoption of the longer-range tax plan.

"There is nothing to preclude Congress from giving the proposed tax credits for the additional income-tax sums which will be collected under the 1951 revenue law. At the same time the details of the 10-year tax plan can be worked out with a view to its early acceptance. This plan," he added, "will put our country on a cash-paying basis, not for 2 or 3 years, but rather for the full period of our defense preparation and emergency program."

TABLE A.—National income and taxes paid, 1939-50

	National income ¹	Amount of taxes paid ²
	Billions	Billions
1939.....	\$72.5	\$5.5
1940.....	81.3	5.7
1941.....	103.8	7.8

The United States Cannot Take Economic Action Against Czechoslovakia

REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BURDICK. Mr. Speaker, the only method we have, short of war, to release an American citizen from the prison in Czechoslovakia is to apply economic measures—cut off trade. But lo and behold, we cannot do it. Are we a sovereign Nation and have we a will of our own? No, sir; we lost that when we joined the United Nations. Now we cannot use any economic power against Czechoslovakia until we get consent from the United Nations. Is not that a nice position for this great country to be in?

There seems no end to the multitude of side organizations of the United Nations. Something new is popping up every day. The President himself has just been met by what one of these branches or subsidiaries did. In time he is bound to meet other actions that have been taken against the sovereignty of the United States. In the present case the President wants to do all the can, short of war, to get Oatis, the American newspaper correspondent, out of the dungeon in Czechoslovakia. He decided that the best way to do it was to shut off all trade with that country. Any sovereign nation has that right if it chooses to exercise it. But the United States cannot do it, and you ask why we cannot exercise our own rights as a Nation. I will tell you why.

In 1947 the United States along with 29 other nations representing the Trade and Commerce Committee of the United Nations, met and entered into an agreement called the general agreement on trade and tariffs, now known as GATT. This outfit is one of the myriad side organizations of the United Nations. In that agreement we bound ourselves to trade with nations, including Czechoslovakia, and we can't get out of this trap unless two-thirds of the nations with

whom we agreed will let us out. The President is stymied on the course of action he would like and ought to pursue. If we take this matter up and attempt to extricate ourselves, we will not be successful, because the majority of the people represented in the United Nations are following the communistic line. Then what is to be done?

When this agreement was made under the authority of the Secretary of State it clearly was an unconstitutional act because control over commerce and tariffs of this Nation is solely controlled by the Congress of the United States. Here we have a case where the Secretary of State and his cohorts have attempted to bypass Congress and set at defiance the laws of the United States. I propose that we get out of this organization immediately, declare the agreement null and void, notify the United Nations of the action, and then go on about our own business. To this end I have introduced a concurrent resolution to accomplish this purpose.

This action in overriding Congress on our trade and tariff laws is just one of the many schemes that this communistic-dominated United Nations is conjuring up day after day.

And what kind of people are represented in the United Nations?

Here is the composition: 488,000,000 people who believe in the capitalistic theory of government, and 560,000,000 who follow the Communist line—and that does not include Red China. If she were admitted we would be outnumbered two to one. India, Poland, Yugoslavia, and Russia are the stumbling blocks in that organization now. Yugoslavia is a Communist country and refrains from voting, but those who are not with us are against us.

Do we want any social programs emanating from that organization? Do we want to train our children to fit into a social group instead of preparing them for lives of individuals, with all the hopes and aspirations of freemen?

Do we want laws offered by that organization? Do we want to practice deceit and falsehood in order to prepare our citizens to accept the United Nations laws?

The Universal Declaration of Human Rights document that has been printed and circulated by the millions among our churches and schools is a dishonest attempt to prepare the people of the United States to accept the Covenant of Human Rights, soon to come before the Senate for ratification.

This Universal Declaration of Human Rights document is not the same document that the Communists of the United Nations want us to adopt. The two sound much alike. One is labeled "The Universal Declaration of Human Rights." The other is the Universal Covenant of Human Rights.

In the first, it would appear the free speech and a free press are protected. But see what the second document says about free speech. Here it is:

Everyone shall have the right to freedom of expression, subject to such restrictions as are provided by law or are necessary for the

protection of national security, public order, safety, health, or morals, or the rights, freedoms, or reputations of others.

In the first, freedom of religion seems to be protected, but see what the second one says about religion. Here it is:

Freedom to manifest one's religion or beliefs shall be subject only to such limitations as are pursuant to law and are reasonable and necessary to protect public safety, order, health, or morals, or the fundamental rights and freedoms of others.

If a question of free speech and a free press comes up, under this definition, with all its exceptions, who is judge of the exceptions? The answer is, "The United Nations Court." Whatever it says will govern a free people in the United States. Who will judge whether a newspaper is guilty of a violation of this definition? The United Nations Court. Is that what the people of this republic want? We have always guarded this clause in our Constitution, and are we to surrender it all to a communistic United Nations?

If a question of religious practice comes up, who is the judge of all the exceptions noted in the definition of religious freedom? The United Nations will do the judging, not us. Is that what the people of the United States want? This country was settled by those who felt the heavy hand of religious intolerance. We grew to greatness, among other things, because of our liberality in religion. Are we to surrender this precious right to a communistic United Nations?

In pointing out some of the results which would follow the adoption of this provision contained in the Universal Covenant of Human Rights, the Committee for Peace and Law through the United Nations of the American Bar Association said in a report last September 20, the effects would be these:

The persecuted brethren of any religious group in any country dominated by the Soviet shall be assured that such persecutions are legal and proper under a covenant on human rights because the public safety and order of their state demand such protective action. Is this the message we shall send to persecuted worshippers in other lands?

Today when an atheistic ideology of great power and proportions confronts the religious groups of the world, an organ of the United Nations presents the doctrine of state regulation of religion, a codification of the right of regulation, and complete destruction of the freedom of religion if laws based on alleged public safety and order of the state shall so provide.

If the Communists in the United Nations and the Communists—or half-Communists—here in the United States can put over this Covenant of Human Rights, there will be no free speech and no free press; there will be no free religion.

I think our representatives in the United Nations should be investigated. I have a suspicion that it is teeming with Communist sympathizers.

Alger Hiss was secretary of the United Nations when it was organized. He spent more time than any other person in framing the charter. The Senate thought everything was all right and the charter was approved. What happened? The very first thing we noticed was that

the United Nations Charter had become the supreme law of the land—and in that Charter there is a provision that came in conflict with a law of the State of California. The case went to the circuit court of appeals and that court held that the Charter of the United Nations is the supreme law of this land, and therefore the California law was set aside.

Do you not think we should look with suspicion on that whole outfit? That same Charter comes up again right now in our controversy with Czechoslovakia. We cannot handle our own business without first asking the august, Communist-dominated United Nations to please give us the authority to act. The greatest nation on earth, kneeling before a Communist-dominated debating club.

I am trying to get a list of all the employees of the United Nations who are citizens of this country. If I can get it, I will ask the Attorney General to put the FBI on the job and see if our own citizens are at work trying to destroy our form of government.

My statement is this—and I ask no congressional immunity—that our representatives in the United Nations are either powerless to cope with the Communist elements or they are deliberately cooperating with Communists to change our form of government, or they are too ignorant to understand what they are doing, and they should be removed.

I am not speaking to snipe at the administration. I am speaking as an American who will make any sacrifice to preserve this Republic.

We have undertaken to stop the Communists in Korea, but we would have made better progress if we had first stopped the Communists in the United Nations. This would be easy to do if we had nerve enough to do it. Throw out the Communists. Or, if that is impossible, get out ourselves. In my judgment this should have been done long ago, and could have been done if our representatives had shown any inclination that way, and had the courage to back it up.

By abjectly bowing to the wishes of the United Nations and having representatives in it who have not stood up for the sovereignty of the United States, we have gone farther along the road to the destruction of this Republic than ever seemed possible. We have surrendered our State laws; we have surrendered our control over tariffs and trade; we are in the process of seeing our jurisdiction over criminal cases surreptitiously slid over to the United Nations.

We have seen our way of education attacked, and are boldly told that the child must be fitted for life in a consolidated social group instead of being schooled as individuals with all the hopes and aspiration of free men; we are witnessing our control over narcotics being transferred to the United Nations.

I hope we are not too late in arousing the people to action. Many millions of our people talk peace, peace. But peace at the price of the destruction of this Republic is not peace. The power of the Russians and the atomic bomb have been purposely exaggerated to scare the

people. Russia could no more land her forces in this country than I could fly to the moon without wings. If Russia has the atomic bomb, let her use it. We are ready. A few people will be killed, but not as many as we shall lose in fighting all over the world at our own expense in men and money.

We have come to the point where we have two enemies to fight—the Communists outside the United Nations and the Communists inside that organization.

After mature reflection, my advice to the people of these United States is—

Prepare our own defenses. Fight for no one who is not willing to fight for himself. It would be much better to have 6 nations lined up for the defense of democracy than to have 60 of them, 44 of which do nothing, contribute nothing, but still demand that we tax our people to make life easy for them. When the British cannot balance what they call the "boojet," they ask us for money—and they get it. Our own budget is never considered. Our tax burden is fast becoming insupportable—confiscatory.

I say to the people of the United States, "Stand up for this country—at least once." There is just one question the people of the United States must settle: Is the Congress of the United States working for the people of this country to preserve our liberties, or are we to sit here like stool pigeons and see this Republic undermined and destroyed? That question can be answered by the people at the next election.

Speech by Mr. J. P. Cullen, Manager, Veterans' Administration Regional Office, Milwaukee, Wis.

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I include the following speech delivered June 29, 1951, by Mr. J. P. Cullen, manager, Veterans' Administration regional office, Milwaukee, Wis., at the annual encampment of the Department of Wisconsin, Veterans of Foreign Wars of the United States, Manitowoc, Wis.:

I appreciate this opportunity of attending the department encampment with members of our staff. To me, your organization and your 51 years of existence exemplify one of the finest of loyal and patriotic traditions, representing as you do those in active service beyond the seas, and foreign service veterans of the Army, the Navy, and the Marine Corps, the Coast Guard and the Air Force. And for the past 30 years, during which the Veterans' Bureau was established in 1921 and the Veterans' Administration came into being in 1930, the Veterans of Foreign Wars organization has marched with our own in progress and strength, shoulder to shoulder in a common cause; service to the veteran, to his widow and to his orphan. May I please express here, for our office, my appreciation of

your cooperation always evidenced during the past year by Commander Roang, the close relationship of our business dealings in the person of Col. Les Myers and his staff, and the patience and sociability manifested by all of you.

In recent months we may well have puzzled over the scoops in the daily press and articles in magazine publications obviously designed to startle and surprise us, these having behind them the movement of forces apparently contrary to our common cause. What is happening to the fine traditions which embodied a decent respect for the war veterans of our Nation and for the institutions established to uphold their dignity as citizens, their rights to rehabilitation, and their rights to care for their dependents? These scoops and scarehead articles seem not to be flavored with the traditional and homely aroma formerly to be found in the accounts of the men and women who fought our wars, and how their wounds are to be healed. Here in our grand and fertile State of Wisconsin we have a homeland that has, at all times when our Nation called, given generously, nobly, and unselfishly of her sons and daughters, of the fruits of her soil and of the products of her factories. If we may be historical, may we look back four score and eight years ago, to recall what was taking place just west of a little town in southern Pennsylvania. Here on the morning of July 1, 1863, unfolded the first act of one of the world's most decisive battles. Here the Iron Brigade, including the Second, Sixth, and Seventh Wisconsin Infantry, was coming in on the double to the relief of the gallant Buford, who with his cavalry division and his mounted batteries had held off the invading Confederates since early forenoon. The Iron Brigade outflanked the Confederate right and with the suddenness and determination for which it was famous, surrounded and captured nearly all of Archer's Brigade, including its commander, the first of Lee's general officers captured on a battlefield since he assumed command of the Army of Northern Virginia. The Iron Brigade fought on, through that first day's fight and through the second and third days of the battle and suffered the highest casualties, in proportion to its strength, of any Union brigade in the entire war. Nearly all its officers, including General Meredith, were wounded, killed, or captured. The commanding officer of the Sixth Regiment, Col. Rufus Dawes, of Mauston, in Juneau County, father of the late Gen. Charles G. Dawes, of Chicago, was one of the two or three commissioned officers to come out unscathed. Had it not been for these brave men and their comrades of the First Corps, Gettysburg, which was most strategically located, would have been lost that first morning and Lee's vision of open roads to Harrisburg, Baltimore, and Philadelphia would have become (for the North) a terrifying and tragic reality.

May we not forget that the sons and grandsons of the men of the Iron Brigade carried on the glorious tradition of the Wisconsin fighting man 55 years later at Hill 230, Juvigny and the Argonne, and again in 1942 in the foxholes of Bataan, the blistering sands of Buna Beach, and the choking jungles of New Guinea.

These are but a few, notable as they are, of the valorous phases of Wisconsin's patriotic tradition down through our country's wars. You and we, in the important work we are charged with, must not forget this fine tradition when we know there are now forces abroad which could destroy the memory of all that was good and noble in the past, warp our concept of the present, and cloud our vision of the future.

What must our younger veterans think when they read of, and this is not fiction, I quote: "The scandalous days of the Hines' regime," meaning the period when Gen.

Frank T. Hines was in charge of the Veterans' Administration, the years 1923 to 1945. I wonder if they believe, as such articles baldly state, that our doctors and lawyers were devoid of professional ability or ethics, were broken down quacks and ex-ambulance chasers?

Last week, in Chicago, I saw a physician who has been a consultant with the Veterans' Administration for over 20 years. He is a well-known eye specialist, who, once a week still makes the 15-mile trek from his office in the Loop to Hines Hospital. He has been, in his private practice, treating my 10-year-old son for the past 7 years and successfully performed operations on both eyes. Ten years ago when I was stationed at Hines, many of us went to this doctor with our eye troubles and took our families to him. Why? Because he is a good physician, besides being a fine, unselfish person. He is still Consultant in Ophthalmology at Hines Hospital, which, incidentally, has always been one of our largest hospitals. He has not changed except as productive, unselfish experience further develops a professional man or woman. I could name other physicians on the staff there—I know them all, or knew of their worth and ability, their reputations in the medical profession, and I include the full-time Veterans' Administration physicians stationed at Hines—surgeons, orthopedists, internists, psychiatrists. This fact of good medical care I cite from personal knowledge and experience. It could be attested to with respect to other hospitals and areas by those who were elsewhere.

So take these accounts of the terrible state of Veterans' Administration medicine back there—take them with a grain of the familiar white condiment. It's good on the meat we eat—when we can get meat these days—and it's also good to sprinkle on these articles and reports that profess to tell you what scandalous people we used to be and what a shambles we worked in.

Now the lawyers—I studied law myself—and entered the old Veterans' Bureau direct from college, even before I took the bar, though maybe I leaned on a couple along the way. That will be 29 years ago next month. I can't compare it with the famous Gettysburg date, but sometimes I feel that old. Why does the Veterans' Administration need lawyers anyway? Congress says we have too many Government lawyers and the outside experts say they get too much money; that we should give it back to the taxpayer or better, pay it over as fees to these experts who can save our Nation from bureaucracy. Well anyway, we do have lawyers in our office down in Milwaukee. One thing any lawyer, and especially ours, must know is the value of evidence, and how and where it comes from, and where the veteran or his VFW representative may find it if it isn't there in the case file. A claim has to be supported by good evidence and we are required to support the pay vouchers with facts. We don't have to prove a claim to a mathematical certainty, or rather the veteran and his representative need not, and we must give the veteran the benefit of reasonable doubt. All these things, in our opinion and that of the Federal Civil Service, require education, experience, and background. We seriously believe that a veteran's claim or a widow's claim is an important piece of business, important enough to be handled by experts, by competent doctors and qualified lawyers sitting together on the boards, passing on these claims with mature deliberation.

Suppose we don't have them—that kind of board members—and suppose we go wrong—and that would happen I assure you with the wrong kind of personnel. Well, we go wrong and we turn down the claim of a veteran who deserves, on evidence which is good, favorable action. That decision may very well ruin him, not only thwart his ambition, his

aims, but sink him and his family into depths of despair and frustration from which he may never emerge. We can hardly estimate the extent of such a wrong in dollars and cents. Now let's say we, with this same kind of people making the decision, go wrong the opposite way, on the other kind of claim with its bad evidence, and pay off a gold brick or a malingerer. We don't have many, but rare or not, it takes a smarter man than any old guardhouse lawyer to spot them. So we pay off. We can easily figure 20—30, yes even 40 years of longevity—these fellows often have a long and happy life—and let's say at a thousand a year, that's a fair guess. It adds up to \$40,000—that's a lot of money to pay out on a fraudulent claim. As taxpayers we wouldn't like it because that money comes out of your pockets and mine.

Yet there are those who have been saying for years, "You don't need college-educated, experienced men and women, technical experts to make these decisions. Properly trained clerks can make them and at half the salaries." I suggest you take that one with a grain of salt, too.

May I pose an answer to the question of success and efficiency in any operation or reorganization, any business, whether it be a white-collar job, running a threshing rig, or running a 500-bed hospital. Get a good man to run the job, give him authority as well as responsibility, then leave him alone while he runs it.

Authority and responsibility after you get the right man. That's the key to it. Responsibility without authority is the curse of any important job. Thousands of dollars in reorganization schemes have and are being spent to discover that simple answer. It is not original. Teddy Roosevelt came up with it 40 years ago.

One of your very fine leaders in your national office, Col. George E. Ijams, director of your National Rehabilitation Service, was with the Veterans' Bureau and Veterans' Administration for many years. I know him well and I worked under him in Washington. Then he was in charge of claims and insurance and later he was assistant administrator charged with the responsibility for medical and hospital activities, as well as construction and supplies. He could enlarge on my story here. He has really been there and he knows the answers. He knows what the medical care was during the Hines regime because he was in charge of it and he knows how claims must be handled in order to be fair to all. He had a lot to do with our acquiring our fine building in Milwaukee and one of his last acts was in that connection, a wire calling me to Washington, early in 1946, just before he left the Veterans' Administration. The VFW is fortunate in having George Ijams, a thorough gentleman and one of the most capable administrators, combining as he does long and productive experience in our agency, and possessing a full understanding and experience with the aims and principles of the VFW. If he were here I think he would agree to what I have said about the tradition in respect to physicians and lawyers in the Veterans' Administration, that most of them were doing their job to the best of their talents and ability during his tenure and they are doing it now, together with the vast new group of personnel that has come in since World War II.

This tradition of competent medical care and the fair and impartial consideration of disability claims lives on, among us who know the facts, and we all may well hope it will continue, in spite of adverse press and publicity, along with your fine, loyal tradition of half a century of service, comradeship and patriotic ideals. Let's keep our traditions alive; we have a very fine relationship in our State, working together as we do, and let's not forget our common cause, untiring and unremitting service to

the veteran, to his widow, and to his orphan. With the help of God we can continue to serve them well. There is no nobler cause to which we can devote our energy, our experience, and our sincere sympathy. Thank you.

**Address of Hon. William Jennings Bryan
Dorn, of South Carolina**

**EXTENSION OF REMARKS
OF**

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of Hon. WILLIAM JENNINGS BRYAN DORN, of South Carolina, to the graduating class of the Page School on June 11, 1951, in the Ways and Means Committee room in the New House Office Building:

Mr. President, members of the graduating class, ladies and gentlemen, I consider it a great honor to have been invited by the members of this class to make the address in this occasion. It is a genuine pleasure to participate in these exercises on this memorable night in the lives of these young men.

Members of the graduating class, this is a serious hour in the history of America, and a critical period in your own lives. I would suggest to you, and to the youth throughout the land, that you set a goal in life—a goal toward which you must constantly strive. The earlier we set for ourselves a goal of accomplishment, the more likely will be our chances of success.

I remember hearing a story about a young boy who was employed as a carpenter in the new building which was to be the meeting place of the Supreme Court of Oklahoma. This young lad was observed by his foreman to put forth special interest in the chair in which was to sit the chief justice of the supreme court. The foreman asked this young boy, still in his teens, why he spent so much time on this particular chair. The lad replied, "Someday I will sit in this chair as the chief justice of this State." Years later this young man did become the chief justice of the supreme court in the great State of Oklahoma. He set for himself, early in life, a high goal and worked toward that end. It is no small wonder that his ambition was crowned with ultimate success.

I hope the youth of America today, seeing the shortcomings of this generation, will set for themselves the goal of rectifying the chaos we find in the world today. I hope you young men, in facing the menace of foreign ideologies and "isms" which would enslave the world, will be bold and aggressive, and that you will have no fear. The foreign policy of our great country tonight seems to be predicted on what Russia might or might not do. Fear hysteria is sweeping the country. Fear cannot solve the problems of this great Nation.

The Bible says the things which we greatly fear will come upon us. As you face the future, with its stupendous task of arriving at lasting peace, I know you will face those tasks with the same type of fortitude that our forefathers had when they founded the early American Republic. They were afraid of nothing, except to do wrong.

The motto of the late Alexander H. Stephens, of Georgia, is found on the monument

at his resting place in Crawfordville, Georgia. This motto reads: "I am afraid of nothing on the earth, under the earth, or above the earth, except to do wrong. In the path of duty I shall ever endeavor to walk, fearing no evil and dreading no consequences." And what a wonderful motto that would be for the youth of America today.

France and England, in the years preceding World War II, contributed to the outbreak of that war by being afraid to stand on principle and back up the little nations who desired freedom. They were, by their policy of fear and appeasement, just as guilty of starting the war as were the aggressor nations. A bold, determined stand by these two nations for righteousness and the sanctities of treaties in 1938 could have prevented World War II. Whenever any nation surrenders principle for a temporary respite or fleeting expedient that nation later will pay a terrible price in blood.

America has reached the coveted position it occupies in the world today because of its belief in God and in freedom of opportunity. Our forefathers were builders. They gave us, on a silver platter, this land as we know it today. We have the highest standard of living any people in world history have ever enjoyed. Our educational systems are comparable to those of any other nation. The masses in America have a far greater opportunity for an education than those of any other nation.

When I was in the Far East in April, I was told that 83 percent of the Chinese people are illiterate, that eighty-plus percent of the people of India are illiterate—they cannot read or write. Our literacy rate, in America, is higher than the illiteracy rate of these two countries.

I enjoy living in America. I am proud of my American citizenship. We should be grateful to God and the founding fathers of our Republic for the great America we see every day. No civilization has ever excelled ours in religious tolerance or freedom from class hatred. Minority races of people have advanced further here than in any other country. Strong moral and spiritual beliefs have always placed our Nation on the side of right and principle as opposed to tyranny and oppression. Our democratic form of government has created an American citizen who is tolerant, self-reliant, intelligent, and conscious of his rights and the rights of others.

The American system of free enterprise has given to the American people more automobiles, television sets, more telephones, more washing machines, more of the luxuries of life than all the rest of the people on this globe combined. Think of it—150,000,000 people have more of these modern conveniences than all the other 2,000,000,000 people in the world. This is a tribute to our democratic way of life, to our free-enterprise system, and to the individualism of the American people. We cannot maintain this great era of accomplishments by tearing down or by socializing the system which has made this era possible. The youth of our Nation must work, in the years ahead, to guarantee the preservation of our system of government with its equal opportunities.

Booker T. Washington was born a slave in Virginia. Never knowing who his father was, he went from that humble beginning to establish Tuskegee Institute, one of America's greatest colleges today. I visited this college, in the "black belt" of Alabama, not long ago. It is a monument to the character and perseverance of Booker T. Washington. He could have accomplished this only in the United States.

Abraham Lincoln was born in a one-room log cabin in the backwoods of Kentucky. With little formal education, he gradually ascended the ladder of fame. He was defeated for Congress and for the United States Senate. He did not become disillusioned

and embittered. Instead he continued onward and became the President of the United States.

Alfred E. Smith was born in the East Side of New York City. He worked in the fish markets and, as he grew up, saw little of the world except the slum sections of that great city. But Al Smith was four times elected Governor of New York State and was the Democratic standard bearer for the Presidency in 1928.

Immorality in government and among the American people is today posing as a great threat to true democracy. This threat is paralleled by complacency and indifference on the part of the American people. If we are to preserve democracy, we must use democracy. If freedom is to grow, we must use that freedom.

In 1948, 93,000,000 Americans were eligible to vote in the Presidential election. Only approximately 47,000,000 voted. Forty-six million did not vote at all. They did not evidence enough interest to exercise the sacred privilege of casting their ballot for whomever they pleased.

How many people today exercise the privilege of publicly stating their views on the state of the Nation? One-half of the American people are members of no church of any denomination whatsoever. Yet, America was founded and has prospered on Christian principles and a belief in God.

I do pay special tribute tonight to the press and radio for exercising the sacred privilege to write and discuss the things which they believe.

If any man, woman, or child in this audience tonight were to go home, get in bed, and lie flat on your back for a year without exercising the limbs, you would lose the use of arms and legs. We maintain the physical limbs of our body by constant use and exercise. So it is with the "four freedoms" and our democratic way of life. If we do not use them, we will surely lose these sacred privileges.

You members of this graduating class, as you face the many problems of today, are probably thinking of the obstacles of seniority. You are probably thinking that you will have to wait many years before you can serve your community, your State, or your Nation. You are probably thinking that youth and lack of experience will be a stumbling block.

Remember the words of Benjamin Franklin. "Fools learn by experience; wise men through the experience of others." In the fourth chapter of First Timothy, the twelfth verse, we find these words: "Let no man despise thy youth." These words are taken from Paul's letter advising the young minister, Timothy, as he went out into the world of men. Youth is your greatest asset. You have all the history of the past centuries to draw from. If in this modern age, with its libraries and great teachers, we have to learn in the bitter school of experience, then we are indeed very foolish. If we must put our hand in the fire to learn, by experience, that we will be burned, then we are what Benjamin Franklin said of those who learn by experience—very foolish indeed. We can turn back through the pages of history, or we can look at our contemporaries in the various fields of endeavor and find that youth has played an important role.

I am thinking tonight of scientific advancements. The men who made the atomic bomb were but little older than you who sit in this graduating class tonight. The average age of the members of the American Association of Atomic Scientists is 29 years.

Let us turn to the field of literature. William Cullen Bryant began writing poetry at an early age and wrote until he was past 80. Yet the greatest poem he ever wrote was *Thanatopsis*, written at the early age of 17. Byron, Keats, and Shelley, of England,

were all young men when they wrote their masterpieces.

In the realm of government and politics, William Pitt was Prime Minister of Great Britain at the age of 24. He is acclaimed by most historians as the greatest Prime Minister Britain ever had, greater even than Winston Churchill. William Pitt saved England in the great Napoleonic era of world conflagration.

In America, Thomas Jefferson wrote the Declaration of Independence when he was 33 years of age. Alexander Hamilton, the father of the American currency and one of the founders of the American Constitution, was adjutant to Gen. George Washington at the age of 20 and helped to plan the campaigns which made this country independent. Madison and Monroe were both young men when they fought for the American Constitution. John C. Calhoun, who once represented the district it is now my honor to represent in Congress, was elected to the House of Representatives at the age of 28 and in a few months was one of the outstanding leaders of the country. Henry Clay was United States Senator at the age of 29. A few years later on the same day he took his oath of office as a Member of the House of Representatives. He was elected Speaker of the House, at the age of 34.

In the field of music, Mozart was playing publicly at the age of 6 and composed his first symphony at the age of 9.

In military science and tactics, the greatest generals the world has ever produced were young men, little older than you. Alexander the Great conquered the world before he was 33 years old. Napoleon Bonaparte was a lieutenant general at the age of 27, and dominated Europe at the age of 31. Hannibal was commander of the Carthaginian Army in Spain when he was 25. Gustavus Adolphus was commander of the Norwegian Army at the age of 19. These four men are credited by most historians as being the greatest military generals of all times. They were at their best when they combined their great intellect with the vigor and imagination of youth.

The members of this graduating class are all young men—but we must not forget the ladies. Joan of Arc was a French leader while in her teens. Florence Nightingale also made great accomplishments early in life.

Jesus Christ hung on Calvary's cross at the age of 33, after He had started a movement which is still growing today and has hundreds of millions in its ranks. And today a young evangelist in America—Billy Graham at the age of 32—has won hundreds of thousands of Americans to the cause of Christianity.

We are never too old nor too young to serve our country. Let no man ridicule you for your youth.

I hope you will pardon this personal reference. I received no encouragement when I ran for the legislature of my State of South Carolina at the age of 22, but the people of my county elected me. Two years later, at the age of 24, I received no encouragement when I ran for the State senate, but I was elected over two opponents. I was advised by many not to run for Congress in 1946 because I was what they termed too young, but still the people elected me to the House of Representatives.

Let us not be discouraged by the cynics and those who would have us wait while America may be passing through its hour of greatest danger. Our country needs us today. Tomorrow may be too late. The past generation has failed to give us, the youth of today, the peace that they promised, the security that was to be ours. Let us not make the same mistake and pass on to the next generation a world of chaos, of war, of fear, and of apprehension. We must act now, before it

is too late, to save our country in this hour of crisis.

A story is told of Napoleon Bonaparte when he was being defeated by the Austrians at the Battle of Austerlitz. He had done his best and defeat was staring him in the face. As his veterans fell back in disorder, he rode up to a little fourteen-year-old drummer boy, and the great general said, "Son, beat a retreat." The little boy looked up at his great commander and said, "Sir, I don't know how. You never taught me how to beat a retreat. But, sir, I can beat a charge on this drum that will wake the dead on this battlefield." Napoleon thought for a moment and then said, "Beat it then." The old guard, seeing the courage of this little boy and hearing his stirring notes on the drum, rallied and won for Bonaparte the greatest victory in French history.

The great minds of America may fail to solve the present-day problems. Just remember the great general Bonaparte and all of his commanders had given up that day in the Battle of Austerlitz, only to see defeat turned into a great victory by a fourteen-year-old lad. The youth of America today, like the little drummer boy, might save this country after our leaders have done their utmost.

I wish you great success in the years ahead. May you serve your community, your State and your Nation as well as yourselves and your families. God bless you, each of you.

Stones for Bread?

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. DELANEY. Mr. Speaker, in the course of the investigation of the use of chemicals in food products, carried on by a select committee authorized by this and the previous Congress, I have read, or heard, as chairman, the testimony of many nationally known experts on nutrition. Many of the scientists who testified before the select committee have devoted their lives to finding new methods of preserving the natural values and purity of food. Some of these scientists, experts on nutrition, have developed recipes for baking pure, wholesome bread filled with natural ingredients and free of chemical additives.

In support of this expert testimony I was gratified to note an article on the merits of pure bread ingredients written by Julie Bedier, in *Commonweal* of April 27. The author, while not a professional nutritionist, bears out the statements made before the select committee by scientists of wide repute.

I therefore include this article as part of my remarks.

STONES FOR BREAD

(By Julie Bedier)

When I was a little girl, hearing a story about someone who had lived on bread and water, I decided to try it. I took a bowl of clear cold water, broke up bits of bread in it, and did my best to down the mess. Resolution: no more bread and water. However, saints in their hermit cells and prisoners in their dungeons have lived, sometimes for years, on bread and water. Not only that,

but rigorous fasting was widely and successfully practiced during Lent, in ancient and medieval times.

Lent is still supposed to be a time of fasting, but how many are able to keep it? In my home parish, I remember, there was an old woman, a seamstress, who was said to be a saint; she kept the "black fast" all through Lent. Nobody else that I knew kept it. Workingmen and their families were excused, and most people were in that class. People with desk jobs could not fast, because they grew faint and suffered headaches. The teaching Sisters could not fast while at the same time keeping up classroom work and discipline. Some of the clergy may have fasted; certainly some were too sickly and overworked to do so. And so, who kept the Lenten fast? Only old Mrs. O'Reardon.

After I grew up and spent some years in China as a missionary nun, I began to think the Lenten regulations for China were more sensible than ours. In that country there are only eight fast days in the year—the Fridays of Lent and Christmas Eve. Eight fast days, and every Catholic keeps them. Even the poor coolies pulling rickshaws for a living kept the fast, and kept it more rigorously than we Sisters did. The Chinese Catholics ate nothing at all until noon, whereas we took the usual piece of bread and coffee at breakfast time; the Chinese were able to outdo us, somewhat to our humiliation.

Francis Thompson, in his essay *Health and Holiness*, speaks of the exuberant vitality of his hardy ancestors, compared with the "existing valetudinarianism of our oversoft bodies," of the medieval men clad in iron mail, who fought through the Crusades in the torrid lands of the east, while modern soldiers in khaki fall out by the hundreds during mere maneuvers on an English down.

In this connection it seems apropos to mention the experiences of our soldiers in Korea, brave and hardy youngsters, but needing rest and hot chow at regular intervals, and their own wonder at the Red Chinese, who can fight all day and all night, and all the next day, without rest, while using for food only a few cold cornmeal cakes or millet dumplings which each man carries with him. Here the less modernized Chinese might be compared to Thompson's medieval Crusader. It never occurred to Francis Thompson, nor does it occur to many of us, to lay the blame for our modern lack of stamina where it belongs. Weakness of will? Of piety? Not at all. The faintness, the dizziness, the failure of the body, are not imaginary; they are real and have a real cause. The experiments of a few scientists and investigators, independent and widely scattered, give the clue to those who care enough to think it through.

Man, while being practically omnivorous, is largely a grain-eating creature. Down through the ages bread, or its equivalent, has been his staff of life. Nations have grown great and strong where wheat prospered. "Give us . . . our daily bread" meant just that. However, the bread of ancient and medieval peoples had no relation to the modern bakers' bread which is given us today. I have eaten the "black bread" of the Russian peasant, and it is a meal in itself, dark brown, solid and heavy, "chewy" and moist, and utterly delicious. You can feel and taste its substantial goodness with each bite. After that try a slice of modern white bread, and you might as well be chewing on a nice tender paper towel. Bread and water—peasants' black bread and water—could indeed sustain life. I should hate to try living on white bread and water for any length of time.

Our Food and Drug Administration has recently ordered bakers to stop using chemical "extenders" and "emulsifiers" which take the place of the milk and butter formerly

used in home-made bread. However, the inedible trash added to the flour in bakeries does not make all the difference. It is the flour itself that is devitalized and anemic. Much of our wheat is grown on soil lacking in essential minerals. Year after year, crops are taken off the soil and nothing put back. Nature demands a return of services, and when she is flouted, she cannot be blarneyed or propagandized; she gives what she gets. She is most just. Crops grown on deficient soil are deficient crops.

Next, the wheat, formerly cut and allowed to dry in shocks before threshing, is now combined in the field before the grain is well ripened. Stored at once in huge elevators, it has to be protected from weevils by having cyanide gas blown through it. Then it is milled at a high rate of speed, at high temperatures in our modern mills; the old-fashioned millstones, grinding slowly, did not destroy vitamins so efficiently. The flour is then refined, separated from the bran which contains minerals and vitamins so necessary to life. After refining, it is usually bleached with chemicals, some of which have been proved very injurious to health. Then it may be stored for long periods before it is used for bread.

Whole wheat flour is difficult to keep for any length of time, as weevils breed in it and it is soon discovered to be buggy. The refined white flour does not get buggy, and for a good reason. The insects know which flour is fit to eat; and with their God-given instinct they choose the foods which will sustain life and avoid the worthless ones.

We moderns are so convinced that our diet is the most scientific, our standard of living the highest in history, that it comes as a shock when we are told of the great numbers of young men found to be unfit for our Armed Forces on account of poor health. It is true we eat a great deal of meat, sweets, and out-of-season vegetables and fruits, these latter often of poor quality from long storage and shipping after being half ripe when picked.

If we did not have these additions to our diet we should be badly off indeed, as our bread surely would not sustain life by itself. No amount of our added foodstuffs, however, can take the place of whole grains. Man needs grain in his diet, and he needs plenty of it. The shame is that there is a kind of conspiracy to prevent his getting it. There is "whole wheat" bread on the market, to be sure, but this whole wheat is only a trade name, having no foundation in fact. There are people who, refusing to be pushed around, have developed a mighty wrath and have taken to grinding their own wheat in small kitchen grinders and baking their bread from the grain, fresh ground. These people are few, but the number is growing. Their enthusiastic testimonials and their relish for the plain brown, fragrant wheaten loaf are eloquent.

In the Himalaya Mountains in India, near the border of the U. S. S. R., is the land of Hunza, shut in by towering mountain peaks. It is a dry country, where farming is done by means of irrigation. Farm land is scarce and is made up of little patches on stair-step terraces carved in the mountain sides. Crops are, therefore, scanty, and winters are cold and bleak. The Hunzukuts who live there are a hardy race of mountaineers, light of skin and with handsome features and figures. They are intelligent, cheerful, lovers of dancing, at which they are skilled, and expert polo players. They are peasants and herders, and few of them can read or write.

Hunzukuts sometimes die by falling down mountain peaks, but seldom from disease. They have no doctors or hospitals, take no medicines and seem to need none. Colds, appendicitis, stomach troubles, heart disease, cancer, and "nerves" are unknown

among them. They live to be from 85 to 100 or more, and pass away from old age. The only ailment they seem to know is some eye troubles, caused by smoke from the fires in their little houses. Fuel is scarce; they are like the American Indian, who said, "White man build big fire, sit 'way back; Indian build little fire, sit close to."

Hunzukuts often walk 60 miles at a time, up and down steep mountains, carrying heavy loads. A Hunzukut of 70 plays a fast game of polo, on foot, and is not winded. In the evening, after a day of burden-bearing over mountain trails, perhaps in drenching rain, Hunzukuts often have a gay dance around a fire. One Hunzukut messenger made a 200-mile journey over the mountains, on foot. He returned in 7 days, quite untired and fresh. The people of Hunza are very cleanly. It is a custom among them, in winter, to make two large holes in the ice of a pond, then dive in at one end and come out of the other, over and over again, quite as cheerfully as a polar bear.

Why are the Hunzukuts so hardy? A group of scientists made a study of them and their habits, and their findings are interesting, to say the least.

The Hunzukuts live entirely upon natural food which they raise themselves. No canned, frozen, or preserved food processed in factories ever reaches them. Their bread is made from whole wheat, grown at home, freshly ground in the home and baked there. They use no sugar, no candy, no ice cream or bottled drinks (which contain much sugar). Their food is made up of wheat, barley, millet, and buckwheat, of vegetables, nuts, and butter, of apricots, mulberries, apples, grapes, peaches, and pears, together with a small amount of meat from their herds of goats. They do not peel their vegetables, but eat skin and all. They raise all this food on soil which they keep fertile by nature's means; that is, they put all vegetable, animal and human wastes back into the soil after composting them.

The scientists decided that the food habits of the Hunzukuts might be the cause of their fine health and good dispositions, because other people living nearby in the same climate, but having different food habits, were both unhealthy and quarrelsome. However, the inquirers wanted to be sure. They then experimented with three groups of rats, which were kept in cages in a laboratory. One group was fed upon the food of the Hunzukuts. Another group was fed white rice, vegetables, and spices—the diet of the poor of southern India. The third group got white bread made from factory-milled flour, margarine, tea with sugar, a little boiled milk, cabbage, potatoes, canned meat and jaw. This was the "white man's diet"—the food of many working people of England and of some in America.

The diets were kept up for several years, and the observers were startled by what they saw. The "Hunzukut" rats had no illness, no deaths, were fine, sleek, handsome, tame animals with good tempers. The "Southern Indian" rats were diseased in nose, ears, heart, stomach, lungs—in every organ. They had poor teeth, developed boils, lost their hair, and were quarrelsome and wild. The "English" rats also had most of the same diseases. They were nervous, often tried to bite their caretaker, and killed and ate the weaker rats among them.

While considering the advantages of grain in diet, the following experience of a group of Maryknoll Sisters seems particularly significant. Throughout the war years these women, five in number, lived in a large city of Manchuria where they conducted a school. First under the Japanese, and later under the Russian occupation, food grew daily scarcer. When ordinary meat, fruit and vegetables, dairy products, and canned goods became unobtainable, the Sisters, with considerable

good sense, bethought themselves of the food of the Chinese poor—kaoliang, the seed grain of the Manchurian sorghum plant. This grain is widely raised by the Chinese in the north, as it will thrive where rice cannot be grown. Farmers, laborers, and beasts of burden eat it.

Kaoliang is simply threshed and winnowed, then boiled as a kind of porridge, and eaten with a sauce or vegetables. The Sisters bought bags of this sorghum grain and began to use it in the traditional way. As they took in numbers of destitute refugees, they fed the refugees on the same fare as they themselves used. For 2½ years they lived on kaoliang mush, sometimes adding a little seaweed, some grass or a few leaves of cabbage, and rarely a bit of fish for flavoring. The amount of these other items was negligible. Kaoliang was their "daily bread" indeed. The five Sisters found that their health was excellent, in spite of having to live through two Manchurian winters of sub-zero weather with practically no heat in the house. They contracted no illness of any kind during this period. Their eyes, teeth, nerves and general health improved under the diet.

In time, even the kaoliang became scarce and hard to buy. As the number of refugees increased, the Sisters felt considerable weakness and hunger, since the portions of sorghum porridge had to be much watered to go round for all. The unpalatability, too, was hard to bear, as the boiled grain with salt and grass or seaweed would hardly be listed among the *hors d'oeuvres* at a banquet.

Each missionary had a hard day's work to do, teaching in the classroom, and a mile to walk each way to and from school. Constant fear of raids and brigandage also kept them on edge. In spite of all they came out of the ordeal in good health and spirits. The Sisters learned by experience why the Chinese coolie has such strength and vigor, comparatively speaking in spite of his poverty, lack of sanitation and medical attention, and his crowded living conditions. They had done well on the coolie's daily kaoliang. The wholesome vitamin-rich grain had been practically their only food for 2½ years.

What does all this prove? It seems at least to point the finger at a crime being committed against us all, against our health, our vitality, and against our children. No wonder we cannot keep the Lenten fasts, if the food we do eat has lost its power to sustain health. It is a situation that cries to heaven. However, like the weather, nobody does anything about it.

Katyn Massacre Should Be Investigated

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on April 13, 1943, the Berlin radio announced that German authorities had discovered mass graves of thousands of Polish Army officers in the Katyn Forest near Smolensk, U. S. S. R. The Germans placed the blame for this massacre on the Soviets. The Soviets immediately countered by charging the massacre to the Nazis. On April 17 the Polish Government in exile requested the International Red Cross to investigate the

were all young men when they wrote their masterpieces.

In the realm of government and politics, William Pitt was Prime Minister of Great Britain at the age of 24. He is acclaimed by most historians as the greatest Prime Minister Britain ever had, greater even than Winston Churchill. William Pitt saved England in the great Napoleonic era of world conflagration.

In America, Thomas Jefferson wrote the Declaration of Independence when he was 33 years of age. Alexander Hamilton, the father of the American currency and one of the founders of the American Constitution, was adjutant to Gen. George Washington at the age of 20 and helped to plan the campaigns which made this country independent. Madison and Monroe were both young men when they fought for the American Constitution. John C. Calhoun, who once represented the district it is now my honor to represent in Congress, was elected to the House of Representatives at the age of 28 and in a few months was one of the outstanding leaders of the country. Henry Clay was United States Senator at the age of 29. A few years later on the same day he took his oath of office as a Member of the House of Representatives. He was elected Speaker of the House, at the age of 34.

In the field of music, Mozart was playing publicly at the age of 6 and composed his first symphony at the age of 9.

In military science and tactics, the greatest generals the world has ever produced were young men, little older than you. Alexander the Great conquered the world before he was 33 years old. Napoleon Bonaparte was a lieutenant general at the age of 27, and dominated Europe at the age of 31. Hannibal was commander of the Carthaginian Army in Spain when he was 25. Gustavus Adolphus was commander of the Norwegian Army at the age of 19. These four men are credited by most historians as being the greatest military generals of all times. They were at their best when they combined their great intellect with the vigor and imagination of youth.

The members of this graduating class are all young men—but we must not forget the ladies. Joan of Arc was a French leader while in her teens. Florence Nightingale also made great accomplishments early in life.

Jesus Christ hung on Calvary's cross at the age of 33, after He had started a movement which is still growing today and has hundreds of millions in its ranks. And today a young evangelist in America—Billy Graham at the age of 32—has won hundreds of thousands of Americans to the cause of Christianity.

We are never too old nor too young to serve our country. Let no man ridicule you for your youth.

I hope you will pardon this personal reference. I received no encouragement when I ran for the legislature of my State of South Carolina at the age of 22, but the people of my county elected me. Two years later, at the age of 24, I received no encouragement when I ran for the State senate, but I was elected over two opponents. I was advised by many not to run for Congress in 1946 because I was what they termed too young, but still the people elected me to the House of Representatives.

Let us not be discouraged by the cynics and those who would have us wait while America may be passing through its hour of greatest danger. Our country needs us today. Tomorrow may be too late. The past generation has failed to give us, the youth of today, the peace that they promised, the security that was to be ours. Let us not make the same mistake and pass on to the next generation a world of chaos, of war, of fear, and of apprehension. We must act now, before it

is too late, to save our country in this hour of crisis.

A story is told of Napoleon Bonaparte when he was being defeated by the Austrians at the Battle of Austerlitz. He had done his best and defeat was staring him in the face. As his veterans fell back in disorder, he rode up to a little fourteen-year-old drummer boy, and the great general said, "Son, beat a retreat." The little boy looked up at his great commander and said, "Sir, I don't know how. You never taught me how to beat a retreat. But, sir, I can beat a charge on this drum that will wake the dead on this battlefield." Napoleon thought for a moment and then said, "Beat it then." The old guard, seeing the courage of this little boy and hearing his stirring notes on the drum, rallied and won for Bonaparte the greatest victory in French history.

The great minds of America may fail to solve the present-day problems. Just remember the great general Bonaparte and all of his commanders had given up that day in the Battle of Austerlitz, only to see defeat turned into a great victory by a fourteen-year-old lad. The youth of America today, like the little drummer boy, might save this country after our leaders have done their utmost.

I wish you great success in the years ahead. May you serve your community, your State and your Nation as well as yourselves and your families. God bless you, each of you.

Stones for Bread?

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. DELANEY. Mr. Speaker, in the course of the investigation of the use of chemicals in food products, carried on by a select committee authorized by this and the previous Congress, I have read, or heard, as chairman, the testimony of many nationally known experts on nutrition. Many of the scientists who testified before the select committee have devoted their lives to finding new methods of preserving the natural values and purity of food. Some of these scientists, experts on nutrition, have developed recipes for baking pure, wholesome bread filled with natural ingredients and free of chemical additives.

In support of this expert testimony I was gratified to note an article on the merits of pure bread ingredients written by Julie Bedier, in *Commonweal* of April 27. The author, while not a professional nutritionist, bears out the statements made before the select committee by scientists of wide repute.

I therefore include this article as part of my remarks.

STONES FOR BREAD

(By Julie Bedier)

When I was a little girl, hearing a story about someone who had lived on bread and water, I decided to try it. I took a bowl of clear cold water, broke up bits of bread in it, and did my best to down the mess. Resolution: no more bread and water. However, saints in their hermit cells and prisoners in their dungeons have lived, sometimes for years, on bread and water. Not only that,

but rigorous fasting was widely and successfully practiced during Lent, in ancient and medieval times.

Lent is still supposed to be a time of fasting, but how many are able to keep it? In my home parish, I remember, there was an old woman, a seamstress, who was said to be a saint; she kept the "black fast" all through Lent. Nobody else that I knew kept it. Workingmen and their families were excused, and most people were in that class. People with desk jobs could not fast, because they grew faint and suffered headaches. The teaching Sisters could not fast while at the same time keeping up classroom work and discipline. Some of the clergy may have fasted; certainly some were too sickly and overworked to do so. And so, who kept the Lenten fast? Only old Mrs. O'Reardon.

After I grew up and spent some years in China as a missionary nun, I began to think the Lenten regulations for China were more sensible than ours. In that country there are only eight fast days in the year—the Fridays of Lent and Christmas Eve. Eight fast days, and every Catholic keeps them. Even the poor coolies pulling rickshaws for a living kept the fast, and kept it more rigorously than we Sisters did. The Chinese Catholics ate nothing at all until noon, whereas we took the usual piece of bread and coffee at breakfast time; the Chinese were able to outdo us, somewhat to our humiliation.

Francis Thompson, in his essay *Health and Holiness*, speaks of the exuberant vitality of his hardy ancestors, compared with the "existing valetudinarianism of our oversoft bodies," of the medieval men clad in iron mail, who fought through the Crusades in the torrid lands of the east, while modern soldiers in khaki fall out by the hundreds during mere maneuvers on an English down.

In this connection it seems apropos to mention the experiences of our soldiers in Korea, brave and hardy youngsters, but needing rest and hot chow at regular intervals, and their own wonder at the Red Chinese, who can fight all day and all night, and all the next day, without rest, while using for food only a few cold cornmeal cakes or millet dumplings which each man carries with him. Here the less modernized Chinese might be compared to Thompson's medieval Crusader. It never occurred to Francis Thompson, nor does it occur to many of us, to lay the blame for our modern lack of stamina where it belongs. Weakness of will? Of piety? Not at all. The faintness, the dizziness, the failure of the body, are not imaginary; they are real and have a real cause. The experiments of a few scientists and investigators, independent and widely scattered, give the clue to those who care enough to think it through.

Man, while being practically omnivorous, is largely a grain-eating creature. Down through the ages bread, or its equivalent, has been his staff of life. Nations have grown great and strong where wheat prospered. "Give us . . . our daily bread" meant just that. However, the bread of ancient and medieval peoples had no relation to the modern bakers' bread which is given us today. I have eaten the "black bread" of the Russian peasant, and it is a meal in itself; dark brown, solid and heavy, "chewy" and moist, and utterly delicious. You can feel and taste its substantial goodness with each bite. After that try a slice of modern white bread, and you might as well be chewing on a nice tender paper towel. Bread and water—peasants' black bread and water—could indeed sustain life. I should hate to try living on white bread and water for any length of time.

Our Food and Drug Administration has recently ordered bakers to stop using chemical "extenders" and "emulsifiers" which take the place of the milk and butter formerly

used in home-made bread. However, the inedible trash added to the flour in bakeries does not make all the difference. It is the flour itself that is devitalized and anemic. Much of our wheat is grown on soil lacking in essential minerals. Year after year, crops are taken off the soil and nothing put back. Nature demands a return of services, and when she is flouted, she cannot be blarneyed or propagandized; she gives what she gets. She is most just. Crops grown on deficient soil are deficient crops.

Next, the wheat, formerly cut and allowed to dry in shocks before threshing, is now combined in the field before the grain is well ripened. Stored at once in huge elevators, it has to be protected from weevils by having cyanide gas blown through it. Then it is milled at a high rate of speed, at high temperatures in our modern mills; the old-fashioned millstones, grinding slowly, did not destroy vitamins so efficiently. The flour is then refined, separated from the bran which contains minerals and vitamins so necessary to life. After refining, it is usually bleached with chemicals, some of which have been proved very injurious to health. Then it may be stored for long periods before it is used for bread.

Whole wheat flour is difficult to keep for any length of time, as weevils breed in it and it is soon discovered to be buggy. The refined white flour does not get buggy, and for a good reason. The insects know which flour is fit to eat; and with their God-given instinct they choose the foods which will sustain life and avoid the worthless ones.

We moderns are so convinced that our diet is the most scientific, our standard of living the highest in history, that it comes as a shock when we are told of the great numbers of young men found to be unfit for our Armed Forces on account of poor health. It is true we eat a great deal of meat, sweets, and out-of-season vegetables and fruits, these latter often of poor quality from long storage and shipping after being half ripe when picked.

If we did not have these additions to our diet, we should be badly off indeed, as our bread surely would not sustain life by itself. No amount of our added foodstuffs, however, can take the place of whole grains. Man needs grain in his diet, and he needs plenty of it. The shame is that there is a kind of conspiracy to prevent his getting it. There is "whole wheat" bread on the market, to be sure, but this whole wheat is only a trade name, having no foundation in fact. There are people who, refusing to be pushed around, have developed a mighty wrath and have taken to grinding their own wheat in small kitchen grinders and baking their bread from the grain, fresh ground. These people are few, but the number is growing. Their enthusiastic testimonials and their relish for the plain brown, fragrant wheaten loaf are eloquent.

In the Himalaya Mountains in India, near the border of the U. S. S. R., is the land of Hunza, shut in by towering mountain peaks. It is a dry country, where farming is done by means of irrigation. Farm land is scarce and is made up of little patches on stairstep terraces carved in the mountain sides. Crops are, therefore, scanty, and winters are cold and bleak. The Hunzukuts who live there are a hardy race of mountaineers, light of skin and with handsome features and figures. They are intelligent, cheerful, lovers of dancing, at which they are skilled, and expert polo players. They are peasants and herders, and few of them can read or write.

Hunzukuts sometimes die by falling down mountain peaks, but seldom from disease. They have no doctors or hospitals, take no medicines and seem to need none. Colds, appendicitis, stomach troubles, heart disease, cancer, and "nerves" are unknown

among them. They live to be from 85 to 100 or more, and pass away from old age. The only ailment they seem to know is some eye troubles, caused by smoke from the fires in their little houses. Fuel is scarce; they are like the American Indian, who said, "White man build big fire, sit 'way back; Indian build little fire, sit close to."

Hunzukuts often walk 60 miles at a time, up and down steep mountains, carrying heavy loads. A Hunzukut of 70 plays a fast game of polo, on foot, and is not winded. In the evening, after a day of burden-bearing over mountain trails, perhaps in drenching rain, Hunzukuts often have a gay dance around a fire. One Hunzukut messenger made a 200-mile journey over the mountains, on foot. He returned in 7 days, quite untired and fresh. The people of Hunza are very cleanly. It is a custom among them, in winter, to make two large holes in the ice of a pond, then dive in at one end and come out of the other, over and over again, quite as cheerfully as a polar bear.

Why are the Hunzukuts so hardy? A group of scientists made a study of them and their habits, and their findings are interesting, to say the least.

The Hunzukuts live entirely upon natural food which they raise themselves. No canned, frozen, or preserved food processed in factories ever reaches them. Their bread is made from whole wheat, grown at home, freshly ground in the home and baked there. They use no sugar, no candy, no ice cream or bottled drinks (which contain much sugar). Their food is made up of wheat, barley, millet, and buckwheat, of vegetables, nuts, and butter, of apricots, mulberries, apples, grapes, peaches, and pears, together with a small amount of meat from their herds of goats. They do not peel their vegetables, but eat skin and all. They raise all this food on soil which they keep fertile by nature's means; that is, they put all vegetable, animal and human wastes back into the soil after composting them.

The scientists decided that the food habits of the Hunzukuts might be the cause of their fine health and good dispositions, because other people living nearby in the same climate, but having different food habits, were both unhealthy and quarrelsome. However, the inquirers wanted to be sure. They then experimented with three groups of rats, which were kept in cages in a laboratory. One group was fed upon the food of the Hunzukuts. Another group was fed white rice, vegetables, and spices—the diet of the poor of southern India. The third group got white bread made from factory-milled flour, margarine, tea with sugar, a little boiled milk, cabbage, potatoes, canned meat and jaw. This was the "white man's diet"—the food of many working people of England and of some in America.

The diets were kept up for several years, and the observers were startled by what they saw. The "Hunzukut" rats had no illness, no deaths, were fine, sleek, handsome, tame animals with good tempers. The "Southern Indian" rats were diseased in nose, ears, heart, stomach, lungs—in every organ. They had poor teeth, developed boils, lost their hair, and were quarrelsome and wild. The "English" rats also had most of the same diseases. They were nervous, often tried to bite their caretaker, and killed and ate the weaker rats among them.

While considering the advantages of grain in diet, the following experience of a group of Maryknoll Sisters seems particularly significant. Throughout the war years these women, five in number, lived in a large city of Manchuria where they conducted a school. First under the Japanese, and later under the Russian occupation, food grew daily scarcer. When ordinary meat, fruit and vegetables, dairy products, and canned goods became unobtainable, the Sisters, with considerable

good sense, bethought themselves of the food of the Chinese poor—kaoliang, the seed grain of the Manchurian sorghum plant. This grain is widely raised by the Chinese in the north, as it will thrive where rice cannot be grown. Farmers, laborers, and beasts of burden eat it.

Kaoliang is simply threshed and winnowed, then boiled as a kind of porridge, and eaten with a sauce or vegetables. The Sisters bought bags of this sorghum grain and began to use it in the traditional way. As they took in numbers of destitute refugees, they fed the refugees on the same fare as they themselves used. For 2½ years they lived on kaoliang mush, sometimes adding a little seaweed, some grass or a few leaves of cabbage, and rarely a bit of fish for flavoring. The amount of these other items was negligible. Kaoliang was their "daily bread" indeed. The five Sisters found that their health was excellent, in spite of having to live through two Manchurian winters of sub-zero weather with practically no heat in the house. They contracted no illness of any kind during this period. Their eyes, teeth, nerves and general health improved under the diet.

In time, even the kaoliang became scarce and hard to buy. As the number of refugees increased, the Sisters felt considerable weakness and hunger, since the portions of sorghum porridge had to be much watered to go round for all. The unpalatability, too, was hard to bear, as the boiled grain with salt and grass or seaweed would hardly be listed among the hors d'oeuvres at a banquet.

Each missionary had a hard day's work to do, teaching in the classroom, and a mile to walk each way to and from school. Constant fear of raids and brigandage also kept them on edge. In spite of all they came out of the ordeal in good health and spirits. The Sisters learned by experience why the Chinese coolie has such strength and vigor, comparatively speaking in spite of his poverty, lack of sanitation and medical attention, and his crowded living conditions. They had done well on the coolie's daily kaoliang. The wholesome vitamin-rich grain had been practically their only food for 2½ years.

What does all this prove? It seems at least to point the finger at a crime being committed against us all, against our health, our vitality, and against our children. No wonder we cannot keep the Lenten fasts, if the food we do eat has lost its power to sustain health. It is a situation that cries to heaven. However, like the weather, nobody does anything about it.

Katyn Massacre Should Be Investigated

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, on April 13, 1943, the Berlin radio announced that German authorities had discovered mass graves of thousands of Polish Army officers in the Katyn Forest near Smolensk, U. S. S. R. The Germans placed the blame for this massacre on the Soviets. The Soviets immediately countered by charging the massacre to the Nazis. On April 17 the Polish Government in exile requested the International Red Cross to investigate the

true situation. The Red Cross agreed to investigate the massacre if requested by all parties concerned. The Soviet Government refused to give its consent to the investigation and on April 26, 1943, broke off diplomatic relations with the Polish Government.

The German Government then set up an investigating committee composed of representatives of 12 countries. This committee made a report on April 30, 1943, which was printed in *Amtliches Material zum Massenmord von Katyn*, Berlin, 1943, pages 114-118. A translation of this was admitted as Exhibit Goering No. 61 in the Nuremberg trials.

Lt. Col. John Van Vliet, Jr., and Capt. Donald B. Stewart, American prisoners of war in Germany in 1943, were taken to Katyn Forest to investigate for themselves the circumstances of the massacre. Colonel Van Vliet, on May 22, 1945, made a report of this investigation to Maj. Gen. Clayton Bissell. Only one copy of such report was made and it was marked top secret and filed by General Bissell. Apparently this report has never again been seen. It is now lost and no one in the Department of Defense or the State Department knows where Colonel Van Vliet's report is.

In January 1944 the area around Smolensk was recaptured by the Russians. Thereafter, on January 24, 1944, a Soviet-sponsored investigation made its report on the Katyn massacre. According to this report the Germans were responsible for the massacre of the Polish officers. But all of these investigators were Soviets. They were V. I. Prozorovsky, chief medical expert of the People's Commissariat of Public Health of the U. S. S. R.; V. M. Smolyaninov, professor of medical jurisprudence at the Second Moscow State Medical Institute; D. N. Vyropayev, medical sciences professor; P. S. Semenovskiy, senior research worker, State Institute of Medical Jurisprudence of the People's Commissariat of Public Health of the U. S. S. R.; M. D. Shvaikova, senior research worker, State Institute of Medical Jurisprudence of the People's Commissariat of Public Health of the U. S. S. R.

The indictment of the major war criminals before the international military tribunal at Nuremberg contained, among others, the following definite charges against the Nazi leaders:

Murder and ill treatment of prisoners of war and other members of the armed forces of the countries with whom Germany was at war and of persons on the high seas * * *. In September 1941, 11,000 Polish officers who were prisoners of war were killed in the Katyn Forest near Smolensk. (Vol. 1, p. 52-54.)

Evidence relating to this charge was admitted by the tribunal on February 14, 1946—volume XV, page 289 and following pages.

Nonetheless, the final judgment of the Nuremberg tribunal makes no mention of this charge. It neither acquits the Nazis of this charge nor does it find them guilty of it. And there is no record in the Nuremberg hearings of any decision or ruling which caused the prosecution to drop this count.

In view of these facts I have related, I believe it is highly important that a

special House committee be created to investigate the true facts of the Katyn massacre.

The conflicting reports of the Nazis and the Communists, the mysterious disappearance of the Van Vliet Report, the failure of the Nuremberg tribunal to make any decision on the charges relating to the massacre all demand that this Congress make a serious effort to finally determine the responsibility for this horrendous massacre.

I include herewith exhibit Goering No. 61 of the trial of the major war criminals before the international military tribunal, Nuremberg, Germany, November 14, 1945–October 1, 1946, which exhibit is a translation of the report of the International Medical Commission appointed by the German authorities in April 1943:

EXHIBIT GOERING No. 61

[Excerpt from the official documents concerning the mass murder at Katyn, compiled by order of the Ministry of Foreign Affairs based on documentary material of evidence compiled and published by the German Information Office (Berlin 1943) (pp. 114-118)]

17. PROTOCOL OF THE INTERNATIONAL MEDICAL COMMISSION AT THE TIME AT SMOLENSK, APRIL 30, 1943

Protocol drawn up on the occasion of the examination of mass-graves of Polish officers in the forest of Katyn near Smolensk, subject to a thorough scientific examination which was performed by a commission of leading representatives of European colleges for the study of law, medicine, and criminology and other prominent medical college teachers.

The commission was composed of the following persons:

1. Belgium: Dr. Speleers, ord. professor of ophthalmology at the University of Ghent.
2. Bulgaria: Dr. Markov, ord. professor of forensic medicine and criminology at the University of Sofia.
3. Denmark: Dr. Tramsen, demonstrator at the Institute of Forensic Medicine of Copenhagen.
4. Finland: Dr. Saxén, ord. professor of pathological anatomy at the University of Helsinki.
5. Italy: Dr. Palmieri, ord. professor of forensic medicine and criminology at the University of Naples.
6. Croatia: Dr. Miloslavich, ord. professor of forensic medicine and criminology at the University of Agram.
7. Netherlands: Dr. de Burlet, ord. professor of anatomy at the University of Groningen.
8. Protectorate of Bohemia and Moravia: Dr. Hajek, ord. professor of forensic medicine and criminology in Prague.
9. Rumania: Dr. Birkle, court doctor attached to the Rumanian Ministry of Justice and first assistant at the Institute of Forensic Medicine and Criminology in Rumania.
10. Switzerland: Dr. Naville, ord. professor of forensic medicine at the University of Geneva.
11. Slovakia: Dr. Subik, ord. professor of pathological anatomy at the University of Pressburg, chief of the state health service in Slovakia.
12. Hungary: Dr. Orsos, ord. professor of forensic medicine and criminology at the university in Budapest.

During the work and conferences of the delegation the following were present:

1. Dr. Buntz, ord. professor of forensic medicine and criminology at the university of Breslau, instructed by the German High Command to direct excavations in Katyn.
2. Medical-Inspector Dr. Costedoat, who was commissioned by the head of the French

Government to be present at the work of the commission.

The discovery of mass graves of Polish officers in the forest of Katyn, near Smolensk, which was brought recently to the notice of the German authorities, has caused the head of the Reich health service, Dr. Conti, to invite the above-mentioned specialists from various European countries to be present at the inspection of the place discovered at Katyn in order to clear up this unique case.

The commission personally invited some native Russian witnesses, who, amongst other things, confirmed that in March and April 1940 large rail transports with Polish officers were unloaded almost daily at Gnesdowa station near Katyn, then transported in prisoners' lorries to the forest Katyn and were never seen again; they further noted the previous findings and identification, and inspected the evidence discovered. According thereto 982 bodies were exhumed up to April 30, 1943. About 70 percent of them were immediately identified, whilst the papers of the others could only be utilized for identification after careful preparation. The bodies exhumed before the arrival of the commission were all inspected, and an inquest held on a considerable number by Professor Buntz and his collaborators. Up to today 7 mass graves were opened, the largest of which contained approximately 2,500 bodies of officers.

Inquests on nine bodies were held personally by the members of the commission, and on numerous specially chosen cases a post mortem was held.

FORENSIC-MEDICAL RESULTS OF THE INSPECTIONS AND EXAMINATIONS CARRIED OUT

A shot in the head was without exception observed as cause of death of all bodies so far exhumed. It was throughout a matter of shots in the head and, predominantly, of a single shot in the neck, in rare cases of double shots in the neck, in a single case of a treble shot in the neck. The bullet hole is usually low in the neck and leads into the bone of the occiput near to the occiput hole, whilst the spot where the bullet left as a rule lies in the vicinity of the beginning of the hair growth, in very rare cases deeper. It is throughout a matter of pistol shots of less than 8 mm. caliber.

From the fracture of the skull and the finding of powder smoke on the occiput bone near the spot where the bullet entered, and also from the similar localization of the points where the bullet entered, it is to be concluded that it was a point-blank shot or from closest range, especially as the direction of the fire-channel is also similar with only a few slight deviations. From the striking similarity of the injuries and the localization of the points where the bullet entered in a very limited region of the occiput, skilled hand may be supposed. On numerous bodies similar handcuffing and in some cases also four-edged bayonet thrusts in clothing and skin could be established. The carrying out of the chaining corresponds to the chaining established on bodies of Russian civilians who were also exhumed in the forest of Katyn and were buried much earlier. It was moreover established also that the shots in the neck on the bodies of Russian civilians had been similarly accurately aimed.

From the establishment of an oblique blow on the head of a Polish officer, killed by a shot in the neck, which had only crashed in the exterior bone, it is to be concluded that another officer was first killed by this bullet and that, on leaving his body, it pierced the body already shot and lying in the trench. From this fact it may be presumed that shootings were obviously carried out in the trenches in order to avoid transport to the place of burial.

The mass graves are in a forest glade. They are completely leveled and planted with young pine trees. From the personal observation of the members of the commis-

sion and the statement of the forestry official von Herff, called in as expert, it is a question of pine trees of at least 5 years old, poorly developed in the shade of big trees, which were planted on this spot 3 years ago.

The mass graves are arranged in the form of steps in the hilly territory, which consists of pure sand. They reach partly down to the surface water.

The corpses are lying almost exclusively on their faces, tightly packed next to one other and above one other; lying orderly along the side but more promiscuously in the middle. The legs are almost always stretched out. Quite obviously they were laid away in a systematic manner. According to the unanimous observation of the Commission the exhumed bodies show on the whole and individually, especially as regards buttons, insignia of military rank, decorations, shape of boots, ink markings in underwear—the unmistakable characteristics of Polish uniforms. We find here winter clothing; frequently there are found furs, leather jackets, knitted vests, officers' boots, officers' caps typically Polish. Only few of the corpses do not seem to be those of officers; in one case it was a priest. The measurement of the clothing correspond to the measurements of the individual bodies. The underwear is properly buttoned; suspenders and belts are in the proper place. This shows the men wore their uniforms until they died when they were buried with them without ceremony and covered with earth.

None of the corpses have watches and rings although notes made in several diaries until the very last days and with exact statement of the time of entry indicate that there must have been watches. Objects of rare metal were discovered only on a very few corpses and in very hidden places. On the other hand the set of teeth of many of the corpses still included gold teeth. Polish bank notes were found in considerable quantities; there were cigarette and match boxes on the corpses, in several instances also tobacco boxes and cigarette holders engraved "Kocielsk" (the name of the last Soviet prisoner-of-war camp of the murdered persons). The documents found on the corpses (diaries, correspondence, newspapers) dated from the time of fall of 1939 to March and April 1940. The last date so far established is that of a Russian newspaper of April 22, 1940.

The degrees and manifestations of decomposition due to storing of the corpses in the pit and stocking them closely together vary. In addition to mummification on the surface and along the edges of the mass of corpses, moist maceration is evident in the medium portions of the piles of corpses. The sticking together and riveting together of adjacent corpses through the solidifying fluids of the corpses, especially the deformations brought about by pressure, point definitely to the fact that the positions are the original ones.

There is a complete absence of insects or insect residues on the corpses possibly dating from the time the corpses were buried. From this it follows that burying and covering took place during a cold season of the year when there were no insects.

A large number of skulls were examined for changes which, according to the experiences of Professor Orsos, are of extreme importance for the determination of the time of death. We have here an incrustation of tufaceous limestone of several layers on the surface of the brain pulp already homogenized in loamlike fashion. These manifestations do not exist for corpses which have been in the grave less than 3 years. That was the condition, among others, which was particularly pronounced for the skull of corpse No. 523 reddened on the surface of a huge mass burial pit.

SYNOPSIS OF SURVEY

The commission examined in the woods of Katyn mass pits of Polish officers of which so far seven were opened. From these, 932 corpses were so far recovered; postmortem examination was made on part of them, about 70 percent being identified.

All the corpses gave proof of shots in the neck as the exclusive cause of death. From statements of witnesses, from letters found on the corpses, from diaries, newspaper, etc., it is evident that shooting took place in the months of March and April 1940. This corroborates perfectly with the findings made on the mass graves and on the individual corpses of the Polish officers and as described in the minutes.

Mr. Justice Douglas Puts His Foot in It Again

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Baltimore Sun, Baltimore, Md., of September 2, 1951:

MR. JUSTICE DOUGLAS PUTS HIS FOOT IN IT AGAIN

The United States is engaged in a bloody and costly war with Red China. The Chinese sneaked into Korea by a subterfuge to which they still cling. They have been denounced by the United Nations as aggressors. At this moment they are lying and cheating at Kaesong, up to heaven knows what deviltry.

This is the government which the Honorable William O. Douglas now proposes that our Government should recognize. Senator CONNALLY, a man with a sense of national responsibility, did exactly right when he slapped down Mr. Douglas with the comment that he should stop making fool statements.

The slap, unfortunately, comes too late. The fool statement has been made. There is a Douglas claque in this country. To the members of this claque, Mr. Douglas is the fount of all wisdom. To some extent at least he still shines in the fading glory of the old Roosevelt brain trust. This means that to his claque he is not properly bound by the restrictions which confine other judges. The members of the claque still hope that someday, somehow, Mr. Douglas will be President of the United States and that they will then be rewarded for their unctuous support.

The claque will not allow Mr. Douglas' foolish statement to be forgotten. Nor will the Russians. To the latter it is a God-given opportunity to play upon the idea that the people of the United States are far from unified in their present struggle with Red China. We may be sure that Mr. Gromyko, already well prepared with ammunition to gum the works at the San Francisco meeting, will add Mr. Douglas' mischief-making

statement to his store of monkey-wrenches.

And this man, so indifferent to the delicacies and dangers of the present international situation, is a member of the United States Supreme Court, theoretically the most aloof and self-disciplined group in the country.

Small Business Concerns Being Taxed Out of Business

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. SCHWABE. Mr. Speaker, I am in receipt of a letter from a relatively small business concern, which says that the Federal Government is taxing small business concerns out of business.

It will be noted that in this letter my constituent shows concretely how the excess-profits tax law catches a new and expanding small enterprise, with no base earnings period and low investment, and militates against their further enlargement and extension of activities, which practically results in taxing such a concern beyond the point it can survive and continue in business.

In this letter it is also vividly shown that the present tax laws are tending to make the large business concerns larger, and to force the smaller ones out of business and prevent risk and venture capital entering into new business engagements. The result, as well stated, is "that the [present] tax laws are causing the very thing which the Justice Department has been fighting—monopoly."

The letter to which I have reference follows:

As we have always understood it, it has been one of the aims of the Democratic Party to care for the little-business man or for the man with incentive to start in business. We fall in that category and the Federal Government is caring for us by coming close to taxing us out of business. No longer do we worry about our competitors but we do have to worry and scheme to keep our present Federal Government from causing liquidation.

To give you a typical example of the effect of our present excess-profits tax on the small and new businessman let us present our experience:

This company started in business in the fall of 1948 in the Rocky Mountain area. For 2 years we struggled against big established competitors and slack-work periods, just managing to survive. In the spring of 1950 (before Korea), due to a reputation we had gained for efficient operations, we were able to secure a series of contracts with a major company giving us steady work. In fact a second rig was requested and was purchased for their operations, requiring an investment of \$200,000. As is customary, a down payment was made and balance is being paid at the rate of \$5,000 per month for 24 months.

Then comes the excess-profits tax law catching us with no base-earning period and low investment because we are a new expanding company.

For our last fiscal year we are paying \$52,300 in Federal taxes, leaving us \$38,300 net profit to meet our rig payment obligations of \$60,000 per year. Due to the hazardous nature of our operations we should be increasing our working capital for insurance against future losses. Actually, with best efficiency, working capital is decreasing due to overtaxation.

Some departments of the Federal Government are calling for expanded oil production with resulting expanded drilling programs. We could purchase and put to work several more rigs, but under the tax laws we couldn't pay for them, and if we could the profit incentive is not worth the risk and work involved.

If we are the only company or business caught in this situation you could forget it. But inquiries teach us that we are only one of thousands. Under the present tax laws which you gentlemen have passed, a new expanding company has odds against it surviving. The end results can only be that a few large old established businesses will control all business, and that there will be no incentive for new businesses to start. You gentlemen know the evils of such an event. It appears to us that the tax laws are causing the very thing which the Justice Department has been fighting—monopoly.

Gentlemen, the situation is a mess and it is hoped that from the above you can get some idea of why we do not appreciate the Government's present help to the little businessmen.

Industry Dispersal Program

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the President:

I would like to clear up a lot of misinformation about the Government's very important industry dispersal program.

The program has been misrepresented by critics who have mistaken it for something else. The opponents are criticizing supposed efforts to move industry and labor from one part of the country to another. That is not the Government's plan. Our program has no relationship to the Rains amendment, which intended widespread dispersal of plants.

Our program, which was carefully described by the National Security Resources Board recently, does not tell any industry or individual where to locate. It does not propose moving of existing plants, wherever they may be. It merely encourages the spacing of new defense and defense-supporting industries a few miles apart.

Under this program, defense plants and basic industries can, if they wish, find dispersed sites around such existing industrial centers as Detroit, New York, Pittsburgh, or San Francisco. The program merely suggests that in building a new plant in such areas, the site of the new plant should be located a few miles away from other defense plants in the same locality. On the other hand, the program does nothing to interfere with the normal efforts of nonindustrial areas to attract businesses.

This is a common-sense program which serves the national security in the atomic age and is consistent with the American

system of competitive free enterprise. I urge every member of the Congress, every industrialist and every labor representative to take the time to read this program. They will find it economically sound and adaptable to any State or industrial area.

Eight Republicans

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. DINGELL. Mr. Speaker, in order to keep the RECORD straight and to preserve the expressed views of others it appears to me highly desirable that outside opinions based on the evidence be submitted for consideration. I therefore submit an editorial from the Washington Post of August 23 titled "Eight Republicans" which evaluates and points up some of the gross exaggerations and misstatements contained in the purely partisan report on the MacArthur hearings. Fortunately it is not the official report of the committees which jointly conducted the proceedings and to all appearances it does not even reflect the opinion of all the Republican members of the joint committee but rather a group largely known for their pro-Chiang Kai-shek views and favoritism. The document I hope will not be printed at public expense. I consider the report a slanted partisan expression political in nature and purpose and nothing more.

I believe we have already squandered billions in military supplies and cash to aid China against communism and it has been about as effective as pouring sand into a rat hole and less desirable. The Chiang forces in the first place never had the stomach for combat because they had nothing to fight for that held promise for the future except the perpetuation of the Kung-Soong-Chiang "plunderbund." Vile communism on one hand, corruption, starvation, and misery on the other, with no choice in between. So they swapped their American equipment to the Communists for the chance to surrender and today we are recapturing our own equipment in Korea as our boys lay down their lives to do it. The United States Government gave Nationalist China \$200,000,000 in gold to stabilize its currency system and thus to halt the deadly inflation which in addition to war ravaged the country. This gold, many tons of it, was shipped to Chiang from Fort Knox; whatever became of it no one knows. The gold disappeared in another rat hole operation. Like the abject licking of Madame Chiang's hands it does not appeal to me as worthy of repetition. We were burnt severely in China so many times that we ought to be able to follow the right course without even so much as using our brains, sheer instinct should guide us henceforth. No truck with communism under any circumstances or nationalism of the kind we know in China today

unless it reforms or is replaced with a real democratic movement which we in America can embrace and support. At the present time there is no assurance of success. Chiang, Kung, Soong, et al. have not changed.

The editorial follows:

EIGHT REPUBLICANS

A few of the outstanding points in the eight-man Republican document on the MacArthur hearings which call for correction are:

1. That the failure of the United States promptly to deliver arms and munitions to Chiang Kai-shek was responsible for his downfall. This is a travesty of the history which is now part of the record. Much American material was left to pile up in Shanghai, and much of the remainder was bartered to the Communists in return for safe surrender. In other words, Chiang became the supply sergeant for the Communists, as he was called in China. Even General Wedemeyer said the Communists could have been stopped at the Yangtze with broomsticks if there had been any will-to-fight on the part of Chiang's Nationalists.

The point is extremely important in connection with future policy. On analogy the fresh supplies that are being sent to Chiang Kai-shek are likely as not to have much the same fate as the old supplies. This would be inevitable if there were an invasion of the mainland. And that is what Chiang wants—as a Chiang-American operation. Our policy does not yet envisage this, yet—again on analogy—the possibility exists of such a development in our Formosa policy. Policy on Formosa started out as neutralization and shaded quickly into defense, and, before we know it, the defense policy may shade into support of a Chiang landing.

It will be a sad day when our country helps peoples or governments who, as has been proved by Chiang's government cannot or will not help themselves. The United States will wind up with "old men of the sea" on its back crushing the life out of its taxpayers.

2. That there is authoritative evidence of Russian domination of Communist China as far back as 1945.

Nothing of the sort. Everything that Gen. Patrick Hurley said contradicted this thesis. The "authoritative" evidence all jibes with Col. Robert R. McCormick's testimony on his visit to China in 1947. The rebellion against Chiang Kai-shek, he said, "is falsely called a Communist insurrection. Although Communist backed, it is still a bona fide insurrection against a government which is little more than an agency of the Soong family."

Nobody can be positive about the present tie between Moscow and Peking, but a tenable theory on the part of the officials in close touch with the negotiations at Kaesong is that there are the beginnings of a rift. General Ridgway furthermore has gone so far as to say, in a talk with Bert Andrews of the New York Herald Tribune, that our national destiny depends upon our driving a wedge between Peking and Moscow. It would be the height of folly on the part of our policy makers, at any rate, to go on the assumption that Moscow and Peking will always be one and indivisible.

3. Any settlement "south of the Yalu" would constitute a Communist victory.

Nonsense! The purpose of the military action taken under the aegis of the United Nations was to defeat aggression—to push the aggressor back where he came from. When that is accomplished, and a satisfactory agreement on such a basis achieved, the aims of the U. N. action will have been accomplished. General Ridgway has said that that would be "a tremendous victory," and those who are not suffering from a partisan myopia will agree with him.

The reverse side of this eight-man comment—namely, that “victory” is the end of this or any other war action—is equally fallacious. By this is meant that only unconditional surrender can mark the end of hostilities. Battles are fought to victory, but a war should be fought to a settlement if we are going to have a world fit to live in. It was the cardinal mistake in the First and Second World Wars that we forgot this golden rule. Under such a contrary policy as the GOP members advocate, the world would be condemned to perpetual warfare.

Stump Speaking

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of September 8, 1951:

STUMP SPEAKING

The highly charged atmosphere that seems to discharge lightning in the vicinity of General of the Army Douglas MacArthur every time he adds a speech to his public record might be clarified somewhat and the thunderheads dispersed if the general would come right out and announce that he is a candidate for President.

Virtually every utterance made by General MacArthur since he came back from Japan has been that of a man making it plain in stentorian tones that he is available for the nomination and would accept it if offered, despite his disclaimers of political ambition.

The American people know that he is against President Truman and against some of his wartime superiors and colleagues in the Army. He has also made it plain that he considers his administration of conquered Japan the crowning triumph of his admittedly distinguished career, and the American people are inclined to agree with him. But he doesn't say who or what he is for now, today, what he feels may be his due reward for his service, or what he hopes to accomplish in the future. Nor does he throw his strength to any particular Republican candidate. Plainly he is a candidate for President if the Republican Party will give him the nomination.

His Cleveland speech, for example, asserting that the Nation is drifting toward a totalitarian leadership was not a sound analysis of the situation, but it was first-rate political utterance at this juncture. The speech did a great disservice to the American people by employing the technique of spreading fear at a time when a sound, courageous and constructive foreign policy is emerging from the confusion of America's postwar years.

The speech touched all the antiadministration bases, but failed to make generous admission of the truly unselfish sacrifices the American people have made to assist in rebuilding a war-shattered world. His criticism of the United Nations might be valid had he offered something more than an outline of the weaknesses of U. N., which all the world knows. He cited no alternatives.

It might be profitable for General MacArthur, who is so strongly critical of the failure of the United States to seize world leadership, to study another period in world history when Russia had confused and upset the balances of power in Europe—the time of the Congress of Vienna when Britain, which

had laid out treasure for 20 years to defeat Napoleon, was laggard in seizing leadership.

General MacArthur has served his country well, and there isn't the slightest question of his skill as an administrator or commander. Japan is ample proof of his sagacity. Yet, General MacArthur tarnishes his own luster by utterances which have a baldly partisan political complexion.

As a military man he has spent his life in the exercise of command in a totalitarian regime—the Army—where the requirements of discipline must always be totalitarian in character, where regimentation is a natural state and all commands filter down from above. General MacArthur must know that the American people are still participating in politics, issuing the orders at the polls and choosing those to whom they entrust the operation of the Government.

The fiction that he is talking as a soldier and patriot, the private citizen, is unworthy of one who has carved his name so high on monuments that record America's greatness. He should announce his candidacy, or indicate who he supports, for he is stump speaking.

Gen. Charles P. Summerall

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, September 13, 1951

Mr. MAYBANK. Mr. President, in view of the fact that we have passed the largest appropriation bill on record for the armed services, I think it is entirely appropriate, that I call attention to an article published in the Charleston News and Courier with regard to former Chief of Staff of the Army, Gen. Charles P. Summerall. He has just completed 20 years of work at The Citadel, an institution in my State. He is now 84 years of age.

The General, since his retirement from the Army, has rendered most valuable service in many respects to the people throughout America, particularly the Southeast. He was a former student at Porter Military Academy. He was appointed to West Point from the State of Florida, and his interest in the people of the South has never diminished.

As a graduate of West Point and former Chief of Staff of the United States Army, he has always been an advocate of strong preparedness for America, with an Army, a Navy, and an Air Force sufficient to maintain our world prestige.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUMMERALL TOOK OVER AS HEAD OF THE CITADEL 20 YEARS AGO

Twenty years ago today Gen. C. P. Summerall began his first year as president of The Citadel.

On September 12, 1931, at 10 a. m., The Citadel began the 1931-32 academic year with a new president.

General Summerall had ended a 4-year term as Chief of Staff of the United States Army in the fall of 1930 and in March 1931, went upon the retired list of the Army.

Following his retirement General Summerall had accepted an invitation of The

Citadel's board of visitors to become president of the military college.

The Citadel on September 12, 1931, was a far cry from what it is today. In that year there were about 500 cadets in the corps, the faculty numbered 41, of whom only 3 held the doctor of philosophy degree, major electives were offered in 8 fields of study, and there were 2 ROTC units, Infantry and Coast Artillery.

Today The Citadel expects 1,400 cadets for the year beginning September 24; there are 121 faculty members, 25 having the doctor of philosophy degree and 7 more to receive it in the near future, major work is offered in 14 fields, and there are 5 ROTC units.

Since 1931 the physical plant of "The Citadel" has been more than tripled.

New buildings which have been completed in the past 20 years include the cadet chapel, the armory, the barracks, the cadet activities building, an annex to Bond Hall, containing the library, the new dining hall, and quarters for 44 faculty families.

Although much has been accomplished in the past 20 years. The Citadel and General Summerall are looking toward the future, not the past.

Another phase of the building program, consisting of an academic building and a 16-family faculty apartment house, is nearing completion, and further development is in the planning stage.

At least 10 faculty members are on leave each year to complete additional graduate work, and the college is aiming for a larger freshman class in 1952 and an ultimate student body of 2,000.

And on General Summerall's immediate agenda is the receipt of the American Legion Distinguished Service Medal at the Legion's national convention in Miami next month.

It is awarded each year to recognize the achievements of men of heroic stature, and it comes to the general at an appropriate time, the twentieth anniversary of his becoming president of South Carolina's military college, The Citadel.

Message for Russian People Seen in United States Terms to Japan

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the New York Herald Tribune of September 7, 1951:

MESSAGE FOR RUSSIAN PEOPLE SEEN IN UNITED STATES TERMS TO JAPAN

(By David Lawrence)

WASHINGTON, September 6.—America and the free world can be proud of the statement that a President of the United States was able to make on the occasion of the signing of a treaty of peace between the victor and the defeated.

Nowhere in the technical phrases of the treaty itself, quite naturally, are to be found the phrases of interpretation which a magnificent speech by President Truman bequeathed to all history to read. There are two sentences of that speech which tell the story of an achievement unparalleled in modern times, indeed, of a document unmatched anywhere in the treaties of peace

of the past. Those two memorable sentences read as follows:

"It (the treaty with Japan) does not contain the seeds of another war. It is a treaty of reconciliation, which looks to the future, and not the past."

AMERICA'S MORAL FORCE

To be able to make that statement persuasively, to be able to point to the deeds that actually prove its truth in the records of our Army of Occupation, to be able not only to say that there was no spirit of revenge but to be able to point to acts that corroborate it, is to express the moral force of America in the free world.

This moral force is not the attribute alone of the American Government of today. It springs from a long line of precedents expressed in public pronouncements since World War I began. It is the reflection, moreover, of the viewpoint not of just one political party but of all parties in the United States, not of just the spirit of American ideals but of the ideals that freemen hold everywhere. All this has not come to fruition heretofore in such concrete facts of international relationships as are evidenced in the treaty between the Japanese and those who fought victoriously against them.

The kind of peace outlined in the treaty with Japan is the kind that men of all religions have hoped and prayed for, and particularly the kind of peace urged for Europe, too, by President Wilson after World War I and by President Franklin D. Roosevelt after World War II. It is the kind of peace Pope Pius XII has been petitioning for in his public addresses since 1944.

President Truman in his San Francisco address to the assembled nations rightly pays tribute to the outstanding leadership of General of the Army Douglas MacArthur for the way in which the Allied occupation has been carried out. And the President also points with pride to General Ridgway as MacArthur's able successor and to the splendid work of John Foster Dulles, who worked so patiently and intelligently in negotiating the treaty itself.

Rising above party and domestic controversy, the President recognized that, in writing this speech, he was writing for future history a chapter of accomplishment which can prove an inspiration to those who will be custodians of American world policy in the years to come.

For in a sense the treaty, while not mitigating the evils of war or condoning the aggression which started it, does show that, when peoples put aside misguided leaders and take into their own hands the cause of decent international relations, they will find in the people of the United States ready and willing partners in supporting those aims.

America did not receive a single dollar of governmental indemnity out of World War I or World War II. Nor did America annex a single acre of territory from either war.

Mr. Truman's address at the San Francisco gathering of nations will be read with even more intense interest outside America than inside. It will rank as one of the great state papers of all times—not because of its simple phrases but because it recites eloquently the record of American postwar behavior and challenges the rest of the world to adopt the letter and the spirit of that behavior.

IMPLICATIONS FOR FUTURE

The implications as to the future, so far as they relate to an ultimate settlement with the people of Russia and the iron curtain countries—and, indeed, as they may relate to the Chinese people once the Korean aggression can be dealt with in similar fashion—will not, it is hoped, be lost on the people of those countries which are still in the grip of totalitarianism, even as Japan once was. Unfortunately, the Korean war has not gone to the point of defeating on

the battlefield the forces of aggression. There has been no effective contact as yet with the peoples of those countries where troops are being employed against us.

Military force must go hand in hand with moral force in making peace, and the consummation of the Japanese treaty is an excellent example of what can be done once evil governments are removed from power.

Dictatorship Under the United States Flag

EXTENSION OF REMARKS OF

HON. WILLIAM C. LANTAFF

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. LANTAFF. Mr. Speaker, I have just received a very timely report by TIES, an organization of business and professional men and women in my district. The name is made of the initial letters of the words "technicians, industrialists, economists, scientists." The subject of the report is Puerto Rico, and the facts set forth were obtained through a personal investigation by a member of that organization. I believe that all Members of this body will be interested in this most intelligent analysis.

The report follows:

DICTATORSHIP UNDER THE UNITED STATES FLAG

This report on conditions in Puerto Rico is rendered to the TIES Association and the TIES Research Foundation, pursuant to prior agreement with the officers and according to a decision that a survey of Puerto Rican conditions was not only warranted but was urgent. It is now offered as a public document bearing the approval of the TIES Research Foundation.

During this survey there were conferences with businessmen, bankers, lawyers, ordinary citizens, and persons in many other walks of life. There were studies of official reports and figures, public laws and documents, including the Insular budget.

At the outset there is this flat and unequivocal statement:

Gov. Luis Muñoz-Marín operates a complete dictatorship under the American flag.

This dictatorship is made effective in many ways. Economic pressure is a favorite method, but there can be direct political and judicial means applied.

The Muñoz dictatorship is supported chiefly by money derived from the United States.

What few Americans know is that every dollar of revenue tax collected on products (chiefly rum) shipped to the mainland is sent back to the Puerto Rican insular government. This rebate now amounts to about \$4,000,000 annually, but for a considerable period it ran to several times that figure.

On the other hand, Puerto Rico has its own import tax on commodities from the mainland. For example, a standard brand pack of cigarettes costs 30 and 35 cents in Puerto Rico. An American automobile carries a Puerto Rican import tax of 26½ percent. United States electrical goods pay a 26-percent duty to the island—and so on.

ISLAND PAYS NOTHING—RECEIVES PLENTY

The insular government does very well in the matter of revenues that are not available to any State in the Union.

The main point here is that Puerto Rico pays nothing into the United States, but receives very generous bounty from United States taxpayers of many millions per year.

In this report there will be no names used. It is not at all uncommon for a Puerto Rican to say, "We have to live here, you know."

Under those circumstances, this report is a composite, backed by plenty of responsible authority which must remain anonymous. And, too, there is a "gag" law which is so written as to appear aimed at those advocating overthrow of the government by force, but which, like many other laws, can be broadened by official interpretation.

The major exhibit in the Puerto Rican government show window is the Puerto Rican Development Company, an insular government operation, financed by the insular government, but with the highly important help of revenues accruing from the mainland through revenue rebates.

The industrial development undertaking is known as Operation Bootstrap. One writer has called it "operation mouse trap." Another designation might well be "operation fly trap."

The law is written loosely. It provides tax exemption for certain specified new industries for a period of approximately eight more years, tapering down in the final 2 years. Under the law it is possible for the government even to erect a plant for a new industry. It looks like anybody's oyster and too many have construed it in that way, so that United States industries have gone in, lacking skill, lacking market, lacking everything except the desire to get the insular government's largesse, with no chance to lose. It is a lure to the searcher for what is known as cheap labor, and also it is a lure for the operator out to make "a fast buck."

But as a remedy for unemployment and for new employment to a large volume of unskilled population, the whole effort has been ridiculously ineffective. There are industries operating at a profit, there are those still wondering, and there is a list of companies that have given up and gone home.

After careful examination of the situation in Puerto Rico, one may well wonder how careless can Washington get?

The Popular Democratic Party, controlled absolutely by Governor Muñoz, dominates the insular legislature completely. If Muñoz wants a new law quickly he can get it as fast as Huey Long ever did.

I have examples of some quickie laws.

Opposing the Governor's Popular Party there is the Statehood Party, the most important of the opposing groups. The Independence Party is practically no more than a handful. The Socialist Party, once strong, is now weak.

Election of delegates to Puerto Rico's Constitutional Convention was held while we were in the island. It was announced in advance that the Governor's party would elect 70 delegates and that the minorities altogether would elect 28. And that is exactly the way the vote was—70 to 28.

We talked with one of the leading minority men, a highly intelligent man. "We will have a number of good men in the convention and we will fight hard for a good constitution. Then the steam roller will get going and the Governor's Popular Party proposal will go through," he said.

More and more the word "dictator" is being used, aimed at Muñoz. It is beginning to hurt. At first there was silence, but now there are official attempts to explain that after all the Muñoz government isn't a dictatorship.

GOVERNOR CONTROLS COURTS

A part of every dictatorship is control of the judiciary. All local courts now are controlled by Muñoz through his appointees.

The insular supreme court is the next target and 2 years more will do the trick.

Control of all government agencies is another method of building dictatorship. All key department heads are Muñoz appointees. Many of them were small-time young men around the smaller towns before Muñoz gave them good jobs. Muñoz is an astute politician. He has picked men who have proved their ability and, more important, their loyalty to Muñoz. Every governmental department is under tight Muñoz control.

There is also the Insular Police Force. From this force there is a detachment variously put at from 120 to 150 picked men serving as the Governor's guard, operating around the clock. These men get extra compensation in the form of meals and quarters. This tight guard was established after the riots of 1950, when an attempt was made on the Governor's life. Today when he makes a speech he talks from within a four-sided steel barricade speakers' stand.

LITTLE FREEDOM OF PRESS

When dictators do not dare to be too brutal, there are ways of harassment. In San Juan there are three daily newspapers. Of these, *El Imparcial* is an out-and-out opponent of the regime. The Governor wanted the building in which the paper was published. *El Imparcial* was given official notice to vacate in 20 days. That is a short time, indeed, in which to find housing and to move a newspaper plant. Finally an extension was secured and *El Imparcial* had to buy another building.

The Governor then established his own newspaper, *El Diario de Puerto Rico*. It is beautifully housed.

Then came one of the quickie laws. *El Diario* wanted government official advertising, but it didn't have the circulation. The new law offers this advertising to any paper of general circulation of more than 5,000 copies, which lets *El Diario* under the wire, for it carries plenty of what is customarily juicy plum business. The administration also owns a radio broadcasting station which is used for its own educational purposes. Traveling sound trucks also are used to keep in close touch with the voters.

The third newspaper, but surely not the least important, is *El Mundo*, a fine, middle-of-the-road paper. It doesn't come out against the Government because if it did, inspectors would overrun it the next day, an ex-government official told us. However, *El Mundo* does now and then print some brisk criticisms of certain things.

There enters now another factor. Puerto Ricans and Puerto Rican industries pay no United States income tax. They do pay an insular income tax. The insular income tax is slightly less than the Federal tax would be in like incomes.

One of the habits of dictatorships in their more polite moments is harassing by inspectors. One businessman said he had been bothered so constantly by insular income-tax inspectors that his books were 6 months in arrears. The inspectors kept up a constant demand for more and more records. If you really are in bad, another said, "You may have as many as a dozen inspectors of various kinds in your place all at once."

BIG LOCAL TAX BOOST

Within the past few weeks a new and flaming issue has arisen. It was forecast faintly about 2 years ago when the insular government decided that the time had come for a reassessment of all property. The Muñoz government calls it "scientific reassessment." Most islanders now think the quotes should be this way, "scientific" reassessment.

A Chicago firm was called in for the job. Beginning in August, communities began getting their tax notices under the reassessed valuation. Without exception public mass protest meetings have been held in every community where the new notices have been received.

A banker said that without doubt reassessment was due. The mass protests are caused by the tremendous increases in assessed valuations. Even with a reduced mill rate, most taxpayers are due for a terrific jolt and it was predicted freely that many will be confronted with a confiscatory figure.

Many examples were offered. One was the case of a grocery store which had its assessed value fixed at a figure four times the actual value of the stock on its shelves. A farmer found his cattle valued now at eleven times the former assessment.

Whether the reassessment is or is not "scientific" is open to serious question. That the reassessment can be gerrymandered seems without question.

Tax reassessment notices went first to the smaller communities. There is much wonderment as to what will happen when the new valuation notices reach the population of San Juan.

There were two conceded objectives behind the reassessment program.

One, to increase insular government revenue;

Two, to increase the bonded debt limit of the island.

Both of these objectives mean higher taxes for a population much of which is struggling to make even a bare living, or scarcely above that level.

One highly successful San Juan businessman said sadly, "I don't know what it will mean to this business. We may have to close our doors."

Here could be the political issue fatal to Muñoz-Marín. If it fails to become such an issue it will be because the opposition lacks a sufficiently powerful and willing leader.

It is a strange and contradictory thing that purely political opposition is able to operate freely, but opposition to the economic and industrial program of "the party"—and that is its customary designation—is quite something else. It doesn't appear to be healthy.

As for contradictions, the whole atmosphere is filled with them. On the one hand the Government goes to extremes to encourage new industries to create new jobs in an effort to eat into the very large reservoir of unemployed. New businesses must have their plans and their operation approved by the Government bank and by the Planning Board. And there are some mighty bright boys in those two outfits. Approval extends even to the insurance to be carried and to the placement of that insurance.

On the other hand, the Government seems not to want private industry to build low-cost housing. Public housing is preferred, it is generally believed, as a means of controlling those who occupy public housing. Rentals on public housing are graduated according to income. Such housing cannot be sold, but must be rented.

Private housing can be sold. Home owners customarily have an entirely different outlook from renters and this is in Puerto Rico as it is elsewhere.

San Juan municipal and insular housing is a drop in the bucket when compared to FHA and privately built housing. The city of San Juan built a group of low-rental houses on dock-side property, ostensibly so that dock workers would not have to pay bus fare to and from work. Few dock workers now live there, but put to proper use the lots would have a value of about \$10,000 each. So goes dictatorship and so goes bureaucracy.

In 12 years the United States FHA has built 20,400 living units and it has had but 8 actual foreclosures.

AMERICAN BUILDS 10,600 HOMES

No inquirer can be in Puerto Rico more than a few days before beginning to hear of Leonard D. Long, an American from Charleston, S. C.

L. D. Long (the "D" stands for Darlington) is a private builder. He has provided

more jobs for workers than the entire "bootstrap" operation of the island's subsidized industry. His biggest development is Puerto Nuevo—4,428 small concrete homes on the outskirts of San Juan. His houses were built to sell—and all were sold—for \$3,995, with payments of \$30 per month. All told, Long has provided Puerto Rico with 10,642 individual family homes. Most of these are so planned that easy expansion in any of several ways is possible. But the party doesn't care for private housing and so L. D. Long finds many and varied obstacles in his path.

Long has employed as many as 10,000 native workers at a time, and he has paid some \$18,000,000 in wages over the period of his operation. His expenditures for materials bought in Puerto Rico have been enormous.

There is one puzzling factor in the Long operation. His success was so striking that for a time there were indications that "the party" might break down and give him full headway. He was asked by Muñoz Marín to submit a plan for a development of 30,000 more small homes. Long submitted the plan. The governor used it in his campaign, but it has not been heard of since.

If Long were less determined to provide housing for family ownership, he would leave the island. But, viewing the jobs he has created, it may be that "the party" will take a careful last look before putting in his pathway the final obstacle to operations. Long actually has done in construction what Henry Ford did years ago in putting automobiles together. Here is a striking example:

The local government's development company built the luxury hotel, Caribe Hilton, at a cost of at least \$7,500,000. Some say it ran to a million more than that. Long has nearly completed the Darlington Apartment Hotel, a half dozen blocks away, at a cost that will run to about \$3,000,000. The Darlington ground measurements are larger than the Caribe Hilton, and it will be two stories higher.

The excuse for excessive cost of the government hotel is that it had to be rushed to completion, and that, after all, it is a paying tourist attraction, as operated by the Hilton hotel chain. A gambling casino in the Caribe helps to make it pay.

UNITED STATES CONTRIBUTES A BILLION PLUS

The United States has put into Puerto Rico, through one channel or another in the past 8 years, a grand total of one and three-tenths billions of dollars, and more goes in every day. "Operation Bootstrap," up to the beginning of 1951, has created exactly 5,659 new jobs. These figures, forgetting all others, indicate that somewhere there has been some fancy dreaming—and there has been.

Some of the fancy dreaming is a hang-over from the regime of former Governor Rex Tugwell, many of whose luminaries still function. Puerto Rico's 2,300,000 citizens still know a poverty that is primitive and disgusting. New housing has made some slight inroads on the fantastic partially submerged slum lands, where huts stand perilously on stilts along the water's edge. The government owns the fabulous Caribe Hilton Hotel, and it also owns the land on which stand these rickety slum shacks. These slums bear such names as *El Fangito* (the mudhole), *La Perla* (the pearl), and *Hato Rey* (King's farm).

A hotel maid was asked what she earned per week. She said \$12.60. Her husband was able to get work about half the time. They never had meat to eat. They lived in the "Mudhole" slum. Official estimates say there are about 34,000 slum dwellings in the San Juan metropolitan area.

Much is made of free medicine. But hospital facilities are so limited that at best only a pitifully small number can get such care.

In contrast, the New York Hamilton Wright firm, which has publicized Canada

and European countries, is said to get \$125,000 a year for doing likewise for beautiful Puerto Rico whose hill-folk and city workers cannot even dream how much money that might be.

TWO HUNDRED FIFTY-SEVEN THOUSAND CHILDREN WITHOUT SCHOOLS

Puerto Ricans are kindly folks. They are not lazy. The workers do not have backgrounds of modern skills. When they come down out of the hills they do bring with them such rural customs as going home from the job when it rains. But they can be given training and, properly done, training brings results. Industries, wisely run, can make money. Language barriers baffle others. Bureaucratic interference and "the party's" politics baffles and defeats other firms—some of them even before they start. The promise of tax exemption and of low wages is partly something like bait for fish. Many find that low wages do not need to mean low labor costs.

For Puerto Rico there is no quick and easy cure. Land is limited. When one person dies four are born. The crowded island's birthrate is 60,000 a year. For 257,853 children of school age there are no schools at all.

Yet, the Governor has spent millions to sell the United States on his administration, including expensive "red carpet" entertainment for invited United States officials and press. It is said locally, by good authorities, that Governor Muñoz spent something over a million dollars on his inauguration celebration alone.

If there is a crime against Puerto Rico and its people it is the pretense that there are bootstraps by which there can be miraculous extraction from a deep-seated and long-existent sea of economic, political, and social submersion.

Meanwhile, United States taxpayers are paying the bill.

Give Our Troops in Europe a Chance

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mrs. ST. GEORGE. Mr. Speaker, ever since I have been in Congress I have worked and voted for a large and powerful Air Force. Like many others I was dismayed when the sums voted for a 70-group Air Force by the Eightieth Congress were impounded and not used for that purpose and the will of the people through their elected Representatives was flouted.

We are fortunate in having in the House a chairman of the Armed Services Committee who is a patriot and also a man of vision.

Like all such men he is working for a greater and more powerful Air Force. It is my hope that the House will support him in every way in this high purpose. The following article appearing in the September issue of the Reader's Digest gives expert and sound arguments for building for air supremacy. In the words of the author Francis Vivian Drake:

In Poland and France, in the skies above England, in the wheat fields of Normandy and Western Germany, in the jagged hills

of Korea, the lesson has always been the same—air power is essential to survival.

[From the Reader's Digest of September 1951]

GIVE OUR TROOPS IN EUROPE A CHANCE

(By Francis Vivian Drake)

The past 12 months have made it painfully clear that we plunged into Korea without a plan, and with little preparation for safeguarding our men against heavy odds on the ground. That is over the dam, but our soldiers have paid for it with high casualties—one out of every four men in Korea.

Today we are preparing to commit troops in Europe on a much greater scale, but with no realistic plan for safeguarding our soldiers against infinitely heavier odds in the air.

General Eisenhower is trying to raise an army of 50 divisions for the defense of Europe; the United States is to supply at least 6 of these and our men are now being drafted for the purpose. This army is to be ready sometime between 1953 and 1955. Without debating the wisdom of sending our troops to Europe at all, one thing stands out prominently: That we are making no adequate provision for protecting these troops from air attack.

Stalin, who has said that the bravest men are helpless if they lack air protection, is providing his troops with a modern air force of 20,000 planes, of which 10,000 are to work with his ground forces. To protect our soldiers we have only a few hundred planes available and are to have less than 3,000 at the peak, and that not until 1953.

This example of unrealistic planning moved Senator HENRY CABOT LODGE, JR., himself an infantryman in the last war, to make a thorough investigation of our program for the defense of Europe. His finding, that in case of war our men will be sent into battle "naked in their underwear," to be slaughtered like animals, just as the Reds have been slaughtered in Korea. This alarming situation is reflected in the statements of our air leaders.

Gen. Carl Spaatz (commander of our Air Forces in Europe in the last war) calls the air odds against us "nothing short of appalling," and warns that Western Europe will become a huge trap for our soldiers.

Gen. Hoyt Vandenberg (present Chief of Staff) says that "we have only a shoestring Air Force today," and that our plan of procurement is "only a stepping stone" toward what is really needed.

John A. McCone (Under Secretary for Air) declares that "the strategic Air Force is not keeping pace with our atomic development . . . the tactical Air Force will not be sufficient to gain the air superiority which our ground forces must have in order to operate with hope of success."

These are only a few of many statements uttered by men who have access to our plans, and some of whom have defied the administration's gag on "uncleared statements" in order to warn their countrymen.

In face of our own deficiency in the air it might be supposed that the administration is relying on Europe to provide the planes necessary to protect General Eisenhower's army. But this cannot be. Here is a comparison of the resources of Europe and the United States.

Plane potential for next 2 years:

Europe	5,000
United States	50,000-75,000
Population:	
Europe	380,000,000
United States	150,000,000

The figures given above represent our potential. But the planes that are so vital for our troops in Europe, that could be produced long before General Eisenhower's army is ready, that could block the Red air force and might prevent the successful invasion of Europe, are not on order.

We continue to ready up divisions which will get there late, instead of planes which could get there early—perhaps early enough to avert war altogether.

We are, in fact, trying to produce too many of the wrong things too soon, trying to conceal the mistakes of past years with cataracts of oratory which explain nothing. The Government has committed over \$60,000,000,000 for defense, yet the essential of air cover for our soldiers has been ignored. What does it take to convince the administration that sending troops to Europe without air cover is an act of suicide?

DOES IT TAKE OBJECT LESSONS?

Object lesson No. 1 has been Korea, where the enemy, without air protection, has suffered over a million casualties. According to Supreme Headquarters in Tokyo, approximately 47 percent of these casualties have been caused by our small Far Eastern Air Force. Using jellied gasoline, single planes have burned to death as many as 800 Chinese in one flight, and although the enemy has the advantage of hilly country and bad weather and is well armed with anti-aircraft guns, machine guns, tanks and artillery, they have lost as many as 10,000 men in a day, without being able to shoot down one of our planes. On our side the infantry has been the first to say that it would have been cut to pieces without air cover. In Korea the lesson is that air power has saved our bacon.

The previous object lesson was in Europe. Before the invasion of Normandy, General Eisenhower insisted on the destruction of the German air force. He declared later that the entire invasion would have been impossible without control of the air. Before the march from Normandy to the Elbe, Gen. Omar Bradley's Twelfth Army Group (almost exactly the same size as General Eisenhower's army now forming) was supplied with 6,000 tactical planes and vast bomber fleets of the Eighth and Fifteenth Air Forces. Bradley had several times the air cover today being planned for Eisenhower, although he had negligible air opposition. And certainly no one ever suggested we had too much air support.

The object lesson before Normandy was provided by Hitler. Using almost the identical combination of armor and air power as that of the Red forces of today—although on a far smaller scale—he swept from Poland to Western Europe and pushed the British into the sea at Dunkirk. But even Hitler underestimated the number of planes he would need to capture control of the British skies. Had he possessed sufficient planes, he would probably have won the war there and then.

All these object lessons point to one thing: The truth of what our air leaders keep trying to tell us. In Poland and France, in the skies above England, in the wheat fields of Normandy and Western Germany, in the jagged hills of Korea, the lesson has always been the same—air power is essential to survival, whether of armies or of nations. What further object lesson does it take? Bombs falling on the homeland? Our newest troops massacred on the plains of Europe?

DOES IT TAKE UNBIASED ADVICE?

President Roosevelt, shortly before his death, set up a large group of eminent civilians to make an independent report on the lessons which the United States might learn from World War II bearing on its own future defense. This group, the United States Strategic Bombing Survey, inspected Germany and Japan at the close of the war and unanimously reported that air power would henceforth have to be outstanding in our national defense. "Even a first-class military power," they reported, "cannot live long without control of the air." The survey, to all intents and purposes, has been ignored.

Another independent survey, the President's Air Policy Commission, formed in 1947, mapped out a detailed blueprint of our air requirements. Our Air Force, it reported, was not only inadequate but "hopelessly wanting in respect of the future." Its recommendation—a minimum Air Force of 130 groups, composed of 20,500 modern planes. The President ignored this report. The existing Air Force was later reduced.

The following year a Congressional Aviation Policy Board made still another survey. It recommended the same 20,500 modern planes. This was also ignored.

For the past 6 years, independent advice has overwhelmingly urged the maintenance of modern air power. In spite of this advice, our invincible 78,000-plane Air Force of 1944 was consistently reduced to a total of under 3,000 modern planes in 1950, and production was dropped from 9,000 planes a month to a trifle over 200. As a result of this obstinate refusal to accept counsel from Congress, the air officers, or the civilian experts, the Korean War caught us with only a handful of modern planes. During the recent MacArthur controversy about bombing enemy bases in China, it was several weeks before politicians got around to asking General Vandenberg whether, in fact, he had enough planes for the job. His answer was "No." He had not enough planes unless he exposed the United States to attack without power of reprisal. Whatever its professed reasons for refusing to approve MacArthur's proposal, the administration had failed to provide enough planes to make such an operation possible. It smoke-screened this negligence by taking the position that it did not wish to carry out such bombing anyway.

DO WE NEED ADDITIONAL CAPACITY?

The stated goal of the administration is an Air Force of 95 groups, of which only 80 will be combat groups, totaling about 5,000 modern shooting planes. This is far below our productive capacity. The following is the production now scheduled by the administration compared with the production offered by the aircraft industry:

Planes ordered:	
Fiscal 1952.....	8,000
Fiscal 1953.....	11,000
Production available:	
Fiscal 1952.....	12,000
Fiscal 1953.....	36,000-50,000

Planes actually on order include all types, combat and noncombat, and are to be divided between the Navy, Army, Military Air Transport service, mutual defense assistance program and the Air Force. After providing planes for our Pacific bases, our allies, our Atlantic bases and our homeland, these orders provide a completely inadequate force of tactical planes for the protection of our troops in Europe.

The Under Secretary for Air states that "production of air power in sufficient quantity to make the United States supreme in the air can be achieved much faster than is popularly supposed and now planned." Admiral De Witt C. Ramsey, head of the Aircraft Industries Association, says that "the aircraft manufacturing industry is presently building airplanes at a rate substantially below its potential. As a matter of fact, the rate of increase of our present production is less than 50 percent of the rate we were able to achieve in World War II." Donald Douglas, perhaps the greatest of our plane builders, says: "We have the technical skill, the industrial capacity, and the national will to do the job if we are not sidetracked or distracted from the task by indecision and uncertainties."

It will be remembered that during the last war President Roosevelt asked for double the production offered by the aircraft industry. Faced with a grave emergency, the maximum production President Truman has ordered—2

years hence—is only 1,000 planes a month compared with the 9,000 a month ordered by President Roosevelt.

It is completely within our power to move up our schedule from 80 to 150 combat groups. If we do so, we shall have created the three greatest deterrents to aggression in our power to produce within the next 2 years:

(a) A real defense force for our homeland—something we do not have today.

(b) A real tactical Air Force of over 5,000 modern planes available for the protection of our troops in Europe, with power to reinforce them rapidly in case of war.

(c) A real strategic air command, strong enough to destroy the Red atom-bomber bases and the sources of Soviet power—oil, chemicals, armament production, and communications without which an army cannot function.

The building of such an Air Force will be no easy task, but fortunately we have immense and well-equipped factories left from the last war. The planes will cost roughly twice as much as if they had been bought when they were originally recommended by the two Air Commissions. But, if we send troops to Europe at all—and we have several divisions there already—we must give them air cover if they are to survive.

We are the only nation capable of providing adequate air protection for the North Atlantic Treaty armies. We have the plants. We have the skilled workmen. It is surely more urgent to produce planes for the minimum protection of our troops than to keep adding to the total of men already "naked" in their underwear in Europe. We can better serve our allies and the cause of freedom by sending over armed planes rather than unarmed men.

WHAT MORE DOES IT TAKE?

The air leaders, the civilian advisers, the producers, the headlines have all failed to move a laggard administration into action. It would seem that only a single force remains untried—the compelling voice of public opinion. It is the public's sons, husbands, brothers who will have to pay the price in the event of war, whose unarmed heads will be exposed to the same pitiless punishment with which air power has mowed down the Reds in Korea. Our young men have to do the fighting for us. The least we can do is to see that they get the best protection our country can produce, even if it means raising such an outcry that it bends in every window in our Capitol. It has become the responsibility of the individual. Tell the President and your Congressman how you feel about it. Nobody else can do it for you.

Civitan International Foresees Socialistic Trends Where Government Operations Compete With Private Enterprise

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. SCHWABE. Mr. Speaker, we are all aware that Civitan International is one of the great civic organizations of the world. Its activities are not limited territorially nor circumscribed by any political party or organization. Its motto is "Builders of Good Citizens."

I was an active member of Civitan International for many years, and I cannot imagine how any patriotic Amer-

ican can find fault with the principles of this great organization, the work it has done and the programs it sponsors.

Civitan International held its annual convention in Jacksonville, Fla., June 20, 1951. At that convention it adopted a resolution in which Civitan International foresees socialistic trends where Government operations compete with private enterprise.

This resolution is most timely. In fact, it is long past due, and I congratulate the delegates attending the Jacksonville, Fla., convention of Civitan International for unanimously adopting such resolution. It is American in language and in all its implications. I am delighted to give my colleagues and those who may read the CONGRESSIONAL RECORD the benefit of the thinking and the warning of this resolution and of the members of Civitan International, which follows:

SEPTEMBER 10, 1951.

DEAR CONGRESSMAN: The following resolution was adopted by unanimous vote of the delegates in attendance at the annual convention of Civitan International held in Jacksonville, Fla., June 20, 1951.

"Whereas we regard with grave concern the socialistic trend of our governments to enter into competition with private enterprise and the enormous waste which is inevitable in government operations; and

"Whereas the Federal budgets contain appropriations for many projects which would further inject our governments into competition with private enterprise; and

"Whereas the expenditures for such projects come at a time when citizens are being asked to make sacrifices to arm for defense, and they are called upon to pay the highest taxes in the history of our Nations, and

"Whereas we believe that government operation or subsidy of industry or business is socialistic and contrary to the interests and wishes of the people of the United States and Canada and will not only hinder industry, but will eventually destroy the private and free enterprise system through which our countries have grown great: Now, therefore, be it

"Resolved, That Civitan International urge our respective governments to oppose any legislation or the appropriation of any funds for socialistic experiments, the direct or indirect use of which put the government in competition with its own citizens or would further the nationalization of any business or industry; and be it further

"Resolved, That copies of this resolution be sent to (1) all Members of the Congress of the United States, (2) all members of the House of Commons, (3) each club of Civitan International, and (4) the home offices of all other civic and service organizations in the United States and Canada."

Respectfully submitted.

RUDOLPH T. HUBBARD,
Secretary.

Lower Marias Irrigation Project

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWARD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. D'EWARD. Mr. Speaker, a recent issue of the Saturday Evening Post contained an article criticizing severely

the Lower Marias irrigation project in Montana and, by inference, the Bureau of Reclamation's plans for development of water resources for irrigation, flood control, and related purposes. The article has created considerable indignation in Montana among people who know the value of irrigation and who have been interested in the development of the Lower Marias area. I include the letter and two editorials dealing with the facts of the case as stated by local citizens in my remarks:

[From the Havre (Mont.) Daily News]

ATTORNEY FOR MARIAS IMPROVEMENT ASSOCIATION WRITES SATURDAY EVENING POST EDITOR ABOUT ARTICLE

Harry Burns, Chinook attorney, has written Ben Hibbs, editor of the Saturday Evening Post in regard to the article, 'The Big Water Gyp in Montana,' by Edmund Christopherson, appearing in the August 25 issue of that magazine.

Mr. Burns is attorney for the Irrigation district proposed by the Marias Improvement Association which is the subject of the article.

The following is the letter sent Mr. Hibbs by Mr. Burns:

"DEAR MR. HIBBS: The article of Mr. Christopherson entitled 'The Big Water Gyp in Montana' published in your issue of August 25 is evidence of the fact that a half truth or a quarter truth is more damaging and confusing than an outright falsehood. Obviously this article was written and published by the Post with the idea of criticizing the methods of the Reclamation Service. There are few total falsehoods in the article, but the over-all impression it gives is entirely false. If Mr. Christopherson and the Post had wished to be fair in their treatment of this matter, the article would have stated that the Marias project was the brain child of one William Cowan, of Box Elder, Mont., a rancher and stockman of that area who conceived this in 1898 and through whose untiring efforts, coupled with those of many other builders of northern Montana, finally pushed it to a successful climax by the court decree of June 7, 1950, establishing this district. Bill Cowan was fortunate in two particulars, first he lived to see the successful climax of his efforts in the creation of the Marias irrigation district, but died before being accused by one of the leading publications of the country of being a gyp.

"If fair, your article would further have stated that at no time was there any intention on the part of the proponents of the district to force any section of the territory into the district where the majority of the landowners wished to be excluded and the court record affirmatively shows this at the very commencement of the hearing. The record further shows that another group not mentioned in your article, these being the farmers owning land under the proposed Big Sandy canal, were voluntarily excluded without court representation or fight. Furthermore, this court proceeding lasting some 10 or 11 days was not a bitter fight but one held principally for the laying of the foundations to enable the court to establish this district and the final lines decided upon were considered by both the proponents and the objectors to be eminently fair and I am confident that everyone left the courtroom at the end of the hearing feeling that they had been treated fairly. Furthermore, opposing counsel, Mr. Randall Swanberg was entirely fair and unprejudiced in this case and one of the finest gentlemen that I have had to deal with at any time in court, and your article is entirely misleading as to the character of this hearing.

"At no time did the Reclamation Bureau or its attorneys take any direct part in this proceeding and such part as was taken by

them was entirely at the request of the proponents of the district. The president of the Marias Improvement Association is and was the Honorable C. B. Elwell, judge of the district court of this district, and one of the most respected jurists of the State of Montana.

"If fair, the article should further have emphasized the fact that over 80 percent of the residents of the area of the district as finally established by Judge Speer wanted water delivered to their lands at the earliest possible date. It would further have stated the fact that the delivery of water to these lands will mean a stabilized agriculture for all time in the future with the raising of thousands of cattle and other livestock where none are now raised because of uncertainty of feed supplies.

"I have long been a partisan of your magazine and have generally entirely agreed with your editorial policy and have enjoyed most of your special articles. The tragedy of this to me personally is the fact that it has done something to destroy my confidence in your policy, and to wonder how many other articles published by you in the past can be believed as the truth or have in fact been yellow journalism as this article is. In the early twenties you published an article by Gareth Gareth, entitled 'The Pain in the Northwest,' which dealt with this same territory and part of Montana. If you could have published the Gareth article alongside of Christopherson's it would have been a good example of the art of inconsistency in journalism. Is your article further proof of the apparent inability and lack of desire of the East to understand the problems of the States of the West?

"Very truly yours,

"HARRY L. BURNS."

[From the People's Voice of August 31, 1951]

SAT EVE POST CARRIES ON

Honored old Ben Franklin from his very special spot in the celestial heavens these days must be saddened over how far from the narrow path of truth and righteousness has strayed the publication he sired almost 225 years ago.

Ben Franklin would never knowingly have permitted four false or misleading statements to appear in any headline that he might have written. Nor would he have ever stooped to the Hearstian journalistic tactics employed by one Edmund Christopherson in writing his article 'The Big Water Gyp in Montana' (Post, August 25). Such a verbose piece of distortion Franklin would have placed where it rightfully belonged—in his circular file. That would have been the end of it.

Not so, the editors of the Post 225 years later. As with past articles critical of the West and western reclamation, the Post editors of 1951 prefer to mislead millions of Americans into opposing congressional appropriations for developing and utilizing the West's most precious resource—its water.

Let's take a look at that misleading "bank" headline under the title "the Big Water Gyp in Montana." Quote:

"These Montanans, offered what seemed to be a splendid gift—water for 127,000 dry acres—took a second look and found the Reclamation boys wanted to turn them into peasants. Whereupon they hauled the Bureau into court, made it get out of their area and stay out."

Misleading assertion No. 1: "These Montanans, offered what seemed . . ." They weren't offered anything. Residents of the Lower Marias for half a century have been after Reclamation to come in and construct an irrigation system. As early as 1898, William Cowan, father of Lower Marias project, who died just last January, began probing the idea of bringing irrigation to his area. First formal steps toward setting up a

project came in 1904, at the instigation of people of Lower Marias area.

Misleading assertion No. 2: "The Reclamation boys wanted to turn them into peasants." Bunk. The several large operators who did not wish to come under the project because of Reclamation law's 160-acre limitation, and for other reasons, were fully protected by State laws which in so many words say (Ch. 89-1201-4 Rev. Codes 1947): any landowner, up to the time of an irrigation district being formed by a district court, may be excluded from the district if he can show that inclusion will damage him financially, etc., etc., etc. Of course, if such landowner did not desire to be excluded, he would have to abide by the 45-year-old reclamation acreage limitation. Experienced irrigation district attorneys tell us that Reclamation Bureau has meticulously observed Montana State laws safeguarding landowner rights, at all times.

Falsehood No. 1: "Whereupon they hauled the Bureau into court." Tain't so, brother, tain't so. To the point Reclamation was not a party to the court action. The big court fuss that Christopherson went into journalistic ecstasy over was 99 percent figment of his imagination. The truth was in the statement by Harry L. Burns, Havre attorney, in a letter of protest to the Post over the article. Said Burns:

"Furthermore, this court proceeding . . . was not a bitter fight but one held principally for the laying of the foundations to enable the court to establish this district and the final lines decided upon were considered by both proponents and the objectors to be eminently fair . . . At no time did the Reclamation Bureau or its attorneys take any direct part in this proceeding."

Falsehood No. 2: "Made it get out of their area and stay out." Reclamation is going ahead, with the blessing of 80 percent of the landowners of the lower Marias, and is establishing an irrigation system for upwards of 120,000 of the 127,000 dry acres.

There are many other false and misleading statements in the article, but these four should suffice to emphasize the value of the article as so trenchantly put by District Judge C. B. Elwell, president of the Marias Improvement Association: Quote:

"I have read the Saturday Evening Post for years. It is seldom that you find them making three mistakes in one article.

"Their first mistake was in being 'gypped' into buying such an article.

"Their second mistake was in publishing it after they had been 'gypped' into buying it.

"Their third mistake was in listing it in their table of contents at the front of the magazine. It should have been listed under the first heading of 'Short stories' along with the rest of the fiction."

[From the Havre (Mont.) Daily News]

BIG CHIEF PLENTY NONSENSE IS LOOSE AGAIN

Our esteemed colleague Herb Watts has already opened the throttle fairly wide in discussing the "big water gyp," but because of the gravity of the matters involved this writer also feels impelled to have his say.

Not since Gareth Garrett wrote 'The Pain in the Northwest,' likewise in the Saturday Evening Post, has there been such a rumpus. Strangely enough, it was the same "triangle" which drew the Post Blast—the area which extends roughly from Chester to Havre and southward to Great Falls. Gareth Garrett concluded, to the noisy dismay of local patriots, that the region should be turned back forthwith to the nearest Indian silly enough to accept it. Now comes Author Christopherson saying that the Bureau of Reclamation has concocted a foul plot to steal it back from the Indian or from the plutocrat ranchers who apparently inhabit it. What goes on here, anyway? A quarter century has

passed since Garrett flung the first rock at the Triangle and still the game continues. The region seems to be a fairly newsworthy spot, doesn't it?

As one who for many years has been associated with such Marias boosters as the late Bill Cowan, Judge Charlie Elwell, hundreds of water-hungry farmers and the combined pressure of goodness knows how many community fronts, we dislike to see this region torn asunder by another magazine article so openly tinted with malice, but if the boys wish to feud, we'll feud with 'em.

After tempers have cooled there emerge three points which should be clearly understood. First, the reclamation service did not come barging in with a club in 1950 demanding that this region be irrigated; the idea originated locally more than 30 years ago as a combined farm-town project in which far more farmers than town people were involved. Second, instead of rushing in with the glad hand, the reclamation service for decades gave the plan the push-around. Third, as far as we know there is no law compelling any organized community to enter an irrigation district against its will. So in some amazement all we can say as an individual is, "Why all the rumpus?"

In this discussion we are by no means fronting for the reclamation service. Current history proves this outfit well able to fight its own battles. Some of the organization's latter year activities we do not approve, as an individual, yet the 50-year record shows that in spite of all the published difficulties of irrigation farming, crops and families and towns bloom in parts of 11 Western States where cactus, gophers, and similar desolation reigned supreme previously. That is the picture we should keep in mind, isn't it?

Without these reclamation projects a good many of us who now stumble along more or less contentedly in these Western States might even be reduced to living in Philadelphia where the Saturday Evening Post is edited. Which would be the well-known fate worse than death to anyone who has ever lived in Philadelphia.

The Post is a great magazine, partly dedicated in recent years to exposing and exploding the notion that a nation is different from an individual—neither can permanently spend more than it receives without facing ultimate disaster. Lots of us agree with that thought. We also agree that in this instance the Post's drum-beating zeal led it out onto a long limb which is rapidly being sawed off.

It is a human trait for the humble to snicker when the mighty are embarrassed, so let's have our fun, indulge our peevish and get over it. "The triangle" survived Garett and struggled on to new prosperity. It will also survive author Christopherson and the Saturday Evening Post. So let's part on friendly terms with the Lonesome Prairie recessionists, close up the ranks and proceed with the Marias project.—J. R. L.

Tribute to General Marshall

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. PATTERSON. Mr. Speaker, it is unusual in these times to greet the retirement of a public servant with the genuine regret which is felt in General

Marshall's leaving his country's service. He is held in the highest esteem by those who have had close contact with him. The general earned universal respect in his devotion to duty through military and civilian service. An excellent soldier in World War II. General Marshall took on civilian tasks in the service of this Nation when he might well have rested on his laurels. Even after retirement as Secretary of State he heeded the call to duty, and returned to active duty as Secretary of Defense.

We on the Armed Services Committee are aware of his intense devotion to country, and his realization that potent forces threatened the peace of the world. Only through General Marshall's insistence has a program of universal military training been authorized by Congress. He can be proud of his accomplishments in this office, and may retire with the accolade of a job well done.

Forces Balanced on the Basis of Top Priority Tasks, the Only Kind of Military Establishment the National Economy Can Afford

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. PRICE. Mr. Speaker, I am sure that most of you have read in the newspaper excerpts from the remarks made by the Secretary of the Air Force, Mr. Thomas K. Finletter, at the Los Angeles convention of the Air Force Association. The association is only 5 years old, but it is flourishing. It counts among its members and its leaders some of the most distinguished men in the country. The convention was an important one. Mr. Finletter's speech on Saturday afternoon, August 25, was the high point of the occasion and a clear, frank, and concise report to Air Force veterans on the structure and status of the Air Force.

One thing Mr. Finletter said in his address struck those who heard it, and especially the astute reporters whose job it is to pick up news as a revelation of a possible new use of atomic weapons. Mr. Finletter said:

Here we are entering into new terrain and we shall use all the imagination we possess to see to it that effective use will be made of atomic weapons against profitable targets in the ground battle area. And it is not too much to hope that if we put the proper effort of industry into this operation and if we have sufficient imagination to detach our minds from past conditions of warfare, we may be able to assure our European allies of a much greater striking power on our part than we had hoped for, and even, indeed, make it unlikely that an enemy attack on the NATO forces on the continent of Europe would have a hope of success.

What made headlines in the papers, however, was but preliminary to an

equally important statement by Mr. Finletter on the nature of the defense establishment of the future. Less sensational than statements about atomic weapons, Mr. Finletter's carefully worded, well-reasoned discussion of balanced forces has significance for all thoughtful Americans, and especially for the Members of this Congress. Too often the term "balanced forces" has been used to mean an Army, a Navy, and an Air Force of equal size. As Mr. Finletter pointed out:

This term "balanced forces" is an example of a good phrase that has gone wrong. For it has come to mean in the minds of many the idea that the defense dollar should be divided equally between the three departments which make up the Defense Establishment. This never was the intention of the men who first used the term. Anyone can accept the term "balanced forces" if they interpret it in its right meaning, which is that in these days with a military budget already at \$60,000,000,000, nothing less than a most exacting calculation of forces in relation to the top priority tasks these forces have to perform can be used for the basis for determining the kind of military establishment the country should have.

As a responsible and thoughtful public servant, Mr. Finletter is constantly aware of the effect of mobilization on the national economy, and of the need to use material as well as personnel economically, allocating both on the basis of priority needs. In his address to the AFA convention, Mr. Finletter went on to say:

Perhaps in the past we could afford to have military units which were not strictly necessary on the day war starts or during the period immediately thereafter, or were not calculated to meet the top priority needs of ourselves and our allies. Now we have to calculate the things which are the musts—that is, the tasks which are indispensable to our great purposes of deterring war and of seeing to it that if war comes this country and its vital interests are protected. Then we must calculate how we can use most effectively not only our presently available resources to accomplish these results, but also the resources we will have in the future from 2 to 4 years from now. We must then allocate the planes, tanks, and ships, and the men who man them, to create an integrated force which will be able to accomplish these top priority tasks with the most devastating effect. Only then can we think in terms of secondary tasks, things which we might desire to be able to do but which are not indispensable to our great and primary purposes. And I venture to believe that we will not be able to devote much if any effort to these secondary tasks.

World War II cut heavily into our resources of manpower, raw material, and industrial facilities. From this point on, as Mr. Finletter well understands, we must give increasingly serious thought to the sobering fact that all our resources are limited. Military strategy based on this realization will not produce an army, a navy, and an air force equal in numbers, with closely matched budgets. But a wise strategy, based upon a wise and economical use of our total and limited resources, will produce balanced forces welded into an invincible defense team.

I ask unanimous consent to insert Mr. Finletter's address at the Air Force

Association's Fifth Annual National Convention and Reunion, in the CONGRESSIONAL RECORD. The remarks are as follows:

ADDRESS BY SECRETARY OF THE AIR FORCE
THOMAS K. FINLETTER, AT AIR FORCE ASSOCIATION'S FIFTH ANNUAL NATIONAL CONVENTION AND REUNION, LOS ANGELES, CALIF., SATURDAY, AUGUST 25, 1951

It is my privilege to read to you a message to the Air Force Association from the President of the United States:

AUGUST 21, 1951.

MR. ROBERT S. JOHNSON,
President, Air Force Association,
Washington, D. C.

DEAR MR. JOHNSON: It is a pleasure to offer congratulations to all members of the Air Force Association on the occasion of this national convention which celebrates their fifth anniversary as an organization.

I recall the day 5 years ago when I greeted several of your leaders at the White House shortly after your association was established. I am delighted with the progress you have made in this relatively short period in banding together Air Force veterans with the common mission of adequate defense for national security and world peace.

I believe that the mission of the Air Force Association is more important today than ever before. While our armed might is greater than it was at the time of your founding, so is the threat to freedom greater. Nothing must permit us to deviate from our mobilization objectives.

If in the year ahead the Air Force Association will continue to help keep our people alert to the dangers we face from militant aggression, and will help prevent any slackening of interest or effort in our military preparedness program, you will be doing the Nation a great service.

Very sincerely yours;

HARRY S. TRUMAN.

The Air Force Association on its fifth anniversary is entitled to pride in its accomplishments. Your conviction that an adequate air power is essential to our national security and that the creation and maintenance of this air power is everybody's business led to the formation of this association. You set yourselves the goal of improving the public's understanding and support of a sound air power policy for the Nation. Your contributions to this end are evident in current expressions of opinion by the leadership and the rank and file of the American people on the subject of air power and its relation to the security of the free world.

In paying tribute to the work of your association, I also pay tribute to the members of the Air Reserve and the Air National Guard and the other civilian components that go to make up so large a part of your membership.

Mr. Zuckert has already told you of the high regard and appreciation of the Department of the Air Force for its civilian components. I underscore Mr. Zuckert's remarks of the high importance of the civilian components.

I also endorse the new long-range reserve plan which Mr. Zuckert outlined to you last night. I have great hope that it will be of substantial value not only to the security of our Nation, but also for the members of our Reserve forces.

Even though Mr. Zuckert has dealt fully with this subject, I do want to reemphasize that we are aware of the great burden which is falling upon the Reserves—and when I speak of Reserves, I refer to the Air National Guard and the Air Reserve collectively. This crisis has been particularly hard on the Reserves. They had not expected to be called to serve in this particular kind of situation. They had committed themselves to train in order to be ready for a major

war. They had not expected to have their lives and careers disrupted for anything less than a major war, and yet it has been necessary that they should serve now when the country is not engaged in full-out conflict for survival. Grievous as the war in Korea is, it is not that.

Also, we have not been able to carry out the rotation system that we would have liked. The war in Korea from this point of view must be regarded in two phases. The first phase was that of build-up when we were compelled to keep individuals and units in the battle area longer than a proper rotation system would have called for. This was in the period of build-up. There was nothing else that could be done if the necessary amount of American power were to be made available for the Korean conflict.

However, we are now reaching the stage where a more equitable rotation will be put into effect. By the early part of September we hope that the rotation of combat crews and of other personnel in the Korean area will have reached the proper standard. In the case of combat crews, General Weyland will be able to effect a rotation calculated on the basis of the number of combat missions flown and on other factors which he and we are prepared to say is satisfactory. The same thing is true of the other personnel. The time of service for the personnel other than combat crews will vary with the geographical location. For example, in Korea, it will be 18 months' total service, whereas in certain areas it will be higher than that as conditions are less exacting than in the actual combat area. Then, of course, the provisions of the existing law provide that personnel called to active duty involuntarily from the Organized Reserves will not be retained longer than 24 months, while those called from the Voluntary Reserves may not be retained longer than 17 months.

It may be of interest for you to note here that legislation has been passed by the House in connection with the appropriations bill for the armed services which would reduce the tour of duty for those called from the Voluntary Reserve from 17 months to 12 months. Another interesting sidelight is in the proposed bill before Congress which provides for fixed contractual periods of service for reservists serving with the Armed Forces. These contracts may be from 1 to 5 years' duration. May I emphasize that this is proposed legislation and has not yet become law.

The Reserve components, in short, have been called upon to make heavy sacrifices for their country. Their work has been indispensable to the success of our air effort in Korea. It could not have been done without them.

I will say a few more words about the Korean situation. The success which has been achieved by the United Nations in Korea would have been impossible without air power. Air power has definitely established itself as an important part of collective action for peace. On the other hand, the situation in Korea has been special. There has so far been comparatively little opposition to the supremacy of United Nations air. To be sure, there have been vigorous battles over the northwestern area, but so far the enemy forces have not seriously challenged our supremacy over the battle area. We must therefore be careful in our appraisal of the results in Korea not to reach conclusions which are based on the very special circumstances that the first tactical objective of air power—namely the obtaining of air superiority—has been ours with relatively little effort. We must remember that in any plans that we make for the future that this is the first condition to be attained and that the further operations of isolation of the battle area and close support can be accomplished only if there has been already obtained a condition of air supremacy.

We must, however, be aware of the fact that this air supremacy of ours could have been challenged at any time within recent months by the enemy forces. The enemy has a considerable force of air which it has not used. The Chinese Communist air force has in excess of a thousand planes which they have not committed to the land battle except in the contest in the neighborhood of the Yalu River.

A decision on the part of the Chinese Communists high command to commit this force in a struggle for air superiority over the Korean Peninsula would have very serious consequences indeed.

One more point about Korea. On my recent trip there I was especially impressed with the Joint Operations Center at Fifth Air Force headquarters, where representatives of the ground forces sit side by side with representatives of the Fifth Air Force, and naval and marine aviation and mutually agree upon how the available air effort shall be distributed in support of current operations. Thus at this one central point, the tactical employment of United Nations air power is closely coordinated with the fire and movement of United Nations ground forces in Korea. The operations of this center went without hitch. All of the planes of the United States and of our allies were in a pool, and as far as I could make out, there was no argument about who did what except that assignments were made in accordance with the need of the battle situation and without reference to who was to do it. Unification has been applied not only through the whole of United States air, but through the whole of United Nations air there available. There does seem to be some rule that the closer to the scene of action, the less difficulties there are in achieving a coordinated and harmonious effort. Reports testifying to the effectiveness of our Air Force on the United Nations' land-sea-air team in Korea, have come from all ranks of the United Nations' ground forces. Air Force reservists, of course, have contributed heavily to this fine record.

May I say now some words about the Air Force as it stands today? As you know, our present target is for 95 wings by the middle of 1952. We have 87 wings now.

It is customary to say that the 95 wings will not be modern by the middle of 1952, and this is true provided that one also accepts the proposition that an Air Force is never fully modern in the most literal sense. While the Air Force, is fully alive to the need of having an adequate force in being, it is also our purpose to see to it that there is a constant improvement in the quality of our planes. We will never be satisfied with any existing set-up. However, it must be said that there are some contemplated improvements in the quality of our machines which will come into effect fairly soon. The bomber fleet is still in the main piston-engined. The B-29's and B-50's are still the backbone of the medium bombers. The B-36 has moved partially into the jet field since the B-36D's and F's are now rapidly filling up the units. The B-36D and F are, of course, the B-36 with straight wings, six 4360 piston engines, and the four J-47 turbo-jets.

May I say a word about the B-36? Sometimes the modernity of this plane is challenged. If we are talking about the earlier models, which had only the six 4360 piston engines, then I think it is fair to say that the plane is obsolescent. On the other hand, the B-36, like every airplane, especially bombers, that has ever existed, is in a state of evolution. The latest model can fly very fast and very high and it is the best intercontinental bomber in the world. I realize that there have been some statements recently about a new Russian six-turbo-prop bomber, but we have no indication that this plane already exists.

Moreover, B-36 is evolving into a new model which will fly soon, to which the designation B-60 is given. It is still the basic B-36 design but it will have swept-back wings and will be powered by eight J-57 Pratt and Whitney jet engines. This will be a much improved airplane and will compete with the Boeing B-52 powered by eight Pratt and Whitney J-57 jet engines. The B-52 is expected to fly this year, and I can assure you that neither the swept-back B-36 nor the B-52 are obsolescent airplanes.

Moreover, as you know, the B-47 will move into units in the medium bomber fleet of B-29's and B-50's and gradually will supplant these two planes.

Likewise in interceptors, fighters, cargo carriers, transports and tankers. The North American F-86 is still our best day interceptor, but all weather interceptors such as the Northrop F-89, the Lockheed F-94 are rapidly coming in, all to the end that our air defense fleet will become almost entirely an all-weather operation. And we are planning for a new interceptor which will be superior to any of these. The C-124 is coming in the cargo-carrying and transport field to phase out entirely the C-54. The C-119 is rapidly taking over the bulk of the troop carrier field, and the new Chase C 123 is the latest thing in assault transports. The KC-97, the tanker version of the Boeing Stratocruiser, is supplanting the tanker versions of the B-29 and the B 50. And on the drawing boards, looking ahead to the immediate future and years ahead are improvements on all of these planes and draftings of new and advanced models. In some instances these drafts, both those for the near future and those for the long future take the form of uninhabited aircraft and other devices, the nature of which has not yet been made public.

May I say a word about production? The impression is sometimes put forward that the aircraft production program is subject to serious slippage and we are falling materially behind schedule. It is sometimes also said that we do not have the production potential which, if orders were placed now, would enable us to obtain the planes that we might want within the normal period of time.

Neither of these statements is true.

During fiscal year 1951, our aircraft production schedules underwent several changes. Some adjustments were due to the excessive step-ups in the programs. Other adjustments were made in order to give effect to changes in the actual design of the aircraft. The result has been a variation in the meeting of our scheduled deliveries; but none of these changes was other than temporary. In fact, deliveries during fiscal year 1951 did not fall materially behind schedule. Under the more realistic schedule that governed production during that period, there was actually a deficit of some 50 airplanes.

Nor should there be any appreciable slippage in the future for our production schedules unless we fail to realize some of the things which we think we can realize. For example, the machine-tool bottleneck must be broken. We expect that the controlled materials plan will reduce the lead time in the flow of materials. On the other hand, unforeseen contingencies could interfere with this, as they could interfere with any program. By "unforeseen contingencies" I mean prolonged plant shut-downs such as the ALCOA strike or a national catastrophe such as the Kansas flood.

During fiscal year 1952, we do anticipate a slippage of about 11 percent by February 1952, but we also expect that this deficiency will be fully recovered by June 30, 1952. Moreover, we expect that by December 31, 1952, aircraft deliveries should be about a third ahead of those called for by the production schedule.

Now a word about the mobilization potential.

It is very much to the credit of the then Secretary of the Air Force, Mr. Stuart Symington, and to the present Chief of Staff, General Vandenberg, that in the days prior to Korea, the Air Force budget did call for stand-by tooling for the purpose of creating a reserve mobilization potential for the day when the country might need airplanes in a hurry.

As a result of this foresight, the situation today is that with the existing plants, and with merely an increase in subcontracting and shifts, we could, if we want to, 20 months from now start on a great program of aircraft production, greatly in excess of that presently contemplated as our present peak. We could, without any new plants, more than double our monthly production of airplanes. This is a huge capacity and takes no account of what might be done in the event that other new plants were brought into operation.

A word about our personnel policy.

The cost in money terms of the air power which this country will have to maintain will be very great. It will be a great burden on the economy of the country. That the country can stand it is without question. On the other hand, any one who has anything to do with the development of this air power must and does look most attentively at each item of cost in an attempt to hold the burden on the people to the minimum.

On the other hand, there is another element of cost which is sometimes neglected in our thinking. That is the cost in numbers of people. People count more than money, and the Chief of Staff and I have been working very hard to see to it that the requirements of the Air Force for personnel are slashed below any figures which have heretofore been contemplated. In our plans for the Air Force of the future, we have already arrived at a basis for economy of use of men and women, for which the Chief of Staff and the Air Staff deserve high credit. We intend to pursue this very difficult policy rigorously.

I shall now say a word about the Air Force of the future.

First, about this perennial question of lead time. It is usually said that the lead time for the production of aircraft is 20 months on the average. It is, though, more helpful to say that the Air Force must make its immediate commitments and plans with respect to a period of 2 to 3 years after the commitments are made. The reason for this is that it takes this long to get the aircraft into units and the men trained once the program is submitted to the proper channels in the Government. Now, when we do look—at this moment—to the period 2 to 3 years from now, we see that there will be certain important changes in the conditions which the Air Force will have to meet.

It is obvious that in these 2 to 3 years the number of atomic weapons which will be available to our possible enemies and to ourselves will increase. We must, therefore, base our planning not on the figures which presently exist, or on those which will probably exist a year from now, but on those which we can count on from 2 to 3 years hence. A failure to make our calculations in this way would be a breach of trust. For we might then find ourselves in a position where we lacked sufficient air power to deliver the atomic weapons which are available, and this is something we must not allow to happen. The importance of these weapons and the stakes of a war in which they would be used are too high for us to allow any such condition to occur. No man's conscience could permit this to be done.

Moreover, these changes in the situation of the next 2 to 3 years must cause us to think imaginatively of the possibilities of

the future. We must not stay fixed to hide-bound ideas which will no longer be valid once atomic weapons are more plentiful. We must use the new resources we will develop not only to strengthen the strategic operations of the Air Force as we now conceive them but also to find new and novel uses for this vast new resource.

Air power should be made ready to bring atomic power to bear directly on the enemy's ground forces, retarding his advance and rendering him unable to concentrate his forces decisively. Here we are entering into new terrain and we shall use all the imagination we possess to see to it that effective use will be made of atomic weapons against profitable targets in the ground battle area. And it is not too much to hope that if we put the proper effort of industry into this operation and if we have sufficient imagination to detach our minds from past conditions of warfare, we may be able to assure our European allies of a much greater striking power on our part than we had hoped for, and even, indeed, make it unlikely that an enemy attack on the NATO forces on the continent of Europe would have a hope of success.

I do not propose to discuss these matters in any detail because it is not fitting to discuss them while they are in the formative stage. These are matters which must be resolved within the Department of Defense and the executive branch before they can be presented to the Congress and the people for their consideration. I do feel, however, justified in pointing them out in broad general terms.

What I have said I think is enough to dispose of any notion that the Defense Establishment of the future is to be based on balanced forces, at least on balanced forces as that term is sometimes misused. This term "balanced forces" is an example of a good phrase which has gone wrong. For it has come to mean in the minds of many the idea that the defense dollar should be divided equally between the three Departments which make up the Defense Establishment. This never was the intention of the men who first used the term. Anyone can accept the term "balanced forces" if they interpret it in its right meaning, which is that in these days with a military budget already at \$60,000,000,000, nothing less than a most exacting calculation of forces in relation to the top priority tasks these forces have to perform can be used for the basis for determining the kind of Military Establishment the country should have.

Perhaps in the past we could afford to have military units which were not strictly necessary on the day war starts or during the period immediately thereafter, or were not calculated to meet the top priority needs of ourselves and our allies. Now we have to calculate the things which are the musts—that is, the tasks which are indispensable to our great purpose of deterring war and of seeing to it that if war comes this country and its vital interests are protected. Then we must calculate how we can use most effectively not only our presently available resources to accomplish these results, but also the resources we will have in the future from 2 to 4 years from now. We must then allocate the planes, tanks, and ships, and the men who man them, to create an integrated force which will be able to accomplish these top priority tasks with the most devastating effect. Only then can we think in terms of secondary tasks, things which we might desire to be able to do, but which are not indispensable to our great and primary purposes. And I venture to believe that we will not be able to devote much if any effort to these secondary tasks.

I say this because it must be already plain to all of us that the claims upon our resources represented by the top priority tasks

alone will by themselves require a most frugal husbanding of our manpower, our raw material, and our industrial facilities. Already the demands are huge. They fall upon an economy that, in the war just passed, dug deeply into its mines, cut unstintingly into its forests, drained heavily in its oil pools, and made heavy demands on its manpower. From this point on we must give increasingly serious thought to the sobering fact that our resources are limited. Nothing could be more damaging to the future of this country than a blind piling up of armaments. A wise strategy, the only possible strategy for this country, is one based upon a wise and economical use of our total resources.

In these remarks I have touched on a few of the major current and future problems confronting the Air Force. The magnitude and complexity of these problems bears on us. In the aggregate, they are a stupendous challenge to our energies and imagination, and we shall try to meet this challenge as General Arnold and his colleagues did 11 years ago, when the total officer strength of the Air Corps—Regular, National Guard, and Reserve—including those not on active duty, was only 5,500 officers. When we think of the situation that confronted the Air Corps when the Nation began to mobilize in the summer of 1940 and, when we consider how we went on from such small beginnings to create the great Army Air Forces of 2,500,000 officers and airmen—we have an inspiring example of what we can do when we all pull together toward our common objective: The protection of freedom.

Price Control

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I wrote to my constituents under this date:

DEAR FRIEND: President Truman has called in his advisers and asked them to see what can be done about changing the weak price control law passed by Congress at the end of July.

We've already seen some of the effects of that law on our grocery store shelves. There's worse to come. I voted against the sections of that bill that are allowing price hikes. I don't think our economy can stand such high prices, and I know the people of my district can't.

I got pretty sick during the debating though, of listening to certain Congressmen blame farmers and workers for the current inflation.

An interesting report was issued recently by a Senate Agriculture Subcommittee headed by Senator GUY M. GILLETTE of Iowa. It spiked the fiction that farmers are to blame for high food prices. Evidence gathered during a long series of hearings last year showed that quite the contrary was true.

For instance, the report shows that in 1949 the prices farmers got for their produce dropped 13 percent, while retail prices went down only 4 percent. Later, when farm prices went up, the food processors quickly raised their prices to reflect not only the rise, but bigger margins for themselves.

The report states that bread sold for 13 cents a loaf in 1947. The wheat farmer got 3 cents of it. In 1949, with bread selling for 14½ cents a loaf, the wheat grower got only 2.4 cents as his share. I think that the same situation is generally true for today.

As for workers, I have heard dozens and dozens of speeches on the floor of the House by men who said workers were making too much money, and hence our country's economic troubles. I always find such speeches hard to listen to. Workers make a good deal less than Congressmen, and I know how inflation has cut into my own standard of living. I get letters from workers in West Virginia who are suffering real hardships with today's high prices.

I think that these stories blaming workers and farmers for high prices are advanced to the public by men who have a definite purpose in mind. They want to cover up their own actions. They know, too, that their position will be stronger if they are able to confuse the public and create wide divisions, especially between workers and farmers. Let's not let them do it.

Sincerely yours,

M. G. BURNSIDE,
Member of Congress

The Crusade for Freedom

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. DINGELL. Mr. Speaker, for his undaunted patriotism, initiative, and foresight, Drew Pearson, distinguished reporter and columnist, deserves the undying gratitude, commendation, and the wholehearted cooperation of all liberty-loving people everywhere. He is deserving of more than just the moral support of the Crusade for Freedom which he conceived and put into effect. He is in fact entitled to such financial aid as might be given in sums however small by the average citizen to help carry out this original and effective plan which penetrates the iron curtain and reaches the very hearts of the enslaved peoples. While this plan should be universally supported, it is especially commended to those who have personal friends and relatives yoked to slavery by vile hell-bred communism. An energetic and a sustained campaign should be inaugurated and carried on from public forum to pulpit in every part of the Nation. Let us unite to inform and to encourage the suffering people of the satellite nations who through no fault of their own have been consigned and confined to an existence worse than outright imprisonment. This fight on communism, like the unique idea of penetration by the use of balloons, is not the responsibility of Drew Pearson alone. It is the obligation of everyone who believes in God, in freedom and democracy. Remember that the millions of people fenced in behind the iron curtain constitute the biggest asset of the free Western World and they are the greatest liability and weak-

ness of Russia and of communism. To keep alive the spirit of these people we must maintain contact, stimulate their hopes and aspirations, and never charge off or even discount their value when the time and the test is at hand.

To claim an equity in the eventual victory you must underwrite the plan. You should invest now the dollar or more which can and must be spared to carry on the campaign for freedom and peace.

Contributions, Mr. Speaker, may be sent directly to Drew Pearson in Washington or to the Crusade for Freedom headquarters in New York City.

Fiftieth Jubilee of Glos Narodu (Voice of the People)

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. SIEMINSKI. Mr. Speaker, by unanimous consent of the House of Representatives, it is my personal and distinct pleasure to commemorate in the CONGRESSIONAL RECORD the fiftieth anniversary of the Glos Narodu—Voice of the People—a Polish-American weekly published in the great State of New Jersey by George Otłowski, young, dynamic, imaginative, and fiercely patriotic president of the American Publishing Co. situated in Perth Amboy, N. J.

I say it is my personal and distinct pleasure to salute the Glos Narodu, Mr. Speaker, because as a boy barely able to look over the top of the table in our library in Jersey City, I often heard mother and dad discuss, in Polish, news carried in the Glos published at that time by my uncle, Peter Prazmowski.

Recently, when the House recessed, I went to Florida to visit my parents who live in retirement on the Gulf of Mexico not far from Clearwater in charming Dunedin Isles. I had not seen mother since that morning last fall when I bade her good-by before leaving for service in Korea to join my World War II commander, Lt. Gen. Edward M. Almond, and his now famous Tenth Army Corps. As mother rose to greet me on my safe return from Korea and to congratulate me on being elected to this distinguished Congress of the United States, a newspaper fluttered to the ground. It was the Glos Narodu.

Mr. Speaker, you can multiply this experience of a family and its reading habits by the thousands throughout the United States; especially is it true among families whose parents were born in non-English-speaking lands, and whose task it is to raise their children to be good Americans. Dedicated to help in such a mission, foreign-language media have a distinct place in our community.

With pardonable pride, Mr. Speaker, I should like to list below tributes

tendered the Glos Narodu on the occasion of its golden jubilee:

OFFICE OF THE MAYOR,

Jersey City, N. J., July 16, 1951.

DEAR MR. OTLOWSKI: The people of Jersey City and Hudson County have been fortunate these past 50 years in having had access to a publication with the noble ideals of Glos Narodu.

A free and unfettered press is the heritage of America, and newspapers such as yours are essential in the never ending maintenance of that heritage.

Glos Narodu, with its undeniable appeal to the thousands of descendants of Poland whom we are fortunate to have within our community, has been of great assistance in helping to further good citizenship.

As the American citizens of Polish extraction have grown in community stature during the past 50 years, so has Glos Narodu.

Your newspaper is as much an outstanding credit to our community as are the people whom it represents.

On the occasion of its fiftieth anniversary, the City of Jersey City salutes Glos Narodu, and it is my personal, fervent hope that its contributions to our citizens will be continued in the years to come.

Sincerely yours,

JOHN V. KENNY,
Mayor of Jersey City.

THE WHITE HOUSE,

Washington, June 11, 1951.

MR. GEORGE OTLOWSKI,
President, The American Publishing Co., Inc., Perth Amboy, N. J.

DEAR MR. OTLOWSKI: I am happy to participate in observing the fiftieth anniversary of the Glos Narodu.

For half a century the Glos Narodu has performed a high public service for its many readers of Polish descent in New Jersey. It is to be congratulated particularly upon its patriotic endeavors in helping thousands of Polish immigrants become good Americans.

During both of the World Wars, it served faithfully in promoting Treasury bond drives, in the letters to Europe, and similar activities.

Today, when it is necessary for free people all over the world to stand together against the menace of aggressive communism, it is particularly important that the strength of all freedom-loving men, regardless of their nationalities or the languages they speak, be combined.

Standing thus together, there can be no doubt of our victory.

Very sincerely yours,

HARRY TRUMAN.

UNITED STATES SENATE,

June 6, 1951.

MR. JOHN J. WOLCZANSKI,
Secretary, the American Publishing Co., Inc.,
Perth Amboy, N. J.

DEAR MR. WOLCZANSKI: My greetings and good wishes on the occasion of the fiftieth anniversary of the Glos Narodu. The steady growth of this publication over the past half century is a fitting testimonial to the useful service Glos Narodu has rendered to the community and to Americans of Polish extraction.

A well-informed citizenry is one of the greatest guarantees of the survival of our democratic society and I am confident that the Glos Narodu is living up to its responsibility in giving its readers full access to the important developments of our time.

My congratulations on the golden jubilee of your newspaper.

Yours very sincerely,

HERBERT H. LEHMAN.

STATE OF NEW JERSEY,

OFFICE OF THE GOVERNOR,

Trenton, June 27, 1951.

It is with real pleasure that I extend to Glos Narodu, on behalf of the people of New Jersey as well as myself, warm congratulations and sincere good wishes on its fiftieth anniversary.

Your golden jubilee issue marks more than a half century of a successful publication venture. Yours has been the devoted duty of chronicling the progress of three generations of Americans of Polish heritage. To those newly arrived in the early days, Glos Narodu brought not only news of their compatriots, their problems and achievements, but even more important, an interpretation of American life, American hopes, and American ideals. As much as any other institution, your newspaper entered into the important work of raising up a generation of new citizens who had so much to give to our community at the same time that they made its values their own.

The record of five decades is one of progress and achievement in many fields—economic, social, cultural, philanthropic, and political. It is a record of new citizens, their children and their children's children, all enriching the life of our State by their individual and group contributions.

May I wish you many years of service as constructive and rewarding as those that have passed.

Cordially,

A. E. DRISCOLL,
Governor

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES,

Washington, D. C., June 27, 1951

DEAR MR. OTLOWSKI: On this the fiftieth anniversary of the Glos Narodu, I wish to compliment and congratulate you and your entire staff and organization for the great and laudatory work you are doing for the American people of Polish extraction. To report the factual news and the views of governments, statesmen, and people, is a service to the community and your readers that cannot be surpassed. To know and discuss is to understand and appreciate.

Glos Narodu represents that segment of the American free press that is devoted to the principles of democracy. My best wishes to you on this midcentury day of service to American people of Polish extraction.

Kindest personal regards.

Sincerely,

ALFRED D. SIEMINSKI

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES,

Washington, D. C., August 28, 1951.

MR. JOHN J. WOLCZANSKI,
Secretary, the American Publishing Co., Inc., Perth Amboy, N. J.

DEAR MR. WOLCZANSKI: Congratulations on your anniversary. Your half century of outstanding achievements in the field of newspaper publishing prompts me to send you, your staff, and readers most sincere congratulations. I believe Glos Narodu fills a gap which would otherwise deprive the subscribers of many informative and interesting articles and special features which, I feel, is most important to the Polish people. The fact that Glos Narodu is publishing this anniversary edition confirms its excellence, its service, its community appeal and interest. My heartiest wishes for the continued success of Glos Narodu.

Sincerely,

ANTONI N. SADLAK.

ST. ANTHONY'S ROMAN

CATHOLIC CHURCH,
Jersey City, N. J.

GLOS NARODU,
Jersey City, N. J.

DEAR EDITORIAL STAFF: As pastor of St. Anthony's parish, the oldest Polish parish in Jersey City, I wish to convey my sincere wishes to Glos Narodu, the oldest Polish weekly published in the East.

The Polish press deserves great credit for what it has done for the Polish people, especially during the last 50 years. Although hindered by different occurrences, Glos Narodu is carrying on; it brings the mother tongue into our homes, defends our character, and propagates our traditions. A majority of the Polish weeklies have gone from the horizon, but Glos Narodu is celebrating its 50th year. This golden jubilee is the unbeatable proof of the esteem in which it is held by the Polish people.

Therefore, for all your past and future achievements I am sending to the editors and the entire staff my best wishes for success and perseverance in your endeavors: May the Glos Narodu expand and serve the public for many years to come, to reach its one hundredth anniversary and more.

REV. LEON P. HAK,
Pastor, St. Anthony's Parish.

AUGUST 25, 1951.

MR. GEORGE OTLOWSKI,
President, Sons of Poland,
Glos Narodu, Perth Amboy, N. J.

DEAR MR. OTLOWSKI: On the occasion of the golden jubilee of your publication, Glos Narodu, which you will observe this month, I am pleased to congratulate your organization. I wish you continued success in making known the great struggle of the sons and daughters of Poland in the cause of true freedom, and for the preservation of the God-given rights of each individual.

With kind regards, I am

Very sincerely yours,

F. CARDINAL SPELLMAN,
Archbishop of New York.

HUDSON DISPATCH,

Union City, N. J., August 20, 1951.

DEAR MR. OTLOWSKI: I want to congratulate you on completing 50 years of publication. That is a long time in the life of any newspaper, even when you get out only one issue a week.

With best wishes.

Sincerely yours,

JOHN MITCHELL,
Editor.

[From the Hudson Dispatch, Union City, N. J., of July 28, 1951]

SIEMINSKI PRAISES POLISH NEWSPAPER—JERSEY WEEKLY PLANS HALF-CENTURY ISSUE

"The cultural heritage of a people is its reservoir of moral courage in troubled times," Congressman ALFRED D. SIEMINSKI last night told a group of radio and newspapermen assembled at Hotel Plaza, Jersey City, to discuss the publication of the jubilee half-century issue of the People's Voice (Glos Narodu), Jersey City's weekly Polish-language newspaper.

SIEMINSKI announced his intent to include a feature of the jubilee edition, a chronicle of 50 years' progress of Americans of Polish heritage in the metropolitan area, in the CONGRESSIONAL RECORD. He compared the work of a foreign-language paper with that of the Voice of America. The exchange of our culture, "our hopes and ideals . . . is our best weapon against Russian communism," he declared.

The Voice of America, whose fight for a full \$85,000,000 appropriation he spearheaded to victory in Congress this past week, is keeping alive a spark of hope in the future for millions of Europeans, he said, while the foreign-language newspaper presents the story of Americanism enriched with the living culture of the new American who has found freedom.

SIEMINSKI's thoughts on the American story of the Polish immigrant were drawn upon by the publishers of the People's Voice, John J. Wolczanski and George Otlowski, as well as those of others present from the communications field, for incorporation in the anniversary edition which is scheduled to be printed in the last week of August.

The edition, it was announced, will tell in words and pictures the growth of the immigrant, his problems, and his achievements in the past 50 years as well as the part the paper itself has played in the community life.

[From the Jersey Journal]

GOLDEN JUBILEE OF GLOS NARODU

The forthcoming golden jubilee issue of the Polish weekly newspaper Glos Narodu, which has served in turn the Polish immigrants to New Jersey of 50 years ago and the Polish-American business and professional men of today, will emphasize the fact that America is still the land of opportunity.

Established back in 1901, when most of the Polish-speaking people in New Jersey were recent immigrants working in factories, the Glos Narodu has grown with the fortunes of the people it served. Today it can number among its readers civic, professional, and business leaders of the community.

Today, with their homeland oppressed under a foreign yoke, the people of Polish descent in this country have more reason than ever to rejoice in the freedom and the opportunity that America has offered. They will join most fervently with George Otlowski, president of the company which published Glos Narodu, when he says:

"On this fiftieth anniversary we dedicate this issue with a prayer for freedom and liberty for all."

AUGUST 21, 1951.

JERSEY JOURNAL,

Jersey City, N. J.

(Attention: Editorial department)

GENTLEMEN: The Glos Narodu, the Polish weekly of Jersey City, is the official organ of our association.

We naturally were quite pleased with your editorial which briefly outlined the 50 years that were covered by the Polish weekly in that span of time. The board of directors have asked me, as the general secretary of the organization, to convey our sincere appreciation to the Jersey Journal for the splendid presentation of the Glos Narodu's forthcoming golden jubilee.

Very truly yours,

ALEXANDER SUDNIK, Jr.,
General Secretary, Sons of Poland.

[From the Jersey Journal, Jersey City, N. J.,
of July 28, 1951]

SIEMINSKI LAUDS POLISH NEWSPAPER

Congressman ALFRED SIEMINSKI, speaking at a dinner of members of the Glos Narodu, Polish newspaper published in Jersey City, which is celebrating its fiftieth year of operation, declared he would salute the paper by introducing an article in the CONGRESSIONAL RECORD, describing the progress of Americans of Polish descent for the past half-century.

The Glos Narodu, which in English means the voice of the people has offices at 167 Bay

Street. It was founded in Jersey City August 31, 1901.

SIEMINSKI told Polish radio workers and staff members of the Glos Narodu who attended the dinner at the Hotel Plaza last night that the "Polish newspaper has a definite place in the American community as long as the immigration program is open for non-English speaking countries.

"The Polish newspaper enables the people of Polish descent to keep in touch with the religious festivities of their country. Before the days of the iron curtain it served as a source of information to the Polish people concerning American activities. Even now it is occasionally smuggled into Poland in the wrappings of packages.

SIEMINSKI added the circulation of foreign language papers helps international relations. "Our Ambassadors should be Americans who understand the problems and background of the countries in which they are working," he declared.

WHOM,

ATLANTIC BROADCASTING CO., INC.,

New York, August 7, 1951.

The GLOS NARODU WEEKLY,

Peoples Voice,

Hudson County, N. J.

GENTLEMEN OF GLOS NARODU: In this important matter of the fiftieth year existence of the Polish language paper, let me have the privilege of sending my greetings and the hope for your further expansion and continuance of the promotion of Polish culture in America.

I hope, too, that the Polish language be furthered by the Glos Narodu and that your readers be increased and enriched with Polish tradition.

God bless you

With esteem, I am,

CASIMIR A. OTLOWSKI

Director, Polish Hour, Radio Station

WHOM.

LONG ISLAND BROADCASTING CORP.,

Woodside, N. Y., August 13, 1951

DEAR EDITOR: On the occasion of the fiftieth anniversary of your Polish paper Glos Narodu am sending you my best congratulations for additional expansion and best of success.

At the same time I would like to see the young generations of Polish descent to take an interest in the Polish press especially the Glos Narodu which is serving the Polish people the past 50 years.

Once again, best wishes to Glos Narodu for the next 50 years. May it live to 100 years in high esteem and a big success.

EDWARD V. GRONET,

Director of Polish Program, Polka Time.

ASSOCIATION OF THE

SONS OF POLAND, INC.,

Jersey City, N. J.

The GLOS NARODU,

Perth Amboy, N. J.

GENTLEMEN: The Glos Narodu is undoubtedly the most influential Polish language paper in New Jersey. This, of course, is greatly due to the fact that the Glos Narodu is the official organ of the Sons of Poland and serves its 20,000 members.

We of the Sons of Poland are happy to congratulate you on the half century of service to the American of Polish descent.

You have done a magnificent job. We certainly hope that you are able to carry out in the future your many public services as you have in the past.

With sincerest best wishes, I am,

Yours sincerely,

ALBERT M. KLEMP,
Grand Master of the Sons of Poland.

Poland: After 12 Years

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. RODINO. Mr. Speaker, when the unexpected Nazi-Soviet Nonaggression Pact was signed on August 23, 1939, it became clear that Poland's fate was sealed. The worst fears and suspicions of Poland's friends were realized on September 1 when Hitler's forces invaded Poland without a declaration of war. That was the beginning of World War II, one of the most tragic days in the history of western civilization. It also turned out to be the darkest day in the history of the unhappy Poles.

During the first 2 weeks of war, when the Poles were facing only the Nazis, they fought brilliantly and bravely against heavy odds, but on September 17, when the Red Army began to move against Poland from the east, again without a declaration of war, then it seemed that the end of Poland as an independent sovereign state was approaching and that in a few weeks the nation would be strangled by the evil forces of her two giant neighbors.

War blazed over Poland during the next several weeks, but by the end of October practically all organized resistance was eliminated, all Poland was occupied by Nazi-Soviet invaders, and all of Poland's 35,000,000 inhabitants were caught in a large concentration camp.

The designs of Hitler and Stalin against Poland were thus carried out by their henchmen according to plan. Millions of innocent Poles were uprooted from their native homes and driven eastward, deep into the Soviet Union to the "dark side of the moon," where many of them are still suffering and toiling in slave labor camps. Hitler's henchmen disposed of another several million Poles by means of inhuman gas-chamber murders. Still, in the midst of this holocaust brave and valiant souls continued to fight against Nazi-Communist tyrants. While the Government fled Poland and finally took refuge in London, many brave Poles fought the enemy in towns and in villages, day in and day out, in the open marshes and in hidden forests. They carried on their fight for independence and freedom from 1939 until mid-1945, for almost 5 years. From the information on hand, many of them are still carrying on that fight against their new oppressors.

At the end of World War II Poland lost more than 60,000 square miles of territory and about 10,000,000 inhabitants to her "liberator" the Soviet Union. This enormous loss was partially compensated by allotting some 30,000 square miles of eastern Germany to Poland. But these territorial changes were made against Poland's real wishes and therefore Po-

land actually lost more territory in World War II than Germany.

Since 1945 Poland's "liberators" have imposed a new tyranny upon her helpless people, a ruthless and heartless type of tyranny, even more cruel than the despised Nazi tyranny.

Poland's history is full of national tragedies. This is not the first time that Poland has been partitioned and dismembered among her foes. Her history of the last one-hundred-and-seventy-five-odd years is marked by such partitions. And in the end, through the valor of her fighting sons, she has managed to regain her independence and freedom.

We in the United States, in recalling that fateful September 1, know that the race which gave us, in our Revolutionary War, General Kosciuszko and General Pulaski, shall not overlong suffer under tyranny.

Address of A. H. Ward, of Aiken, S. C.

EXTENSION OF REMARKS OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. McMILLAN. Mr. Speaker, under unanimous consent, I include in the RECORD a copy of an address delivered by Mr. A. H. Ward, of Aiken, S. C., at the annual tobacco festival held at Mullins, S. C., on August 21, 1951. Mr. Ward is one of our leading citizens and has devoted his entire life to improving farming conditions in the South. He is one of the leading orators in the South and I am certain every Member of Congress will enjoy reading this address:

Mr. Chairman, Congressman John McMILLAN, Mayer Turbeville, other distinguished guests, ladies, and gentlemen, we have gathered today to pay tribute to a great crop, the golden weed of the Pee Dee, we are here to honor the successful producers of this crop, we are here to honor the business interest and others of this town who have made this festival possible, and we are here to do honor to the tobacco queens of this and surrounding towns.

Within the span of a little more than 50 years, we have seen the tobacco industry in this area develop from a small beginning to now when it brings to the producers of this area of South Carolina something like \$70,000,000 annually. It has been responsible for making this one of the highest income per acre areas in the United States. It has made of this a thriving town. The farmers and businessmen of this section are to be congratulated on their foresight, and progress and their ability to work together in building a great and prosperous area with tobacco as one of the principal sources of income. You are blest with a soil that is so well adapted to the growing of this great crop. You farmers have used science, efficiency, and knowledge to produce as fine tobacco as is grown any place on the globe.

It is somewhat strange that prior to 1927 no research or experimental work had been done on tobacco. Up to that time our average yields ran around 600 to 800 pounds

per acre. Then the Department of Agriculture and our State experiment stations began to work on developing new varieties and improved cultural practices. Now yields average 1,100 and 1,200 pounds per acre with some farmers harvesting 1,600 and 1,800 pounds per acre.

What a peace of mind and feeling of satisfaction there comes to one as he smokes a cigarette made from South Carolina-grown tobacco. It doesn't matter whether it is a business deal or whether he is making love to a beautiful tobacco queen, he watches the curling smoke and smells the sweet aroma of South Carolina tobacco, and success is bound to result. Long ago, young ladies were taught to say, "Lips that touch tobacco can never touch mine." My, how times have changed.

You people live in a section that is steeped in history. From pre-Revolutionary War days up to the present time, you have been a peace-loving people. But whenever the call to arms came, people from the Pee Dee were ever ready to shoulder their arms and march into battle until peace was assured. Then you were ready to return home and pursue your peaceful occupations. People who have lived here have wanted to be left alone. They disliked the raids of the Indians, so your forefathers drove them out. They disliked the interference of the British redcoats, so they rose in their might and drove them out. Many of you here, had a distaste for the views and actions of Germans, and Japs, and Italians. You went out to meet them in mortal combat and administered a stinging defeat. You abhor the tactics of the Reds today, and your sons will give a good account of themselves. Many of you have a distaste for too much Government interference, and something needs to be done about it. Your fathers knew how to govern themselves and they got along fairly well. It was people like yourselves, rural people and small-town people, who long ago gave us our freedom and our American way of life. Unless people like you have a greater voice in government today, our freedom will not survive. I would that we had more men in Congress like JOHN McMILLAN, who knows the farmers' problems, who has the farmers' welfare at heart and who put America first.

You the rural and small-town people constitute the last bulwark of democracy in America. You are needed as a balance wheel in our social, political, economic, and religious lives.

Nowadays, we see a trend toward centralized government. When our forefathers wrote the Bill of Rights, they thought they were avoiding just such a thing as we see happening about us. Yet, in spite of all that can be done, our Nation is trending toward socialism. There are millions of people in our country who cry out for socialized medicine, socialized insurance, socialized business, socialized agriculture, socialized this and socialized that. You do not find many socialistic minded people among farmers. They live close to the soil, close to nature and close to God. I do not believe you will find one single Communist on all of the 40,000 farms of South Carolina. There are millions who cry out for guaranteed employment and guaranteed income. This great Nation and its way of life came to us because our fathers were willing to work and toil. Your forefathers in this very area used their axes and grubbing hoes and bent their backs to clear this land of the trees.

A few days ago Admiral Fechteler said, "We Americans need to work until we sweat. If rivers of perspiration can save one drop of blood, it will be very worth while." Well, on a hot day like this we should save many drops of blood.

There is a modern idea abroad in the land that we can get something for nothing. A few days ago we were dismayed and chagrined that 90 young Americans were dismissed from one of our educational institutions for cribbing. They were simply following the modern American idea of getting something for nothing. They are not the only people guilty of cribbing. There are millions who are willing to beg the Government for a livelihood. There are many who will resort to crime, underground government, and gambling in order to keep from earning an honest living. We are witnessing the breakdown of the moral fiber of the Nation. Yes, these 90 young men broke an honor system, a code of ethics. There are too many people in America who are operating without an honor system. We see it in Government circles, we see it in politics, we have seen the gift of material things for political favors and vice versa. Almost every newspaper carries an account of some scandal by some Government official. The crying need of this Nation today is for undiluted honesty in government. There is no substitute for honesty. It is needed in business, in homes, in politics, in basketball, and baseball, and in all our relations with our fellow man.

Every load of tobacco which comes to this market represents honest work and toil on the part of somebody.

There are so many parents nowadays who do not want their children to work. They probably want them to be modern Democrats. This is a different kind of system from that practiced by our forefathers. You tobacco farmers have to work for what you get. I repeat that the last vestige of democracy left in this land is among farm people and small-town people.

Within recent months much ill-feeling toward farmers has been engendered by some of the metropolitan press, some commentators and some columnists. Housewives are told that farmers are responsible for the high cost of living. They are told that the farmer is a gouger and that he is selfish and that he is getting rich. The high cost of living is due to inflation, and the farmer isn't getting his share of the national income.

Factory wages are up 18 percent and farm income is down 15 percent since 1947. Yet we are told the farmer is getting rich. Within the past 60 days the price of cotton has dropped \$50 a bale. Figuring a similar drop in cottonseed that means \$50,000 less than was expected at planting time by South Carolina cotton farmers. Whenever the Government enters the field of production asking for a bumper crop, it has a responsibility to enter the price field in order that cotton producers making normal yields shall not suffer a loss.

Farmers are doing a splendid job. In the last 20 years they have increased per acre yields by 50 percent. Only 6 percent of the population of the world live in these United States. The farmers of America constitute only 1 percent of the population of the world, yet they produce 12 percent of all the food and 33 percent of all the meat in the world.

Sometimes we have surpluses of food and we complain about it. I'd rather live in a land with every storage house bursting out with surpluses than to live where millions of people are hungry and millions of children are starving to death. Yes, we've made progress. It now takes a farmer 1 hour to do a job, which took his forefather 1 week to do a hundred years ago.

Here today is a fine demonstration of cooperation between farmers and businessmen. Every segment of this Nation's activity is so interwoven with every other segment. Long ago McCormick built a reaper and binder, Deere produced the binder twine, Hill built

the railroads and Pillsbury built flour mills. That must happen today. This tobacco industry depends not alone upon you farmers, but upon the warehousemen, the dryers, the big tobacco companies, the highways, the railroads, the telephones, the telegraph, the bankers, and others. There must be a balance between agriculture and industry if there is to be lasting prosperity.

You businessmen of Mullins are interested in selling more tobacco here and in doing more business. That is your right. We love progress and prosperity. If you want this town known far and wide, build it yourselves and then build for quality and build for character. As you build, put character in every brick, every board, and every shingle. Build character into your business, in your organizations, in every load of tobacco, and in every relationship with your fellow man.

America must be strong. It must be strong agriculturally, industrially, militarily, educationally, and of more importance, it must be strong spiritually.

Apparently Federal Government Is Making It Difficult for Small Business To Exist

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. SCHWABE. Mr. Speaker, I am in receipt of a letter from one of our leading attorneys of my home city of Tulsa, Okla., in which he says that apparently the Federal Government is doing most everything it can to make it difficult for small business to exist.

My friend explains his statement by showing a comparison of two corporations. One is the corporation that has been in business for several years and the other is a new corporation which has only been in business a year or two. He gives facts and figures showing that the two corporations have the same number of employees, the same amount of equipment and investment, and the same net income. Yet the old corporation has a \$75,000 excess-profits-tax credit and the new corporation has a \$27,000 excess-profits-tax credit. My friend insists that there is no reason that relief is given older corporations and yet cannot be given new corporations. Therefore, I say apparently the Federal Government is making it difficult for small business to exist.

The letter from my friend, a Tulsa attorney, follows:

You will recall, I trust, the occasion that I had the opportunity to speak to you in the Capitol Building about a month back concerning the excess-profits-tax law as its burden hit young and new businesses—essentially small businesses. You asked me to write to you on this matter and personal business affairs have unfortunately delayed me.

While I am not a tax expert, the excess-profits tax uses as a base period the 4-year interval from January 1, 1946, to December 31, 1949. To determine your excess-profit credit, you use the three best years of this base period. A corporation that was in existence during this period of time is thus

able to take an average of its three best years and then 85 percent of that average is, substantially, its excess-profits-tax base. This means income in excess of that excess-profits credit will be subject to the excess-profits tax. For a young corporation that was not in existence throughout that period, say 1 year or less than that period, in the application of the same formula it would be forced to take less than a year's earnings, in effect divide that by three and take 85 percent of the sum remaining as an excess-profits-tax credit. As I indicated to you, a comparison of two competing firms here in Tulsa, of which I am informed, shows that with the same number of employees, same amount of equipment and investment, and the same net income, the old corporation has a \$75,000 excess-profits-tax credit and the new corporation has a \$27,000 excess-profits-tax credit. Frankly, such a thing is monstrous and many people, as well as I, feel that there is no reason that relief is given older corporations and yet cannot be given to new corporations.

I am quite conscious of the so-called provisions for new corporations but the alternate methods given are based on industry average rates of return which are determined in Washington and they do not constitute what we normally think of as relief.

Anything you can do to correct these injustices would certainly be in the best interest of the American citizen. I say this because if there is anything that is in the best interest of the American citizen and industries, whether large or small, it is having a quantity of healthy small businesses. Yet, to this writer, it appears that the Government is doing most everything it can to make it difficult for small business to exist.

Thanking you for your courtesy and attention in this matter, I am.

This Man Acheson

EXTENSION OF REMARKS OF

HON. PHIL J. WELCH

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Joseph (Mo.) News-Press of September 9, 1951:

THIS MAN ACHESON

One dramatic appearance sent William Jennings Bryan to fame. That was his "crown of thorns and cross of gold" speech at the 1896 Democratic National Convention.

The superb conduct of Secretary of State Dean Acheson presiding over the Japanese Peace Conference Friday night at San Francisco, could and may do for the much harassed and beleaguered statesman, what a year of plodding drudgery in foreign affairs never could bring about.

Television and radio audiences Friday night, many unfriendly to Mr. Truman's first minister of state, were in accord that the Secretary came off with high honors against the adept Gromyko. Mr. Acheson presided with fairness, with firmness, and with complete knowledge of parliamentary law. He was master of the situation from the first fall of the gavel until the late adjournment.

It is a strange thing but sometimes isolated happenings change history. It is not beyond the realm of possibility that this

prime minister, long target of the press, the Republicans, and even among many of the administration party, by his statesmanship as presiding officer of the 1951 world peace conference, may rehabilitate himself and confound his critics. Our own belief is that McCarthyism today is at cellar level in Washington senatorial circles.

The Late Roy N. Lotspeich

EXTENSION OF REMARKS OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. REECE of Tennessee. Mr. Speaker, last Saturday night, death came to Mr. Roy N. Lotspeich, president and publisher of the Knoxville Journal. He was a man of wide vision and great courage. With him his country always came first. He regarded the grave national issues confronting our country above and beyond party considerations. With it all, he was a kindly man who liked to help people. As a publisher he imparted his fine qualities of character to his newspaper with the result that it became a great newspaper with but one interest to serve—the public interest. After his death, the Journal carried an editorial written by Mr. Lotspeich's loyal friend, Guy L. Smith, one of the Nation's ablest editors, which I think is of sufficient public interest that I am inserting it in the RECORD where it may be widely available:

ROY N. LOTSPPEICH

Where to begin?

What incidents to choose from 69 years of active, vigorous living?

What words to use to express the devotion and loyalty of a great organization to the man who was its chief not simply by the accident of corporate position, but because of outstanding characteristics of mind and heart?

To speak for the people in his organization, then, the words must be personal. They must need be sorrowful and sentimental, because he whom they have lost in death was not just a name, or a casual acquaintance, but a man of flesh and blood with whom they joined hands to serve an institution.

So the Journal organization, one may begin by saying, mourns the loss of Roy N. Lotspeich, president and publisher of the Knoxville Journal until his death here on Saturday night. The community, as well, in that death lost one of its authentic personalities, the like of which it will not soon see again.

Trying in a moment's space to weigh, compress, and analyze the reason why he was a great human being, perhaps the thought that claims first attention was his friendliness. He liked people, big people, little people, successful people and those who for one reason or another had failed. This friendliness was apparent wherever he was, in his office, on the street, in a railway lounge, or at a party at home. He anticipated a friendly response and for that reason never was reluctant to take the initiative in striking up an acquaintance. Almost invariably the response was there, too.

Because he was a friendly man in, for the most part, a friendly world, he doted on doing things for people, with no thought of self-serving. His associates know that there

never lived a man who got greater or more sincere pleasure from doing nice things for people than did Mr. Lotspeich.

It goes without saying that he was both intelligent and unusually well informed. The success story which he lived is proof enough of that. It was in the free-enterprise tradition which has made this a great nation through the composite achievements over the years of such men as this one we have lost. As a young man and from a standing start he became one of the South's great industrialists before he became a newspaper publisher.

He was loyal, both to friends and to principles. What kind of weather his friends encountered did not make any difference, once his loyalty was engaged. He was willing to fight for his friends, and, under provocation he was just as loyal an opponent as he was a friend. The thing about it was, though, that to a man of such generous instincts forgiveness came easy. A fight concluded, he was always willing to make friends.

What courage he had. Like almost every other man who makes a great success, he knew some dark days in business, not many but still a few. He had a fighting heart if ever a man had. He never envisioned defeat in any undertaking, even though it might appear impossible. He sometimes expected the impossible of his men, and frequently got it.

Courage is the psychological cousin of optimism, and here was a man in whom optimism was invincible. His darkest hours were brightened by a steadfast conviction that they would pass, and pass they did invariably.

And he had a streak of sentiment in him a yard wide. East Tennessee, Greene County as the place of his birth and early years, Knoxville, as the scene of his life career—what but good could come out of any of them? That was the way he saw it and would hear of nothing else.

To serve that sentiment about his section, county, and town, he was a natural and proper prospect in any civic undertaking. From the early beginnings of the Great Smoky Mountains National Park, under the leadership of the late David Chapman, down to his most recent civic enterprise, Blount Memorial Park Association, Mr. Lotspeich was a ready and generous planner and giver. He felt he owed his success to his city and section and personally, and through his newspaper, he supported everything he believed to be to their advantage.

A devoted husband and father, he provided an example of affection and solicitude for his family which was as well known as any of his other notable characteristics.

It was said above that Mr. Lotspeich was as loyal to principles as he was to people and the statement is undeniable. His newspaper, this newspaper, was the instrumentality through which was expressed the burning patriotism that every intimate of his knew well. He possessed a remarkable grasp of the end effects of forces which have been put in action in this country mainly in our times. For example, he was denouncing communism at a time when it was fashionable in certain circles to coddle and encourage it, and no less outspoken has been his position on socialism, corruption, and other evils in government. There is no worse plight for any publication than to have a cowardly publisher, and this man's courage to let his paper tell the truth as it saw it and to fight for what it believed to be right, regardless of consequences, was a constant source of inspiration and a basis of loyalty to his people. Not only did Knoxville and east Tennessee lose a great citizen in his death, but the Nation lost a devoted patriot.

So the words have been said, mayhap awkwardly and haltingly, which again may not be unfitting when they, in whose behalf

they are spoken, are under the deepest and most painful consciousness of their loss. Words can suggest, they can indicate the facets of a complex human being, especially one blessed with such unusual powers and abilities as Mr. Lotspeich, but the full-rounded picture of such a man is formed in having known him or having had him as a friend. The picture of a man operating a great institution is one picture; that of the same man choking up and having his eyes brimming with tears when his printers sent flowers to his sickbed is another, yet the man is the same and only for those who really knew him can it be complete.

Fortunately, as Mr. Lotspeich so often said, Nature has a way of carrying on, no matter what happens. His dearest wish, that his newspaper be carried on in the great tradition which he had established, will be regarded by his organization as a sacred trust. The last days of its publisher were made content in the confidence that this would be so.

**With Public Recognition that Southern
Alabama Is a Mighty Fine Place in
Which To Live and Work, the Huge
Alabama Power Co. at Salco Will Prove
an Important Source of Power in De-
veloping Large Chemical Industries
Closely Related to McIntosh Salt and
Its Many Byproducts**

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BOYKIN. Mr. Speaker, along with the news of the Alabama Power Co. breaking ground for the new Barry steam generating plant at Salco, comes word of another \$60,000,000 industry to be built there—a rayon textile mill.

Mr. Speaker, more than a half century ago—and when first I learned about a thing called electricity, I queried my father, "Dad, can you really light a house without burning coal oil or kerosene?" "Yes, you can," he said, "with electricity." When I asked him what electricity was, I remember his saying, "Son, I don't think anybody in the world knows exactly what electricity is, and I don't know that it is absolutely necessary that we should know. Some day someone will find out, but whatever it is, I predict that it will do more to improve the lot of mankind than any discovery that has ever been made. Now, son, I told you we don't know just what electricity is, but it is not necessary that we know what things are if we know how to create them and use them for the benefit of man."

My father went on to say, "We know now, my boy, that we can take a mass of iron, cut it into certain shapes, wrap cotton-covered copper wire around the iron so as to form a ring; and we can take another bar of iron wrapped with the same kind of wire, and then by using an engine to turn the bar inside the ring, not alone can we produce elec-

tricity to light the house, but actually use the electricity to drive other machines. Thusly, by reversing the process we can use the power made by an electrical generator so that it will run vehicles"; and out of these applications of electric power came the first streetcar line in all the world.

Mr. Speaker, various men as well as groups have attempted to decide just what invention or the establishment of what principle has added most to the development of civilized man. Some have said the discovery and application of the principle of the wheel and axle. Some say it was the lever. Some there are who claim the printing press was the greatest, inasmuch as that enabled man to acquire knowledge with which to improve his understanding of and his usefulness to his fellows.

I myself hold to an entirely different theory. History has recorded man's doings on this earth for more than 6,000 years, but the existence of the centers of the life of earliest man have either entirely disappeared from the earth or else the inhabitants of those areas are among some of the world's most backward people. The history of European development—easily traceable back several thousand years—reveals, certainly, that some of the most backward areas of the world are to be found on that continent. The discovery of North America, however, was made less than 500 years ago, and the establishment of these United States of America was instituted less than 160 years ago.

I do not think, Mr. Speaker, that I make overstatement in saying that we in this country have built on this continent a more advanced civilization in 160 years than has been developed anywhere else on the planet in the 6,000 years of recorded history.

Much of all that America is today revolves around the fact that it was Benjamin Franklin, an American pioneer, Revolutionary leader, philosopher, writer, statesman, and scientist, who, when as a boy flying a kite, made discovery during a rainstorm that lightning was, in fact, electricity.

There are a dozen or more factors which have contributed to the tremendous developments that we have achieved here in our country. Not the least of these were our great natural resources, our great agriculture, minerals, timber, water, and transportation. They all have contributed much to our development.

The inventive genius of our people—Deere, McCormick, and others—in developing agricultural machinery which began with the plow; the empire builders who staked out the transcontinental railroads; the Schwabs and Carnegies, who brought forth the age of steel and steel products that have been wrought into our skyscrapers, our railroads, and our bridges; the Goulds, the Vanderbilts, the Harrimans, the Morgans, the Chryslers, and the Fords—these were all men whose dreams were fabricated into the realities which make for the high standard of living enjoyed by our peoples—and which the world has come to know as the American way of life.

I did not intend to encompass all of America's great development in this short talk. I wanted to talk to you all about our Southland—of our own great potentialities in the cotton South—and particularly did I want to talk to you about my State of Alabama.

Mr. Speaker, more particularly do I want to talk to you at some length about a great American and Alabama man—Tom Martin, chairman of the board of the Alabama Power Co.

Somewhere I one time read that possibly the greatest invention that had ever been made was that contrivance put together by Eli Whitney. It was an engine-driven gadget designed to remove cottonseed from the staple. Thus, our plantation Negroes learned to call it the cotton gin—a name which has stuck to it until this very day.

There is no doubt but what the cotton gin was an invention that has had much to do with our cotton economy inasmuch as, prior to its development, hundreds of thousands of Negroes spent millions upon millions of man-hours picking the seeds out of cotton by hand. Indeed, it was a Herculean task for a person to hand-pick the seeds from as much as one pound of American-produced cotton in a single day.

In times like these when we hear of fifteen to eighteen billion 500-pound bale crops of cotton, we can well appreciate the enormous value of the cotton gin. I well remember the story of a ship which landed in England with 50 bales of cotton aboard, the captain of which was thrown into jail, for no particular reason, or with any specific charge against him except that he had brought 50 or 60 bales of cotton into port in one cargo. It was reasoned that inasmuch as no mortal on earth could have that much cotton at any one time—he had to be "in league with the devil himself" to have acquired that many bales of cotton. The story tells of the trouble to which the captain was put in his efforts to explain where on earth he could have acquired that many bales of cotton.

As the days of reconstruction turned into years—and unfortunately for our Southern economy—our progress was still hitched to a one-galled planter—and a one-mule farm. Hence, it is not surprising to have it authoritatively stated that our natural resources of timber and water have done more to improve the economy of the cotton South than have all other factors combined.

The great abundance of timber in our southland has enabled us to ship billions upon billions of board feet to northern and world-wide markets, and with the funds obtained therefrom, to build a more solid economy and standard of living than ever before known. Forest products in general, our sawed timber, our plywood, furniture, barrel staves, boxes, ax and pick handles alone, have brought billions of income to the Southern States.

The influence of all of these, however, have been dwarfed into insignificance by the magic of the white power generated by water flowing over dams built in our rivers and coal taken from the bowels of

the earth in our own beloved State of Alabama.

Mr. Speaker, principal among all business concerns to which the unborn generations of southerners will forever be indebted is the Alabama Power Co., its affiliates, its associates, and to those intrepid men whose vision of the economic worth of electrical energy caused them to stake their all to elevate the cotton South from being the prime economic problem of these United States to one of the most fruitful and productive areas on the face of this earth.

Far and above all others to whom this credit is due is my good and long-time friend, Thomas Wesley Martin, born at Scottsboro, Ala., in August of 1881. Mr. Speaker, I would have you know that in the short span of his lifetime Tom Martin has done more to make the South the great country that it is today than any other man that has ever lived.

Mr. Speaker, no more significant honor could be paid any man than the distinction recently given to Tom Martin by the Alabama State Legislature as reported in the news as well as the editorial column of the Birmingham News of August 2.

What follows is an editorial clipped from the Birmingham News as of that date:

WELL-DESERVED SALUTE—LEGISLATIVE RESOLUTION HONORS ONE OF OUR FINEST THOMAS W. MARTIN

(By Fred Taylor)

MONTGOMERY, ALA., August 2—Gov. Gordon Persons today signed a house joint resolution honoring one of Alabama's outstanding—many consider him the outstanding—citizens.

He is Thomas W. Martin, Birmingham lawyer, businessman, and chairman of the board of the Alabama Power Co.

But no more need be said. The resolution, introduced by Jefferson Representative J. G. (Jimmy) Adams, Jr., and Dallas Representative Walter C. Givhan, speaks for itself. It was passed unanimously by both the house and senate and it reads.

"House Joint Resolution No. 78

"Whereas Thomas W. Martin, a native son of Alabama, has for many years given of his time and talents for the benefit of the people of Alabama and the South; and

"Whereas Thomas W. Martin has been instrumental in getting many important industries to establish plants in the State of Alabama which are of great benefit to the State and the people of the State, and

"Whereas Thomas W. Martin has been greatly instrumental in organizing and establishing the Southern Research Institute at Birmingham, which institute has been of great service to the manufacturing industry in Alabama and the southeast; and

"Whereas the Legislature of Alabama desires to express its appreciation, and the appreciation of the people of Alabama, for the distinguished achievements of Thomas W. Martin. Now, therefore, be it

"Resolved, that the house of representatives (the senate concurring), Takes this opportunity to express its thanks and appreciation to Mr. Martin for his constant, untiring, and unselfish work in the fields of industry, education, research and history, for the benefit of the people of Alabama and the South; be it further

"Resolved, That it is the hope and wish of this body, and of the people of Alabama, that Thomas W. Martin may be spared for many years to come to continue and will be

able to continue the great and beneficial works in which he is engaged.

"A copy of this resolution, when passed by the legislature, is to be sent by the secretary of state to Thomas W. Martin."

Tom Martin, one of the first and foremost of all living southerners, is the son of William and Margaret Martin, the grandson of Thomas and Elizabeth Jane Martin, the great-grandson of Jesse Martin, and the great-great-grandson of Frank Martin, a soldier in the Revolution, who moved from Halifax County, Va., to Alabama in 1808.

Tom Martin's father, a lawyer, was attorney general of Alabama from 1889 to 1894, and was serving as speaker of the Alabama House of Representatives at the very time of his death in 1907.

Receiving his preparatory education at Starke's University School in Montgomery, Tom Martin studied law at the University of Alabama in 1899-1900, and following his admission to the bar in 1901, practiced with his father in Montgomery. He served as assistant attorney general of the State from 1903 to 1911, during which time he was also junior partner in the Montgomery law firm of Martin & Martin until the death of his father in 1907. The firm then became Tyson, Wilson, & Martin, and, in 1912, Tom Martin moved to Birmingham to become general counsel of the Alabama Power Co. In 1915 he took on the added duties of vice president, and, on February 16, 1920, was elected president but still retaining the post of general counsel. In October 1949 he was elected chairman of the board.

Mr. Speaker, the original power program of the company was financed in England and with English capital through the Alabama Traction, Light & Power Co., Ltd., which company acquired the common stock of the Alabama Power Co. That plan of financing was superseded by an American plan—due to the situation brought about by the First World War. Inasmuch as control of the company still rested in England, the directors authorized Tom Martin to go to England to negotiate this program for an American company to succeed the Canadian company. This he did in 1924, and, upon his return, the Southeastern Power & Light Co. was organized under the laws of Maine with Mr. Martin as president.

The latter company then acquired all of the holdings of the Canadian company, including control of the Alabama Power Co., the Mississippi Power Co., the Gulf Power Co., the Georgia Power Co., and the South Carolina Power Co. In 1930, the Southeastern Power & Light Co. was merged into the Commonwealth & Southern Corp., with Mr. Martin as the first president of the Commonwealth & Southern Corp. After serving 2 years, he resigned, but continued as a director and as president of the Alabama Power Co. This company serves directly or at wholesale the greater part of the domestic and commercial electric power business in 840 communities in Alabama. One of its largest hydroelectric developments was named in honor of Tom Martin in 1926, whose name was fast becoming known throughout the country.

Largely responsible for the organization in 1941 of the Alabama Research Institute—the name of which was changed later to Southern Research Institute—this institute is a nonprofit organization supported by business and commerce and provides much needed technological facilities for southern industry. An original founder, Mr. Martin is still chairman of the board of trustees of the institute, which operates in Birmingham with a laboratory, a director, and staff of scientists.

Tom Martin has served in innumerable other community and public efforts, and was largely responsible for the organization in 1937 of the Alabama State Chamber of Commerce, of which he is still a director and member of the executive committee. Chairman, in Alabama, of the Finnish Appeal in 1940, the Order of the White Rose of Finland was conferred on him by the President of the Republic in 1941. Honorary LL. D. degrees were conferred on him by Cumberland University in 1931 and by the University of Alabama in 1943.

In 1937, he acquired a panoramic hand-painted wallpaper made in France circa 1800, depicting, in five panels, French activities in Alabama under the title "The French at Algileville," or "Foundation of the State of Marengo." This settlement is best known in Alabama as Vine and Olive Colony.

This he presented to the Alabama Department of Archives and History in behalf of Mrs. Martin and himself. In recognition of his contribution to arts and to science, he was, in 1940, made an Officer d'Academie by the French Government, and was decorated with the Palmes Academiques, France's highest recognition to men of letters, arts and sciences, in recognition of his writings on early French activities in Alabama and the French settlement at Demopolis, Ala., called The Vine and Olive Colony.

Mr. Speaker, I remember your own great personal elation when Tom Martin was chosen the South's man of the year in 1946, and selected in 1947, in a Nation-wide vote conducted by *Forbes* magazine, one of America's 50 foremost business leaders.

He was principally responsible for presenting, in 1948, the achievements of his long-time friend, Dr. William Crawford Gorgas, of Alabama, in behalf of the Gorgas Hall of Fame Committee, for election to the New York University Hall of Fame for Great Americans, and, in the election in 1950 Dr. Gorgas was elected by the highest vote.

At formal ceremony at New York University, on May 24, 1951, Mr. Martin presented the bust of Dr. Gorgas to the Hall of Fame in behalf of the friends of Dr. Gorgas. On that bust it is worthy of permanent record to note these immortal words of Dr. Gorgas himself, in commenting upon his successful efforts at Panama and Habana in mosquito control:

If there were no other way to control yellow fever and malaria, the hot countries would be left to the inertia of the ages.

Thus you see, Mr. Speaker, the great significance of the work of that great Alabamian Dr. Gorgas, to southern

United States as well as to the hot countries.

Mr. Martin was chairman, from 1944 to 1948, of the Talladega County War Plants Conversion Committee, which was formed to make plans for the conversion of war plants in Talladega County to peacetime uses. These efforts finally resulted in the leasing of practically all of the war-plant facilities of the United States capable of peacetime production.

A director and chairman of the board of directors of the Alabama Power Co., director of the Southern Co., Coosa River Newsprint Co., and the First National Bank of Birmingham, Mr. Martin is a member of, among others, the American, Alabama, and Birmingham bar associations.

Mr. Speaker, I am always glad to avail myself of an opportunity to commend a friend or some great organization. On this occasion, I take opportunity to commend Tom Martin and the Alabama Power Co. which he heads, for the tremendous benefits they have brought to our State through the production of electrical energy and through the great genius of this man inasmuch as there has come to our Southland a happier way of life for every man, woman, and child residing in this area.

Mr. Speaker, the power that Tom Martin and the Alabama Power Co. created was not just a new form of energy. It was a something that gave to us in Alabama a new mode of existence.

In building the Alabama Power Co. to its great strength and position in American life, Tom Martin did more than exploit an invention that made for progress. He opened a way to a new mode of life in our every Southern State.

What I have said heretofore is apropos of the recent ground breaking near Salco, Ala., the starting of one of the greatest powerhouses ever built in southern Alabama, a plant to be known as the Barry steam plant of the Alabama Power Co.

Jim Barry, known, beloved, and respected, has been associated with the Alabama Power Co. since 1918. His appointment as local manager and division superintendent at Anniston in the eastern division was at a time when that division served 4,600 customers out of a total of only 9,600 served by the Alabama Power Co.

Distinguished as a marvelous engineer, he took an active part in the construction of Mitchell Dam, was named southern division manager in 1923 and elected vice president in charge of operations in 1927. He served as vice president and general manager from 1932 until 1949, when he succeeded President Thomas W. Martin, who that year was elected chairman of the board.

Mr. Speaker, it is altogether fitting that the Alabama Power Co.'s new steam plant at Salco should be named in honor of Jim Barry. Jim Barry is universally known as a hard-working, capable engineer, a distinguished southern gentleman and a great executive, respected not alone for his abilities but also for his many fine personal qualities which have endeared him to all who know him.

The concept of the generating plant at Salco is not new. Foreseeing the future of the Mobile area as far back as 1931, studies were instituted by the Alabama Power Co. to disclose the comparative costs of power for large power consumers in various places in the country.

These studies, which I well remember, disclosed that the cost of products requiring big blocks of electric power was cheaper in Mobile for many types of industry than at any other point. It was because of these facts that studies were begun for building a large steam-driven generating plant.

The plant, as it was laid out in 1931, was to contain five 100,000 kilowatt steam driven generators, and was to be located on a large tract owned by the company, with the view of making possible a big industrial center just north of Mobile. The principal reason why construction of the plant did not go ahead in the thirties was due to the long depression followed by World War II.

However, the ever-increasing demands for power over the Alabama Power Co. system during the past year, resulting in considerable part from a revision of national defense plans, together with other unexpected demands, including the demand for power to develop the McIntosh salt dome—caused immediate consideration of plans to provide additional power capacity in the Mobile area.

The new plant will have an immediate capacity of 250,000 kilowatts of power for national defense and essential civilian use. The building of a power plant near Salco therefore had its inception some 20 years ago in the future planning of power for the system, particularly in the vision of the then chief engineer, Oscar Gowen Thurlow. So convinced of the future of the Mobile area was the Alabama Power Co. that they then purchased the lands which now are the site of the proposed new Barry steam plant.

The new Barry steam plant is being designed so that ultimately it could have a capacity of 1,000,000 kilowatts. The initial capacity, as I have said, will be 250,000 kilowatts in two 125,000 kilowatt generating units. The first unit is expected to be in operation late in 1953, and the second in 1954. These generating units will be the largest yet installed on Alabama Power Co.'s system, and will have a capacity more than twice that of the company's Chickasaw steam plant, and almost as great as that of Gorgas No. 2 steam plant.

To prepare the site for the new plant, thousands of cubic yards of soil will have to be removed. The plant building will be supported by approximately 4,000 piles driven to depths varying between 55 and 65 feet. The over-all height of the building will be the equivalent of a 12-story building. The boilers alone will be as high as an 11-story building.

When the plant is in full operation it will use 100 tons of coal per hour. At normal operation the first two units of the Barry steam plant are expected to consume 800,000 tons of coal per year—or enough to heat 150,000 southern

homes of average size during an average winter.

An interesting feature of this plant will be the method by which the steam entering the turbine will be reheated after passing through the high-pressure end and before entering the low-pressure end of the turbine. This feature makes possible increased economy.

After the steam passes through the turbines, it is condensed for return to the boiler. In each of the two condensers to serve the two 125,000-kilowatt generating units there will be approximately 62½ miles of 1-inch tubing through which will pass the cooling water to convert the steam leaving the turbine into water. When the turbines are running at full load each condenser will require approximately 90,000 gallons of water per minute for cooling. This water, which will be pumped from the Mobile River, will discharge back into the river downstream from the plant. It is not to be consumed. The availability of this great amount of water from Mobile River made the plant possible at this location.

In addition to the Barry steam plant, the Alabama Power Co. has other important facilities under construction and on completion of its present program in 1954 it will have generating capacity of 1,384,500 kilowatts compared with 570,600 kilowatts in 1940.

Now that most of the large-scale rural construction program is completed, electric service will be available to practically all of the farms within the service area of the Alabama Power Co. Construction activities and expenditures currently are the greatest in the history of the company.

These expenditures—

Tom Martin declares—

are assurance of the intention of the Alabama Power Co. to serve well the 480,000 customers who get their power supply directly from us, and the 100,000 who receive it indirectly through other distributors.

Mr. Speaker, we in Alabama have great natural beauties, many physical assets, and a vast fund of resources of all kinds which have been untouched for centuries. Among the greatest of all assets within the State of Alabama are its many business concerns and great industries.

Mr. Speaker, I count among the greatest of these, if not the greatest, is the Alabama Power Co. I have no hesitation in saying, whether it be in the cloakrooms, whether in a congressional committee, or on the floor of Congress or elsewhere, that in my opinion, the Alabama Power Co. has done more to foster the industrial and economic development of our State than any other being or agency.

The reason it has been such a great leader in these fields is because of the vision and dynamic qualities of a man who has been at its helm for these many many years. I refer to that fine gentleman and my good friend, Tom Martin.

The Alabama Power Co. also is a leader because of the talent and vision of the men who are and have been associated with Tom Martin in the enterprise—

Eugene A. Yates, formerly a vice president and general manager and now chairman of the board of the Southern Co.; O. G. Thurlow, whose engineering genius is evident in many structures of the Alabama Power Co. Certainly, contributing to the company's farsighted leadership is James M. Barry, the company's president, after whom this latest plant is named. His capacity as an engineering executive is only one among dozens of fine qualities which are his, a deep devotion to the men and women who are the employees of the Alabama Power Co., a generous heart, a high regard for integrity, fidelity to duty.

Mr. Speaker, in my years in and out of public office I have had the privilege of meeting few men and few organizations so completely willing to do everything honorable which might be necessary to lead to the development of our great State. Certainly, since that great power company became established in the Mobile area in 1926 much has been accomplished here, and while the credit for this accomplishment should go to many, mark me as one who knows, the names of Alabama Power Co.'s Tom Martin, Jim Barry, and others, should be names high on the list.

I could spend hours upon hours talking to you of the history of this section, of the glories and the dramas, the joys and sorrows, which that history reveals. I could spend days talking and dreaming of the potentials of the future because who knows what raw material treasures still lie beneath our soils.

Not far from the Barry plant at Salco and close to McIntosh a great chemical plant is being built to utilize a basic resource—salt—from which many diverse chemicals can be produced in quantity for perhaps centuries to come, so large is the body of salt in the area.

Alabama's oil fields are not too far from here—and while not yet a great producing area, who knows but that at some early date all about us in this section will be the towering derricks that characterize the major oil field of our country.

Mr. Speaker, whether or not the earth beneath the soils of south Alabama hold further treasures, that are does offer unbounted treasure in the qualities of its people. They are dependable, honest, industrious, and they hope to apply their talents and intelligence in industries which may—yea—will locate here.

I am at this moment not privileged to disclose in detail the interests which have been shown in this area. There are, however, many diverse industries which are now considering locating among us. Some are related to the defense effort and some are not.

Since the beginning of the Korean war, I have made innumerable trips to New York, Detroit, Cleveland, Chicago, Montreal, and other industrial centers. These were made in an effort to present every possible inducement and benefits that would accrue to new industries suitable for location in the First Congressional District of Alabama.

Mr. Speaker, I certainly am gratified with a determination of my friend, Tom Martin, and his associates to build this new great power plant at Salco. Above

all else, it proves that they share with me my unbounded faith in the future of this great section of Alabama.

Mr. Speaker, to me the Alabama Power Co., in every phase of its existence and operation, is the epitome of democracy, rugged individualism, and private capitalism.

Not one single penny of governmental subsidy of any kind has ever gone to enrich the treasury of the Alabama Power Co., whose assets as of today are more than \$250,000,000.

The company employs over 4,000 men and women, and, as a result of its 1950 record, earned not alone the National Safety Council's first place award for the best accident rating among 33 participating electric utility companies of the same class—but it also received three Edison Electric Institute safety awards for having achieved a record of working a million continuous man-hours without a disabling injury accident. Additionally thereto, the company itself issued certificates of merit to 130 district, town, and division crews for completing a calendar year without a disabling injury.

Mr. Speaker, it has been authoritatively estimated that there are now 400 uses for electricity on the farm. Electrical power now grinds food—sends milk flowing through pipes into sterile containers and cures meat in the refrigerators and the lockers. A motor hums and distributes water, a farm wife snaps a switch to start a churn or a washing machine, and, with the arrival of eventide, comes the smooth hum of an electric sewing machine—while young eyes watch a movie in a country school, or perhaps even a television in the home.

There are now electric chick brooders, both fireproof and time-saving, electric curing sheds for the tobacco and sweet potatoes, electric milking machines and separators, electrically powered sprinkler and ditch irrigation, cutters, grinders, saws. These are but a few of the literally hundreds of machines and gadgets for which farmers and farm wives have found use for the low cost electricity generated by the Alabama Power Co. and which save them not alone time but back-breaking labor.

Mr. Speaker, as the Alabama Power Co. has prospered and grown—so has the State of Alabama prospered and developed. Their interests are mutual. To paraphrase a great poet, "As the bow unto the cord is, so are they one to the other—useless both if not in union."

Is the Long-Range Bomber the Only Answer?

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. DAGUE. Mr. Speaker, I find myself increasingly irked by what is apparently a disinclination to question the esti-

mates of our military planners, as well as the alacrity with which certain Members of both bodies rush to the defense of the military high command when their demands are questioned.

There is no one who will question the integrity of those who direct our military policies but the record is replete with so much evidence of bad judgment that Members of Congress would certainly be derelict in their duty were they to fail to question the justification for military expenditures that will run in excess of fifty billion annually for the next several years.

A case in point which seems to justify congressional skepticism is the controversy still raging over the effectiveness of long-range bombing and specifically the use of the B-36 bomber as our primary weapon, a program which will unquestionably take the lion's share of our appropriations for defense.

In my search for expert opinion on this important subject I have had what appears to me to be the sound advice and counsel of one of my constituents, Mr. Louis R. Humpton III, of Parkersburg, Pa., who has drawn on his experience as a naval aviator in World War II. Mr. Humpton has pleaded to some bias because of his naval service but inasmuch as I, as a former marine, am also biased in favor of Navy and Marine Corps aviation, I feel justified in submitting the following which sets forth his impressive conclusions. I invite all those who may have some doubts as to the program as the Air Force to give it their consideration.

AUGUST 13, 1951.

HON. PAUL B. DAGUE,
House of Representatives,
Washington, D. C.

DEAR MR. DAGUE: It was with a great deal of surprise and pleasure that I received your considered answer to my recent correspondence concerning questionable strategic concepts of the Air Force. Feeling that I know you, I believe you would hear me out, but since my feelings are admittedly strong in this issue I had assumed you would be somewhat dubious about the merit of my statements.

You will find enclosed the documents return of which you had requested. In addition, I respectfully submit additional material pertinent to the subject at hand. Unlike the Air Force which has volumes of documents to "prove" the Air Force view—all such proof having been sifted, compiled, published, and distributed by the Air Force—unlike these Air Force officers, I have only an occasional and intermittent influx of informative material from a few varied media—no one of which is trying to sell anybody anything. Then too, I'm unable to draw upon a file of refined data exclusively favorable to my contentions. I can only hope that you'll keep in mind the realization that I do not stand to make one solitary red cent one way or another and that I'm not attempting to persuade you to further strain the national economy in order to finance a paper theory whose pros and cons are far from overwhelmingly favorable.

I repeat: I'm well aware that emotion can cloud judgment. Still I feel that some of the objections which I shall state are valid and reasonable in a cold light of impartiality. My days as an active officer in the United States Navy are over. I speak as an individual only. In a few weeks I shall be at the University of Pennsylvania School of Veterinary Medicine and far more immersed in the viscera of a horse than in the

big bomber hypnosis. My motives in writing are quite simple—perhaps to the point of sounding a bit vapid: First, I wish my country to be sound and strong; not in arms alone, but financially as well. To that end I would see it defended efficiently by methods which will provide not only flexible defense, but which can do so in a manner that promises economic soundness and financial responsibility. Unless I'm very much mistaken, Marxist philosophy and strategy calls for the fall of America by its own lack of vision in economic matters. Like him or not, old Karl was no fool—and neither are his disciples.

I recognize that strategic bombing is a factor in modern war. Yet, it should not, it must not be distorted into the factor by overzealous Air Force advocates. It is becoming—at long last—more and more obvious that the taxpayer cannot buy every general and every admiral every item each deems "absolutely essential." There is evidence of logrolling even within the Joint Chiefs of Staff. Is it therefore boldness to inquire into the usefulness and performance value of any given weapon? Is it not reasonable to question the worth of a multimillion-dollar item when there is a valid contention that one costing less can serve the same purpose as well or better? Evidently Admiral Denfeld was considered "bold." He was certainly not blindly emotional and he did have some valid points. If one wonders why there's still some seething under "unification," that might be a place to start looking.

For your consideration I set forth here several points which seem logical objections to the excessive emphasis on long-range, high-altitude bombing: At present the Air Force plans a heavy bomber which will fly higher and farther than anything of its category now in operation. Initial models will cost \$21,000,000 each. One bomb sight for one of these planes will cost one-quarter of a million dollars. Is it worth it? For the following reasons I think not: First and foremost is the simple fact that it's too much for too little in the way of results. Most of the cost is to provide a bigger plane to fly higher and longer—the ultimate objective of precision bombing, to hit with accuracy, is indeed pushed further from realization. I've had very limited experience in patrol bombers, but enough to realize that no sky-high bomb sight—regardless of cost—can provide the accuracy and pin-point target differentiation that comes with low and medium altitude attack runs. If, for example, you wish to destroy a bridge you can go about it in several ways. From the air you could send over many bombers very high with many bombs and expensive bomb sights. All would rain their bombs in the area of the bridge. If you sent enough planes with enough bombs you will hit the bridge by sheer probability. Your bombers then must get home. They're out of range of fighter support and cost \$21,000,000 each. You'll almost certainly lose some of them. On the other hand you might launch smaller aircraft from a point nearer the target. With fewer bombs to carry, operating over a smaller range and releasing from a lower level the percentage of hits is tremendously greater. If their base is a carrier they'll have fighter support during a majority of their flight to and from—if not over the target itself. For less investment and at less risk you've gotten better results. Now I'm aware that there are targets within the Eurasian land mass which are out of range of carrier bombers—but they're very limited in number and certainly do not require whole fleets of intercontinental bombers to be crushed. Most of the industrial resources and productive potential of the Soviet Union do lie within range of carrier strikes.

The counter to such a statement might be, "Only the intercontinental bomber can be depended upon to answer aggression with a strategic blow." Why this word "only"? That's reminiscent of the "as is well

known—"logic of Russia's Malik. The near-fanatic belief in such retaliatory bombing serving as a deterrent to aggression has some very large holes—not the least of which is the possibility (unmentioned by the Air Force) that the limited and highly specialized ground facilities of strategic behemoths will be devastated with or before a blow against New York, Detroit, Chicago, etc. One doesn't launch these multimillion-dollar babies from the nearest available farm lane or highway. Indeed, they'd sink through a standard runway in much the same manner as an elephant lumbering through a mud-flat. Even the much-vaunted B-36 cannot be handled from the overwhelming majority of military air fields. Special facilities, all quite expensive, are required—and one doesn't patch up the holes in jigtime with a few bags of Portland cement. On page 7 of the Air Force magazine is the statement that General Vandenberg's goal is to get 20-30 percent of attacking aircraft. I'm a poor math student, but that would seem to mean that even should he reach his goal there remain 70-80 percent which get through to drop their loads. If you've never flown over a large Air Force base, I can assure you it presents a beautiful sight—and a lovely, unmissable, unmovable target. While on the line of bases, it is evident that a carrier cannot be permanently located on the Kremlin wall maps. Every American big bomber base in the United States and overseas can be—and doubtless is.

The Air Force maintains that Korea is an unusual and a typical war. Whenever their performance therein is criticized in any manner they hasten to state that one must not judge them thereby. Quite readily they point out that enemy supply and build-up flows from areas which are politically inviolate to their air giants. You and I know that the privileged sanctuary routine is an anomaly and paradox to say the least. Damn foolish would be more descriptive and exact. If a man is loading his gun with the expressed intention of blowing your head off, it seems logical to try and stop him before he begins to take aim. Nevertheless, that's not the way it is in Korea. Furthermore, considered opinion would suggest that the Korean pattern represents a revelation of Communist strategy involving localized and isolated harassments both active and impending. Such conflicts are apparently far more profitable to Moscow than any all-out hot war of major powers. Why then risk economic rupture by building fleets of air giants which, by the Air Force's own concession, are useless in such engagements? Why call skilled and experienced strategists with years of military and naval background by such names as "petulant," "jealous," "short-sighted," and "old fashioned" merely because they suggest that carrier aircraft can serve efficiently in either type of war—restricted or all-out? If, as in Korea, the battle area is limited, strategic bombers with the golden bombsights are seemingly good only as subjects for recruiting posters.

Please keep in mind that I do not say our country should ignore the potentiality of high altitude bombing. I say most emphatically, however, that it is not the only way by which numerical superiority of enemy forces may be offset—it's merely the most expensive.

Economic orientation must be maintained during defense preparations if we're not to defeat our own purposes. One billion dollars represents \$6.80 from every man, woman, child, and infant in America. The Air Force trend is distending the national budget to a point which may eventually approximate \$100,000,000,000—that's 11 zeros, 10 percent of a trillion, and \$666 per head per American with absolutely no assurance it'll be enough—indeed, the inference is definitely to the contrary. Add to this the fact that

no item of war deteriorates and becomes obsolete as rapidly as bombers and related facilities. One doesn't buy a military aircraft, fly it and use it forever. As you know, its obsolescence is initiated the moment its construction begins. The more aircraft in operation the more there must be evolved to maintain the status quo. An increased air appropriation, therefore, is not an end in itself, but by its very nature the beast is a self-perpetuating and expanding organism.

The factors of replacement, new design, modification, and improvement are of prime import should be so obvious that their very mention is superfluous. Yet these same factors of replacement, new design, modification, and improvement loom ominously and prohibitively large when applied not to one type aircraft but to a number in excess of 100 groups (87 now, I think—just give them a little time). Should that be sobering, you need only recall that the more one has the more he wants—at one minute he's rough, tough, and ready for retaliation—later he fears for our Nation's fate because he's operating on a shoestring. Somewhere in the Air Force comments upon my last letter it was implied that I tended to illustrate by exaggeration. If I did so, it was unintentional—but what, pray tell, is General Vandenberg doing with \$20,000,000,000 worth of shoestrings?

Before I conclude I should like to refer to the Air Force letter to Chairman VINSON regarding my letter. They begin by stating that the emotional tone of my comments is typical of the criticism heard in the 1949 hearings regarding the B-36. It would seem that they feel those hearings vindicated their ideas and demonstrated the error of naval viewpoints. As Al Smith used to say, "Let's look at the record." The carrier *United States* was canceled directly or indirectly as a result of this so-called Navy versus Air Force feud. A carrier of this type—over 2 years late, costing nearly twice as much and not quite as large—is now authorized. I believe two may have been recommended. As the Navy suggested in 1949 and as the Korean affair has now demonstrated, the tactical arm of the Air Force is woefully neglected. Although they contend that they're correcting this matter, the proportion of ground support groups remains unchanged under their expansion program. One of their own officers became so disgusted with the tactical neglect that he's leaving the services. We were told in 1949 that unification would save millions and increase efficiency. Under unification as now practiced the Army lacks satisfactory ground support (being corrected with more money), we started with three services and unified them into four and we save by creating an additional bureau with its concomitant employment of thousands of file clerks and stenographic personnel.

A weak tactical air arm is denied—yet all the material is defensive and backed up by profound quotations—mostly by high Air Force officers. One letter from an infantryman is hauled out to glorify tactical support given his unit. Are we to assume that all combat units are so ably aided? They ought to be. The Marine air arm does it as a matter of course every day. I presume the fact that this man is a naval officer's son is meant to illustrate some injustice in naval attitudes on strategic bombing. Either that or it is the one letter they have from a supported outfit.

As to "Mr. Humpton's saying the Air Force called carriers highly vulnerable oceangoing platforms—" it's a direct quote from one of General Spaatz' articles in *Newsweek*. I presume a gentleman of Spaatz' stature is at least capable of accurately reflecting the views of his associates in the Air Force. If naval men are emotional in their arguments,

it may well be due to such impartial news analysis and one-sided criticism.

My data concerning Air Force losses in Korea was from a Defense Department release of this summer. Vandenberg explains by saying that the aircraft supporting troops are at grenade altitudes. So are Navy and Marine Corps aircraft. A comparison of performance and losses here would be interesting. My figures comparing naval and Air Corps performance in World War II are taken from the CONGRESSIONAL RECORD of 1949. If they are inaccurate, the gentleman from Congress who presented them was, shall we say, exaggerating. The exact issue I do not recall—if necessary, I could locate it.

In paragraph 7, my figures comparing naval air performance with Air Force crashes are assumed and presented in eloquent language. I appreciate the sarcastic compliment, but derision is hardly a clear rejoinder. Present accident rates are passed over as 50 percent better than before World War II. I would like very much to know what that means in terms of dollars and cents. This percentage comparison reads like a Soviet report on the accomplishments of the latest 5-year plan. Looks good and tells nothing. Incidentally, as I type this the radio is reporting the crash of a B-50 into an apartment building somewhere. Very well timed.

Paragraph 8 refers to the fact that on the night of February 5 the Air Force dropped nails on roads still behind Red lines. Was it or was it not the intention of U. N. forces to use those same roads as soon as possible? Ton for ton, are the U. N. forces more dependent on rubber-tired vehicles than the Reds for supply or are they not? Perhaps on the night of February 5 the Air Force foresaw the present situation. If so I commend them. As it is now the move looks wise. Potentially it was damn foolish.

As to my contention that the Air Force would have Americans believe it can win any war anywhere, I concede my error. I cannot recall any United States Air Force recruiting statement or civilian publicity film in which those exact words are used.

Attached to this letter are some clippings to illustrate several of my points. You may find them interesting. This letter has already grown too long. In closing I wish to repeat that I write only because I desire to see America establish efficient defense while remaining financially solvent. I may well be wrong, but I sincerely believe that excessive spending for current Air Force concepts fails to meet either of these provisions. It will grow worse, not better.

Respectfully,

LOUIS R. HUMPTON III.

PARKESBURG, PA.

Merger of International Monetary Fund and International Bank for Reconstruction and Development

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. JAVITS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of September 13, 1951:

FROZEN FUND

The governors of the International Monetary Fund, holding their sixth annual meeting in Washington, have come under attack

from delegates sent by Australia, South Africa, and other member states who claim that the fund's vast loan resources of \$8,000,000,000 are being withheld from nations which could put some of it to good use in stabilizing their balance of payments positions. These critics are correct in holding that the fund has been disappointingly inactive. It has been so since opening for business on March 1, 1947. Yet no criticism of the fund's inactivity is valid that fails to take account of the crucial reason for that inactivity. The fund was designed to operate in a world that existed in the hopes of its founders at Bretton Woods, N. H., in 1944, but a kind of world that has not come into existence up to now. The fund's resources have been virtually frozen because they were not meant to make their contribution until after a period of postwar economic transition to fairly stable international conditions had been achieved.

The fund was not calculated to help reconstruct postwar economies nor to redress fundamental imbalances in the trade among nations. Its sponsors never expected its resources to be used by member nations as a substitute for sweeping internal measures to achieve high employment and price stability, nor did they regard the fund as the sole vehicle for international economic co-operation. The purpose for which the fund's resources were planned to be used was in assisting members to protect the value of their currencies from short-run changes not due to basic shifts or disruptions in their foreign trade.

How should the fund use its resources now, in an international environment for which it was not designed? Should they be dissipated in a vain attempt to correct imbalances for which rearmament, underdevelopment or continuing reconstruction needs are to blame? Should they be used as a bonus to members who will reduce trade barriers? Should they remain frozen until normal conditions are restored by other measures or accidents? Each of these alternatives has its advocates. It would seem that mutually satisfactory compromise is unlikely and that the time has come to re-examine the charter of the fund with an eye to reformulating the functions it might reasonably be expected to perform in the world that confronts us.

Remarks of Secretary of State Acheson at San Francisco, With a Comment by the Cleveland Plain Dealer

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. HAYS of Arkansas. Mr. Speaker, there appears to be universal admiration for the manner in which the Secretary of State presided over the recent history-making meeting in San Francisco climaxing treaty negotiations with Japan. The concluding words of Mr. Acheson are inspiring.

Under leave to extend my remarks I include Mr. Acheson's statement quoted approvingly by the Cleveland Plain Dealer on September 10. The editorial is as follows:

A MAGNIFICENT JOB

Every honest man, whatever his politics, must admit that Dean Acheson rose to great

heights in his skillful handling of the Japanese Peace Treaty conference in San Francisco.

Urbane, unflustered, courteous, polite, he parried the clumsy lunges of the Communists with consummate skill. Yet, behind his quiet voice and his calm deportment there was steel, which even the Reds must have recognized.

It is to be admitted that his task was made easier because of the actions of the Reds. The scowling, snarling Gromyko, Soviet deputy foreign minister, was no match for him. Stefan Wierblowski, the Polish chief delegate, was no match either.

The persistent sallies of Gromyko and the Pole and the occasional interposition of Dr. Gertrude Sekaninova, Czechoslovakian delegate, drew good-humored and occasionally sarcastic responses from Acheson. United States Ambassador John Foster Dulles and others.

Television audiences will well recall how laughter broke out on occasions when the Reds pulled some whopper of a lie, or began talking about an absence of democratic principles, which they, in their own countries, have nailed to the cross.

Acheson was in command of the conference every second. Even when he sat with his head in his hands, listening to obvious flubdub dished up by the Reds, he was a commanding figure. He looked and acted like a Secretary of State. Gromyko, for all his pressed trousers and his polished shoes, looked and acted like an ill-mannered bum.

And when it was all over, and the signatures of the representatives of Japan and 48 other peace-loving, liberty-loving nations had been affixed to the document, Dean Acheson spoke movingly, as follows:

"You have seen an act of greatness of spirit, an act, a true act of reconciliation * * * in accordance with the fundamental moral principles of the great spiritual teachers and leaders of all nations and of all religions.

"And it was for this reason, I think, again as Mr. Dulles suggested to us last night, that we were able to accomplish here what we have accomplished, because all of us, in the words of Benjamin Franklin, all of us doubted something of our infallibility, and all of us worked together, giving up much that was close to our hearts, much that was close to our economic interests, for the purpose of bringing about this peace of reconciliation.

"And we were able to do that, because we were doing something that lifted our spirits, something of which we were proud. There was nothing mean. There was nothing sordid which lurked in any corner of this treaty. There was nothing hidden, nothing that could not bear the broad great light of day. * * *

"And as Mr. Morrison said to us this morning, this is not an ending; this is a beginning. We signed this great treaty this morning, but we must live this treaty from this day on. And it depends upon each nation, each individual represented here, each individual of each nation, to make this treaty be what it is in words. And by no means, last of all, it rests with our Japanese friends to see that this treaty yields its true fruits.

"And I say to them that a great, broad highway to a position of equality, of honor, of friendship in the world lies open to you. All the obstacles on that highway have been cleared away so far as governments can clear them away. * * *

"We regret that there are some who were unable or unwilling to join our meeting, and others, we regret, who came here but were unable or unwilling to join in this great constructive effort. But what we have done here, we have done both for ourselves and for those who did not come here, because we

have laid a great peace for all peoples, not merely those here, but for all peoples throughout the world.

"And those who were unwilling to work with us and those who criticized our efforts, for those people we feel no bitterness, but we urge them now to join in the great effort which lies before all of us.

"And may I close this conference with words which, in many languages, in many forms, in many religions, have brought comfort and strength.

"May the peace of God, which passeth all understanding, be amongst us and remain with us always."

We could hope that Dean Acheson might never descend from the high place he made for himself in the esteem of men at San Francisco.

Know Your Waterways: The Cost to Taxpayers

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article published in the Washington Post under the sponsorship of the Marine News, New York, as follows:

KNOW YOUR WATERWAYS: THE COST TO TAXPAYERS

There is much clamor about the staggering amount which the taxpayer will have to pay for the planned conservation and use of the Nation's land and water—about \$1,500 for the average American family has been given wide publicity. That amount is based on some \$53,000,000,000 as the estimated cost of development projects in the construction and planning stage. From the beginning in 1822 up to and including the 1949 fiscal year, the Corps of Engineers has spent approximately \$3,500,000,000 for waterway improvements and maintenance, including every harbor and channel in the Nation; since 1896, about \$2,275,000,000 for flood control. Beginning in 1902, the Reclamation Service has spent about \$1,800,000,000. The total of about \$7,575,000,000 covers a period of 129 years. But approximately 60 percent of the amount was spent during the past quarter century. Even at that rate, should the full \$53,000,000,000 be spent, some 300 years would be required to do it; if the expenditure was at twice that rate, 150 years would be required.

It is certain that many years, perhaps several generations, will pass before a large part of the proposed work will be completed; much of it may never be done. It is not explained that, in any event, the cost to the average family will probably never exceed more than a few dollars in any one year—not such a staggering amount after all.

The planned conservation and use of the Nation's land and water resources will undoubtedly be carried out as prudently in the future as in the past. Rather than being a threat to the Nation's financial stability as some predict, future development will add tremendously to national wealth and strength as similar development has in the past. And the average American family will be greatly benefited rather than being burdened with staggering taxes.

Outstanding Country Newspaper Opposes \$19,019,000 Hand-Out to Grandview, Mo., Cow-Pasture Airport

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. GROSS. Mr. Speaker, on August 20, I inserted in the RECORD several editorials which had come to my attention from newspapers in Iowa and elsewhere in the Nation in support of my opposition to the authorization for a \$19,019,000 hand-out to a hayfield airport at Grandview, Mo., home territory of President Truman and the late Boss Pendergast.

This gratifying support of my opposition is all the more important in view of the fact that the Grandview authorization, which was passed by the House over my protests, has now been passed by the Senate without a single word of protest being raised on the floor and, as near as I can determine, with only nine Members of the Senate present at the time.

I will ask permission to insert in the RECORD tomorrow additional editorials supporting my position in this matter. Meanwhile, here is an editorial from the Traer (Iowa) Star-Clipper, one of the outstanding country weeklies in this Nation and recipient of many awards over the years for distinguished journalism:

GROSS WAKES 'EM UP

Most of the Republican Congressmen in Washington, including other members of Iowa's delegation in the House of Representatives appear to have missed the boat and have shown themselves out of step with public opinion back home when they failed to get behind Representative H. R. Gross' amendment to eliminate from the \$6,000,000,000 military construction bill the Truman proposal to build a \$19,019,000 airport at Grandview, Mo. Gross, who can be depended upon to speak out against the frequent idiotic proposals by bureaucrats for wasteful and extravagant spending by the Government, declared that the Grandview airport is nothing more than a glorified WPA project for the home territory of the Truman family and the late Tom Pendergast, boss of the Kansas City Democratic machine of which our President is an alumnus.

Our Iowa Third District Representative pointed out that in the same bill was a proposal to spend \$22,462,000 on an air base at Knobnoster, Mo., only about 50 miles east of Grandview, and that during World War II millions of dollars were spent by our armed services in building air bases in Iowa, Missouri, and Kansas which have been inactivated since the war for the reason that they were not needed. Among the many idle airfields is the Air Force base at Sioux City, the Navy base at Ottumwa, and a military airfield at St. Joseph, which is only 60 miles from Grandview.

Gross' opposition to this Truman boondoggling won the commendation of many Iowa newspapers. The Des Moines Register, which has not often served as a cheer leader for Mr. Gross, took his part the other day when, after the discussion in the House over the Grandview airport, a Texas Congressman, Representative KILDAY, charged that Gross had revealed classified (secret) information

about the purposes of the Grandview project which would give aid and comfort to the enemy. The Register properly pointed out that Chairman Vinson, of the House Armed Services Committee, had already described the Grandview base's purpose in general terms; that Gross revealed nothing secret at all, and that KILDAY was apparently trying to discourage any comment by Gross or others on why we need a new base in the region of Truman's ancestors, which was precisely what Gross was trying to find out. Said the Register: "The answer, we note, remains unclear, even though the House approved the bill enthusiastically."

The Cedar Rapids Gazette approved of Gross' suggestion that idle airfields at Ottumwa and Sioux City could be renovated and made ready for use in a few weeks and at little expense in comparison with the proposed expenditure at Grandview, and that by using former military installations the Government could save billions of dollars for the taxpayers. "But," the Gazette added, "not until other Congressmen rise above sectional interests will the poor taxpayer ever have his day in court. Don't hold your breath until that happens."

The Marshalltown Times-Republican said, "Regardless of party, our leaders should be sufficiently cost-conscious to avoid duplication or waste of expenditures to please local constituents. There is so much political finagling and wasteful spending by this administration that taxpayers are beginning to worry about the strain which is bound to come on their take-home pay. They should appreciate the courage shown by Representative Gross."

The Waterloo Courier, the Chicago Tribune, and others expressed similar sentiments, and we noted that even our Fair Deal Senator GILLETTE was willing to state publicly that Gross had performed an important service to the public in this instance.

Gross, in his regular weekly letter to the newspapers of the Third District this week, says he has had many letters and telegrams urging the adoption of his amendment—from Iowa and elsewhere—and that one of the best letters was from a citizen of Grandview.

When the Gross amendment came up on Friday, August 10, it was defeated by a voice vote, whereupon Gross offered a motion to recommit the bill with instructions to the committee to strike out the Grandview pork-barrel project, and demanding a roll-call vote. The Democrat majority leader postponed consideration of the bill until the following Tuesday, as only 72 of the 433 Members of the House were present. Gross explains that every week most of the eastern Congressmen start leaving for their homes about Thursday and do not get back to work in the legislative chamber until Monday or Tuesday. He calls these Congressmen the T and T Club (Thursday to Tuesday). A vote on more important measures can be taken only in the middle of the week, because it is so embarrassing to have so many of the House membership recorded as absent on roll calls.

On the following Tuesday Gross' motion for a roll call received only 44 votes—43 Republicans and 1 Democrat supporting it. This was an insufficient number to compel a roll call. The entire bill, including the Grandview project, was then passed by a vote of 352 to 5. This demonstrates how "sincere" are many of our legislators in Washington who talk economy and curtailment of wasteful spending by the Government. Their speeches and their voting records do not seem to be in proper balance.

Gross says he is not through with them yet. An appropriation for these military construction projects is yet to be approved, and our Congressman warns that if the House Appropriations Committee or the Sen-

ate fails to remove the Grandview item from the bill, "I will certainly offer an amendment on the floor to do so unless the bill is brought in under a gag rule and is unamendable."

We think we can assure him that the large majority of the people of Iowa and in many other States approve his courage in this matter.

Jews in Franco Spain

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of my colleagues to the following article which appeared in the August 31, 1951, issue of the Jewish Mail:

JEWIS IN FRANCO SPAIN—A REPORT BY AN EYEWITNESS

(By Dr. David Diringer)

When some little time ago I was invited by the Spanish authorities to visit Spain and to give a course of lectures on Hebrew subjects at the Institute of Hebrew Studies of the Higher Council for Scientific Research, and at Madrid University, I felt some hesitancy, not only because of the sentiments we Jews generally feel toward Spain on historical grounds, but because of my dislike for all that was understood by fascism. Eventually, however, I accepted the invitation, deciding to use the opportunity to see things for myself.

My first surprise occurred when I filled in the necessary forms. I was not required to state my race, religion, or political creed, as is required for quite a number of "democratic" countries today. In Spain itself—though I must beware of generalizing in view of the comparative shortness of my visit—I was struck by the absence of those manifestations that we have come to associate with a totalitarian State. I could move or travel about with a sense of complete freedom.

I had many conversations with Jews and, of course, with non-Jews, particularly those interested in Hebrew studies, but I never noticed any sign of fear—or any sign of the inferiority complex so often noted in other countries—on the part of Jews, or any anti-Semitism on the part of others. In short, I was not aware of a "Jewish problem."

In Spain before the Second World War there was only one significant Jewish community—that in Barcelona—which, unfortunately, I had no time to visit; it now comprises between 2,000 and 3,000 members. It is recognized by the Government as the Comunidad Israelita de Barcelona. There are two synagogues—one Sefardic and one Ashkenazi.

The second largest community is now that of Madrid. There are also Jews in Valencia, Seville, and elsewhere.

The Madrid community was formed during the war. Previously there were scattered Jews, who held occasional services in private houses. The present synagogue is Mr. Kahn, and the treasurer, Mr. 49; services are held regularly on Friday evenings, Saturday mornings, and during the holy days. The congregation is presided over by Professor Bauer. The vice president is Mr. Kahn, and the treasurer, Mr. Lawend. The committee includes the Marquis Cuby, from Gibraltar, and two other members. A temporary rabbi and

shochet have been appointed. The community is quite active, and a communal seder was held on Passover, to which all members of the community—about 200—were invited. The participants included 35 to 40 university students from Morocco.

During the war many refugees entered Spain from Nazi Germany and its satellite countries, many of them without passports or official papers. No obstacle was placed in the way of their admission, the Government provided them with temporary papers, valid for 3 months, during which period the holders were required to report weekly to the police. The refugees were thus given an opportunity to regularize their position; during this preliminary period the majority of them found work or else the prospect of arranging for a start in business; since then, indeed, quite a number have turned to business and attained wealth.

It will, perhaps, suffice to indicate the possibilities by a brief reference to the career of the leading spirit of the synagogue, Mr. Lawenda. Born in Warsaw, he arrived in Spain from South America over 20 years ago almost penniless; he is now a prominent industrialist. During the war he gave much aid to refugees from Germany, Italy, Poland, Rumania, and other oppressed countries. Today his constructive work includes the building of a new synagogue for the needs of a larger community. This, it is hoped, will be ready by Rosh Hashana.

The present temporary synagogue was inaugurated on January 2, 1949, in the presence of representatives of the Government, and of the Jewish communities of Barcelona and Tangier. Official recognition of the Madrid community, as the "Comunidad Israelita," it is understood, will be forthcoming within the next few weeks.

I was somewhat disappointed to find that the Jews of Madrid show no interest in Hebrew studies as such. Indeed, with the exception of the Moroccan students who are concerned with chemistry, engineering, medicine, etc., hardly any are associated with the academic sphere, certainly none with humanistic studies. The great majority are merchants, a small number industrialists, and nearly all are refugees from Central Europe.

In Spanish academic circles, however, there is a keen interest in Hebrew and in Biblical studies. New and important institutes have been founded by the Higher Council of Scientific Research; among them the Institute of Hebrew and Near Eastern Studies, "Arias Mantano," occupies a prominent place. At Madrid University there are two chairs of Hebrew, one held by Professor Perez Castro.

There is, among scholarly circles in Spain, more than a passing interest in things Jewish. The celebration of the eighth centenary of the birth of Maimonides was remarkable in that it reflected the deep interest of Christian Spain in the research that is proceeding on the medieval Jews of Spain. The efforts being made by the Spanish authorities to preserve Jewish antiquities are also worthy of notice: in a sense, they are unique.

Not many countries are proud of their great Jews who, through their contribution to Jewish culture, contributed to civilization in general, but who had no special share in fostering the national culture of their adopted country. In other words, while Italy may be proud of Luigi Luzzatti, the late great Italian statesman and Prime Minister, or France of Leon Blum, the first French Socialist Premier, or Britain of Benjamin Disraeli; while, indeed, some Germans may consider Heine to be their great poet, or Einstein their great scientist, it is doubtful if, for example, non-Jewish Frenchmen were ever interested in whether Rashi or David Qimhi were born in France or Poland, or anywhere else.

One of the most notable exceptions to this rule is apparently Spain, where ancient synagogues are given the status of national monuments, and where Hebrew books and inscriptions and other relics of Jewish glory in medieval Spain, like the Moorish remains, are part and parcel of the Spanish heritage. Indeed, Spanish culture was derived from all countries lying about the Mediterranean Basin. "The art of Spain is alluvial," said V. Lamperez y Romea with a touch of melancholy, deploring the rapidity with which fresh floods of immigration brought their deposit to overlay the past.

It is true that in every age change fell too soon upon Spain. So on Jewish-Mudejar (Mudejars, an Arabic word, meaning "domesticated," is the terms applied to the Spanish Moslems, who preserved their customs, laws, art, and religion, after the country had been reconquered by the Christians) a wind blew from the north, and chilled the plan; it never came to fruition. Professor Georgiana Goddard King, a great authority on Spanish art, compares it with the veins and grains of gold that are dug out of mountains or washed down among the sands of rivers and upon which each age sets its image and subscription; but always it is gold. The splendidly illuminated Spanish Hebrew manuscripts—of which some are to be seen in the British Museum—the two relatively well-preserved synagogues of Toledo and certain other remains are unique jewels; they are molds of this gold which have been formed by Jewish genius on Spanish soil. The origin and the impact of the Jewish-Mudejar art need a more thorough study than they had hitherto received and there is no doubt that the Spanish authorities would favor such research.

Statehood Now

EXTENSION OF REMARKS OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert the following editorial which recently appeared in the New York Journal-American pointing out the need for the grant of statehood to Alaska and Hawaii without further delay:

WHILE WE SLEEP, RUSSIA SNARES

The current session of Congress, like so many of its predecessors, has done nothing but talk about the issue of statehood for Alaska and Hawaii, and of late it has not even been talking about this vital subject.

This amazing indifference, or abysmal ignorance, about the importance of giving the full status of statehood to Alaska and Hawaii is in sharp contrast to the alert awareness of Soviet Russia in its appraisal of these Pacific outposts as indispensable links in the chain of American national defense.

In the case of Alaska especially, the refusal of statehood is leaving the pathway of Russian invasion wide open and virtually unguarded.

The strategic position of Alaska, actually at the doorstep of Soviet Russia, could make America impregnable in any war with the Communist world.

But instead, with the continued failure of Congress to act on the statehood measures the position of Alaska leaves America dangerously weak.

In this connection, National Commander Erie Cocke of the American Legion returned from his recent tour of Alaska with some information that will interest and should awaken the American people.

The Russian propagandists are filling the radio air in Alaska with their version of world affairs, he noted, and their constant theme is that Alaska is historically and rightfully the territory of Soviet Russia and will eventually be restored to its sovereignty.

In fact, not even the name of Alaska is given recognition by the Russian propaganda, the Territory being always referred to as if it were a part of Russia.

If the people of Alaska listen to the radio at all they can hardly help hearing the Soviet broadcasts beamed to them, and, as Commander Cocke reports:

"The crowning insult in these broadcasts is that they never refer to Alaska as Alaska.

"What they talk about is what they term 'Russian-America.'"

In short, our Communist enemies know perfectly well what Alaska means to them in the formulation of plans to attack and conquer the United States, and they are assiduously laying the groundwork for exploiting Alaska when the ultimate assault is made.

But still Congress fumbles the issue of statehood, and continues to leave not only Alaska but also our great Hawaiian outpost almost totally neglected and to all apparent intents and purposes unwanted.

The best barrier to even the making, let alone the successful outcome, of any future Russian claim to ownership of Alaska is to make this rich and vital territory a sovereign American State, and thus inseparable from the American Union.

Why does Congress persist in a policy of procrastination and avoidance on the issue of Alaska and Hawaiian statehood, when only the interest of our Communist enemies are served by that policy, and our own American interests are so endangered?

The Late Honorable Frank Fellows

EXTENSION OF REMARKS OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. HALE. Mr. Speaker, under leave to extend my remarks, I include an excellent editorial on our late colleague, Frank Fellows, appearing in the Talk of the Towns in September 6. The Talk of the Towns is an admirable weekly published in Yarmouth in my district. The publishers are Mr. and Mrs. Francis W. Tully. Mr. Tully was formerly in the Radio Press Gallery here in the Capitol and is well known to many of our Members. We are glad to have him running a paper in Maine. The editorial follows:

FRANK FELLOWS

It is going to be difficult for the voters in the Third Maine District to replace Congressman Frank Fellows, who died last week. He was a hard-working, positive-minded Member of the House, known to his colleagues and to Washington newsmen as a man who voted according to his beliefs, and never hesitated to state his position on an issue. He seldom addressed the House—when he did, he always had something to say, and held the attention of the Members.

His salty, down-to-earth oratory, mixed with Maine wit, made him in demand in

many States during Republican campaigns. Whenever Frank Fellows spoke in North Carolina, a large attendance at Republican rallies was assured, and the same was true in other parts of the country. Only a few days before his death, he delivered one of his typical speeches at the Republican gathering for Senator TAFT in Rockland. After the speaking, we chatted with him for a while, and he remarked on how glad he was to be back in Maine after the long, hot session in Washington. However, he was in the best of spirits, and it was a shock to learn just 5 days later that he had died. During his 12 years in Congress, he had earned the respect of all who knew him.

Grand Coulee Dam Near Completion

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. LARCADE. Mr. Speaker, as per authority granted to extend my remarks in the Appendix to the RECORD, I submit an article from the New York Times, of date September 9, 1951, in regard to the completion of the Grand Coulee Dam. The article follows:

COULEE COMPLETION NEAR—GREATEST POWER PLANT TO REACH TOP CAPACITY THIS WEEK

WASHINGTON, September 8.—The world's largest hydroelectric power plant at the Grand Coulee Dam will be completed this week after 18 years of work on the over-all project—but there is talk of making it still bigger, Secretary of the Interior Oscar L. Chapman said today.

The eighteenth and last generator will go on the line next Friday. Its 108,000 kilowatts will give the plant in central Washington a record 1,974,000 kilowatts of generating capacity—enough to light every home and run every plant in a city the size of Chicago.

Yet the Northwest's soaring needs for power have outstripped even this gigantic capacity, and the possibility of adding a third great battery of generators is being discussed, Mr. Chapman said.

Action Demanded From Congress

EXTENSION OF REMARKS OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. MACHROWICZ. Mr. Speaker, the short recess enjoyed by the Members of the House of Representatives gave them, I hope, an opportunity to get a good view of how the rank and file of our public feel about the achievements, or the lack of achievements, of the Eighty-second Congress.

It must have been obvious to anyone who made any attempt to learn the truth that John Q. Public is quite dissatisfied with the failure of Congress to give any cooperation to the President or to offer any program of its own to combat inflation and the steadily increasing cost of living, which is our public enemy No. 1.

Equally disturbing to the public is Congress' apparent apathy and lack of understanding of the gravity of danger from abroad and the necessity of a more substantial national defense program, including civilian defense.

One of the most striking and glaring deficiencies of this session of Congress, however, is our slowness in making adequate provisions for pay adjustments for the postal employees and other Federal employees.

Everyone recognizes that pay adjustments to these employees are long overdue and that it is nearly impossible for them, under the present pay rates, to meet the steadily increasing cost of living. And yet, after 8 months, the pay-increase legislation is still languishing in the committee. If private industry lagged anywhere near this long in its treatment of the employees, it would have been subjected to attack by Government agencies long ago.

It is not yet too late. Our citizens demand and deserve prompt action from us. Let us put our shoulders to the wheel, give the President adequate legislation to combat inflation, to build up a firm and solid defense from foreign enemies, and lastly, let us, without delay, take care of the crying needs of our own Government employees and adjust the glaring inequities in their pay scales.

They Really Work

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the State, Raleigh, N. C.:

THEY REALLY WORK

A few days ago we were talking to O. K. LaRoque in Kinston. He has been in Washington, D. C., for about 3 years but has now returned to his former job in Greensboro.

Said Mr. LaRoque: "The one thing that impressed me most about my stay in Washington was the hard work done by our Senators and Representatives. The average citizen, back home, has little knowledge of this. In most instances, our representatives in the Senate and House get to work shortly after 8 o'clock in the morning. They stay on the job until after 6 o'clock, and when they return to their hotels they usually carry with them heavy brief cases, stuffed with work which will be attended to at night."

We agree with Mr. LaRoque in this statement. There may have been a time when a Senator or Representative could take things easy in Washington, but that time vanished long ago. He now has to keep plugging away strenuously every day if he wants to keep up with his work. If he fails to do this, it isn't long before it piles up on him in overwhelming fashion, and he's absolutely sunk.

What is the nature of all this work?

Well, in the first place, there are his duties on the floor of the House and Senate and also in committee rooms. There are dozens

of visitors to see daily in his office. There are scores of letters that must be answered promptly. There are various departments and bureaus that have to be visited frequently, and there are innumerable telephone calls.

When you see your Senator or Representative here in North Carolina attending some kind of a celebration or making a speech at some kind of a meeting, you may get the idea that he has an easy job of it, but such an idea is far from the truth. Chances are that he works harder than most of us ever did in all our lives.

Czechs Isolated by Air

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from today's Washington Daily News:

CZECHS ISOLATED BY AIR

PARIS, September 14—France and Britain canceled all airliner flights to Communist Czechoslovakia today.

The measure, which completed an aerial quarantine of the Red-ruled country, was a further reprisal for mistreatment by the Czechoslovak Communist regime of Western Allied citizens.

Yesterday the Allied high commissioners in Germany canceled all Czechoslovak plane flights over Western Germany.

The Anglo-French order forbids any flights to Czechoslovakia by the nationalized French and British airlines, Air France and British European Airways, to Prague.

BLOW FOR OATIS

The order banning Czech flights over Western Germany was largely a reprisal for the imprisonment by the Reds of Associated Press Correspondent William N. Oatis, sentenced to 10 years in prison as a "spy."

A French Foreign Office spokesman said today's ban was decided upon, insofar as France was concerned, to safeguard French plane crews against possible reprisals by the Czech Reds for the Allied ban against Czechoslovak flights over the Allied occupation zones of Germany.

TEMPORARY MEASURE

The French measure is temporary, the spokesman said, depending on developments. It was taken on France's own initiative, he said, and not at the request of either the United States or Britain.

The spokesman said France supported the Allied High Commission's ban on Czech flight over Western Germany because of Czech treatment of French nationals in cases very similar to that of imprisoned American Correspondent William N. Oatis.

The spokesman said the ban on French flights to Prague was ordered because "we simply felt it was a prudent measure to take in view of possible reprisals by the Czechs against our own planes and crews."

He said there were at least two or three French nationals held incommunicado in Prague and that French diplomats have not been permitted to communicate with them. The spokesman said there were also British nationals similarly held in Prague.

In the case of William N. Oatis, it was plain that the United States planned a campaign of retaliation without once using the word in public.

Meanwhile, the Czech train which entered the Allied zone of Germany early this week was still there with 87 passengers who wanted to return to their homeland. The engineer and 26 other passengers have asked sanctuary and probably will receive it.

Praise for Acheson

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of September 11, 1951:

PRaise FOR ACHESON

Back in Washington from the Japanese Peace Conference and a stopover in Kansas City, President Truman highly praised Secretary of State Acheson for the latter's skillful handling of the peace meeting. He told the reporters that he had personally congratulated Mr. Acheson for the firmness and skill with which he had presided over the conference and blocked the Soviet attempts to delay and disrupt the meeting. In the President's typical man-of-the-street language, he said that the proceedings had demonstrated that his Secretary of State "is smarter than any of the guys who have been attacking him."

This forthright statement of the President is significant at this time, because it evidently indicates that he is standing by his Secretary of State and is not yielding to the pressure from various sources to throw his pilot overboard. For many months now, pundits have been saying that Mr. Acheson is a political liability to the administration and would have to be "given the gate." This fulsome praise now, however, would indicate that, if Mr. Acheson wants to stay on, the President will keep him in office right through for the election next year.

The millions of people who saw and heard Mr. Acheson handle the peace conference will agree with the President that Acheson handled the situation with consummate skill. Firm, but dignified, and with no show of ill-temper at Gromyko's rough tactics, he made a remarkable impression upon the American people. Even photographically, his appearance on television was more pleasing than most of his published photographs.

Any suggestions of alleged Red coloring in Acheson's political philosophy were completely dispelled by the way he handled the opposition from the delegates from behind the iron curtain. As a matter of fact, unbiased observers in other countries have always given Acheson high credit for his capacity as a statesman, and they have derided the silly attempts to make Red capital out of his friendship for Alger Hiss. It is probable that Mr. Acheson could have been more diplomatic with the American people in announcing his continued friendship for Hiss after the latter was convicted of conspiring with the Reds, but standing by a friend who had gone wrong was never considered by the American people to be a bad trait in any man.

Secretary of State Acheson is now going into conference at Washington with the

British and French foreign ministers, to prepare a pact with Western Germany to bring the people of that country into the family of free nations, as has been done with Japan. Mr. Acheson has emerged from the Japanese conference with such added prestige, that he can be depended upon to be the guiding spirit in forming this new alignment with Western Germany.

The William N. Oatis Case

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. JENSEN. Mr. Speaker, Uncle Sam should bar operations of Soviet press agents here, at least until the U. S. S. R. gives William N. Oatis his freedom.

Every red-blooded American is demanding just and proper retaliation against the Reds, both within and beyond our shore, for the unwarranted arrest of William Oatis.

The Fraternal Order of Eagles of Council Bluffs, Iowa, are to be highly commended for adopting the following resolution.

RESOLUTION ON WILLIAM N. OATIS ADOPTED BY THE EAGLES LODGE OF COUNCIL BLUFFS, IOWA

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation, and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional, and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being; and

Whereas, by its action, the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred for our free world; and

Whereas representatives of the Soviet news agency, Tass, have the free run of the United States of America, and are permitted to attend press conferences at our national seat of government, at which often much off-the-record information is discussed: Now, therefore, be it

Resolved, That Council Bluffs Aerie, No. 104, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be uncensured in its efforts to secure the freedom of Mr. Oatis by honorable means, and

we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world; and be it further

Resolved, That Aerie, No. 104, of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet news agency, Tass, as well as all satellite nation correspondents from official Government press conferences, where vital information may be revealed, until the release of Mr. Oatis has been secured.

Big Three Show-Down Near on Spain

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Constantine Brown which appeared in the Evening Star of September 10, 1951, written in his usual excellent style and which should be of interest to all who are anxious to strengthen the position of the United States in the present difficult world:

BIG THREE SHOW-DOWN NEAR ON SPAIN—FRANCO'S ROLE IN WESTERN DEFENSE TO BE THRASHED OUT AT ALLIED CONFERENCE OPENING HERE WEDNESDAY

(By Constantine Brown)

The foreign ministers of Britain and France will meet next Wednesday here in town with Secretary of State Acheson to discuss informally a number of mutual problems regarding the strengthening of the European defense against possible Soviet attack.

Although the discussions will be informal, the three top diplomats will deal with problems far more vital today than the signature of the Japanese Treaty. The questions of full sovereignty for the West German Republic and America's military and economic assistance to Spain are expected to be the most controversial items.

Top-ranking Senators and military men hope fervently that the "spirit of San Francisco" will linger on for some time and cause the diplomats to weigh these controversial matters more in the light of what is best for the free world than political expediency at home.

Although the Japanese treaty has provisions which are distasteful to some of its signatories, the free nations have presented a solid front which alone prevented the Soviet and satellite representatives at San Francisco from sabotaging the peace treaty. We learned last week that if the non-Communist countries stand together the Red sabotage technique can be defeated.

For the first time in 5 years we have spoken an emphatic "No" to the Kremlin and its stooges. San Francisco has proved for the first time that the Allies and their friends can be as tough as the Muscovites.

The question of American military and economic assistance to Spain ranks among the top questions for discussion next Wednesday. The French and British governments have signified unmistakably that they oppose our "unilateral" policy toward that country.

The French objections are purely political. The Plevin government is hanging by a thin thread, and in order to obtain the support of some Socialist factions in the National Assembly, it must make an impressive display of opposition to any help to Franco's Spain.

The British are in a somewhat different position. The Laborites, who supported Spanish Loyalists during the Civil War actually hate the Franco regime. The Conservatives are concerned over our decision to help Spain, because they fear foreign interference with Britain's Mediterranean line of communications.

This sounds absurd to Americans, yet it is so. For centuries the Iberian Peninsula was considered the exclusive preserve of the British Empire. When we planned operations in North Africa in 1942, it was necessary to obtain naval bases in the Azores from Portugal. The British representatives in the Combined Chiefs of Staff in Washington objected strongly to the United States approaching Portugal directly. They insisted that the bases be obtained by London in accordance with the centuries-old Portuguese-British alliance.

Last week the Labor government, which does not stand very high with Portugal's Premier Salazar, had to accept a direct American-Portuguese agreement on the Azores bases.

All British political parties will continue to look askance at any foreign power obtaining bases in the Iberian Peninsula. They know that we now are negotiating with the Spanish Government for the establishment of American air fields in a number of localities, including the Seville-Malaga and Almeria-Alicante areas in southern Spain and Spanish Morocco, right across from Gibraltar.

The British should know better than anyone else that there is no other motive in our efforts to obtain bases in Spain than the common defense of the West. Yet, they definitely dislike the idea of any alien power getting so close to Gibraltar, which is supposed to guard the western Mediterranean and give Britain a predominant position in that sea.

It is this reason as much as the ideological antipathy of the Labor government which causes London to oppose our assistance to Franco.

In a recent conversation an important British official asked, "How would you like it if we obtained air bases in Colombia and Panama, thus flanking your canal?"

The State Department has had its hand forced by Congress and by the Pentagon to accept closer association with Spain. The strategic arguments in favor of giving that country an opportunity to improve her economy and modernize her armaments were so strong that both President Truman and Secretary of State Acheson could no longer reject them.

But our Government has yet to convince our principal European Allies that what we intend to do for Spain is in the common interest of the North Atlantic Treaty Organization and not a selfish move on our part.

Meat Quotas

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. BRAY. Mr. Speaker, the latest beef production figures show that meat

packers in Indiana did not get their fair share of cattle during the 4 months slaughtering quotas were in effect from April through July.

In June, for example, when OPS slaughtering quotas were 80 percent of last year's kill, Indianapolis production was down to 63.9 percent, while New York packers were up to 102.3 percent and west-coast slaughtering was running 109.1 percent.

It is apparent that Mr. DiSalle did not even attempt to force the packers in New York and California to observe the quota regulations. Indiana's farmers, packers, and consumers alike suffered because of this situation which resulted from the quota system of the Office of Price Stabilization.

The record indicates that slaughtering quotas did not work, and I feel that Congress should ignore the President's request for authority to reimpose them.

The drain of cattle from Indiana, which would not have happened if slaughtering quotas were effective, is due to the freight forgiveness policy of the Office of Price Stabilization. Packers on the east and west coasts can pay more for cattle because freight forgiveness on their ceilings exceeds actual freight costs.

Packers are permitted to pass freight costs along to consumers, and that means that housewives in Indiana have to pay the freight east on cattle and west again on beef.

International Agreements

REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. MILLER of Nebraska. Mr. Speaker, the conference now going on in Washington between the so-called Big Three—that is, England, France, and the United States—should be all to the good. It is well for nations to sit down together and discuss their many problems, because the world is much smaller today than it was a generation ago.

I do hope that Dean Acheson, our Secretary of State, does not make any secret commitments or alliances. I can remember, that in the past, secret commitments committed the United States to conditions which should have been approved by the Congress of the United States. I am sure my colleagues remember some of the commitments made at Yalta and Tehran. The then President of the United States sat in this very well of the House and told the Congress that no secret commitments had been made. It was months afterward when it was discovered that Mr. Stalin, Roosevelt, and Churchill had made secret agreements which could well cause a third world war. This should never happen again. Certainly the Congress is entitled to know what commitments are to be made.

The Welfare State

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very able statement entitled "Handwriting on the Wall," prepared by Mr. H. L. Spencer, of South Pasadena, Calif.

There being no objection, the statement was ordered to be printed in the Record, as follows:

HANDWRITING ON THE WALL

In the last few weeks, with the dismissal and return of Douglas MacArthur, the American people have lived through one of the most profound, disillusioning and emotional experiences in their history. Coming on top of the RFC and Kefauver revelations, confidence in the integrity and good judgment of our national administration has sunk to new low levels. A sudden realization has come to us that there must be grave flaws in the basic concepts by which we have been governed in recent years.

A remarkably clear statement of our present national predicament is contained in a new book, *The Welfare State, a Mortgage on America's Future*, by the brilliant young economist, Jules Abel. A powerful foreword by Raymond Moley points out that our only hope now lies in Congress. In the next few months congressional decisions must be made which will affect our national destiny for generations to come. Constructive results could come from our recent shock treatment if the emotional ferment of recent events produces overpowering public demand that the conditions which so endanger the future of our fine country be corrected and corrected now.

Mr. Abel makes the point that we are all being exhorted and hoodwinked to believe that the more we spend the better off we are and that the greater our debt the greater becomes our prosperity. Based on the misleading statistics of gross national product, so freely used by Washington exhorters, that may appear to be the case. Certainly if we can scatter a few billions of pump-priming seed corn and from that harvest a great crop of increased income, everything will be lovely.

But, as Raymond Moley says, "Everything is fine if you don't look too closely." What the country needs is to throw away its rose-tinted glasses, get out the old bifocals and really take a close look at the fine print. For gross national product and national income are deceptive figures in that no account is taken of the taxes that must be paid to sustain the effort of pulling ourselves up by our bootstraps. Nor is any allowance made for the fact that a large part of gross national product is made up of non-income-producing expenditures such as those for war and so-called foreign investments. For example, in 1939, 1.4 percent of gross national product was for war expenditures. In 1944 this figure was 41.8 percent.

Currently the expenditures for war and foreign investment must be high and going higher. If we continue blindly to leave it to this administration to plant our pump-priming seed corn we need not be surprised if the harvest consists of a large crop of war-producing bayonets rather than income-producing plowshares.

Gross national product less various adjustments and taxes gives the data for disposable personal income. This is the true measure of our prosperity. It is the figure that most of us are interested in as we struggle to keep our heads above the rising tide of inflated living costs. Payroll-tax deductions buy no groceries.

Therefore it would appear that the best test of our national economic health, following a 20-year effort to squander ourselves into prosperity, would come from a comparison of the trend lines of disposable personal income and net public and private debt. These are shown on the chart below and it at once becomes apparent that income has not grown as rapidly as debt. The rather rapid convergence of these trend lines over the last 20 years shows at a glance how serious is the situation in which we have become involved by adoption and long continuation of a reckless fiscal policy motivated in large part by political expediency and sold to the trusting public by continued and deliberate misrepresentation of the true meaning of gross national product and national income.

This administration's apparent conviction is that national welfare depends upon continued spending and expansion of debt. While this may have been true in earlier years, when our rate of true growth was greater and our debt was small, for later years the data shown here does not bear out this assumption. For instance, in 1946 there was a decline of \$8,500,000,000 in debt but an increase of \$8,200,000,000 in income after taxes. On the other hand, in 1949 an increase of \$11,400,000,000 in debt produced an actual decrease in income. These facts, together with the converging trend lines of the chart, may well be interpreted as statistical handwriting on the wall to warn us that we have reached our debt limit or point of no return beyond which further debt increase will do great harm.

Certainly, unless we are willing to embark on a course of full-scale runaway inflation, further increase in debt must be prevented. Only thus can we preserve the value of our money, wages, the hard-won pensions of our workers, and the country's working capital savings that have come from 150 years' development of a rich and virgin land.

With the records of German, French, and other foreign inflations before us, people everywhere are coming to realize that such inflation in the United States would be tragic. Responsible Members of Congress should be aware of this rapidly spreading sentiment. We are beginning to recognize the fact that confidence in the dollar is the basic measure of confidence in our national credit, if not in the country itself. In the world crisis confronting us, maintenance of our national credit is a first order of business if we are ever to rearm ourselves and our friends.

We are involved today in a dangerous international situation complicated by a crisis of long-continued and cumulative fiscal management. Further adventures in the economies of fairyland will serve no purpose. It is time for the American people to call on their elected representatives in Congress to face the facts of our situation resolutely and work out a bipartisan program which will provide realistic solutions. Such a program should include:

1. No further increase in debt.
2. Pay-as-we-go taxation.
3. Sharp reduction in nonrearmament spending at home and abroad.
4. A free hand to Federal Reserve Board in debt management.
5. Modification of the automatic inflation escalator provided by present farm parity, cost-of-living wage relationships.
6. For the time being and in the interest of the country—forget politics.

The Crusade for Freedom**EXTENSION OF REMARKS**

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the New York Times editorial of Tuesday, September 11, headed "The war of words." This editorial pays tribute, so justly earned, to the Crusade for Freedom. This is a most important and vital element in the so-called war of words. Under the leadership of a distinguished board, the Crusade for Freedom is developing programs and taking the kind of initiative which would be difficult for a Government agency.

May I particularly call to the attention of the Senate the most important part played in the development of the Crusade for Freedom by Mr. Frank Altschul, of Greenwich, Conn., who has spark-plugged the most important activity of the crusade, Radio Free Europe? Mr. Altschul has been a moving and a determining spirit in the great development of the crusade, and, I think it is fair to say, the moving spirit of its broadcasting operations beamed to the satellite countries behind the iron curtain.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WAR OF WORDS

The Crusade for Freedom launches here today its campaign to raise funds for the construction of two more radio transmitters which will bring its message of truth to the Soviet satellite nations. At present, the Crusade is operating the most powerful radio station on the Continent, Radio Free Europe in Munich, which now beams broadcasts for more than 11 hours each day to Czechoslovakia. The new transmitters will be equally as powerful and will broadcast to Hungary and Poland. It is expected that similar radio facilities will be established in Asia to bring the voice of the free world to that continent.

What the Crusade for Freedom is doing is vitally necessary. At present the Soviet Union is bombarding those within its orbit with an unceasing humdrum of propaganda vilifying the United States. At every turn our every action is slandered, criticized, and distorted. The Soviet propaganda effort has reached a new intensity and we are threatened with the loss of many friends unless we can bring the true picture back into focus.

The Voice of America is playing an important part in this struggle. But more than an official voice of our Government is needed. The Crusade for Freedom is endeavoring to enlist 25,000,000 Americans to support its program—to bring the message of truth from a broad cross section of a people who are free to a broad cross section of people who long to be free. It is the kind of program with which every thinking American will agree; it is the kind of a program which every thinking American will want to support whole-heartedly. The Crusade's local campaign headquarters is at 5 East Fortieth Street, New York.

Central Arizona Project**EXTENSION OF REMARKS**

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. SAYLOR. Mr. Speaker, Mr. Raymond Moley, not only an eminent national columnist now writing for Newsweek magazine and many newspapers, but also a man whose views on economics and the general affairs of our Nation have been long respected, has written a commendable letter to the Governor of Arizona, disclosing the planned extravagance of the present administration, especially with regard to reclamation projects.

I believe my colleagues would be interested in reading this letter, inasmuch as every State of the Union is interested in the problem of increasing taxation.

Mr. Moley uses the central Arizona project as a potent example to illustrate his point.

His letter to Governor Pyle, of Arizona, follows:

TO THE GOVERNOR OF ARIZONA

(By Raymond Moley)

Hon. HOWARD PYLE,

Phoenix, Ariz.

DEAR GOVERNOR: Your friendly letter, to which I assigned this space last week, raises a number of issues which deserve a considered reply.

My criticism of the central Arizona project was not based on California propaganda, but on the Senate debates, in which your Senators McFARLAND and HAYDEN took a leading part, on the Arizona case as presented to the House committee in March, on the letters and documents of the Interior Department on the subject, and on other pertinent public documents. I have not approached the subject from the standpoint of the dispute between Arizona and California, but from the standpoint of a taxpayer in a wholly remote State.

It is perfectly apparent that Arizona is entitled to a very considerable amount of the water of the Colorado River that now flows to the sea. It is also clear that the needs of Arizona are urgent and critical. It is clear, too, that your predecessors in office and your State legislature were negligent in failing to impose restrictions on the veritable looting of the water table by wells drilled for the raising of quick and highly profitable crops by people who rushed there in war years for that purpose. You are commendably trying now to lock the stable.

I cannot agree that the question submitted to the Secretary of the Interior was "loaded." It was: "How much interest on the national debt occasioned by the project would be borne by the Nation's taxpayers, assuming a 75-year repayment period and a reasonable construction period?" His answer, \$2,075,729,000, is a matter of arithmetic. The immense size of this interest charge is due to the incorporation in the bill of a principle of accounting that has never hitherto been approved by Congress and that is a product of the Interior Department's desire to enlarge its activities, regardless of expense and despite the old principle that irrigation and

power should pay for themselves. In power projects the rate at which power is sold is fixed high enough to pay interest on the money borrowed to build the project. That interest has been paid into the Treasury, as it should be. Under the principle in this bill, this interest money or interest component would be used to pay the costs of irrigation, thus giving a subsidy to farmers-users of the water. Also, the period of repayment is fixed in the bill at 75 years, thus nearly doubling the time which has always been the rule in reclamation projects.

If Arizona is so in need of water and if the return is so favorable as the figures you have presented suggest, it should abide by the traditional rules that have always governed reclamation.

There is also something very strange in the claim of sponsors of this project that the whole thing must be authorized by Congress before the Supreme Court can determine the dispute with California about how much water Arizona is entitled to. I realize that lawyers argue that the Court cannot take jurisdiction of the case unless actual damage can be claimed by California. Other lawyers argue that it can. It would seem that this is a most expensive way to bring a law suit. If the Court should refuse the cheaper way, then it would seem that Congress might set up some temporary body to adjudicate the case.

Finally, the cost of the project can hardly be judged by the Reclamation Bureau estimate of \$788,000,000 for building. If past experience with such reclamation projects is any guide, the cost will be two or three times that. Also, it is admitted that the proposed dam will fill up with silt in 30-odd years unless another dam or dams are built up the river.

It would seem that Congress ought to take a long look at the whole immediate and remote cost of this and all related projects and then measure them against the capacity of American taxpayers to meet such expenses in a period when immense sums must be raised for armament and foreign aid. These, it seems to me, are considerations which must be measured against the recognized needs of your State.

Whom Shall We Trust?**EXTENSION OF REMARKS**

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. VAN ZANDT. Mr. Speaker, it is always helpful to have the opinion of the folks back home and with that thought in mind, I want to share the views expressed by Mr. J. E. Holtzinger, publisher of the Altoona (Pa.) Mirror, by inserting the following article that appeared in the September 1 issue of said paper:

WHOM SHALL WE TRUST?

Many prominent men who are in close touch with our international affairs seem to feel that war with Russia is inevitable. While we do not concur with their opinions on all matters, we might weigh very carefully what they have to say. If, as they say,

war is inevitable, then we should carefully reexamine our policy and make sure that we are doing our very best; first, to avoid war, if that is still possible; secondly, to be fully prepared for war should it come.

We also must be very careful into whose hands we place the instruments of destruction which can have a decisive effect on the outcome of any war and upon the amount of damage that may be inflicted upon us if we are involved in that war. We do not believe that it is best to put implements of war into the hands of people who may offer but feeble resistance or no resistance at all to an aggressor and risk having those instruments of death and destruction turned against us by an enemy that prefers to capture its war materials rather than to build them.

It has been argued time and time again that a weakened European economy plays into the hands of international communism. It also might be well to point out that a weak industrial structure in central Europe will be of little use to Russia in the event of all-out warfare.

Germany was a powerful foe because her industries were powerful. When their industrial potential was destroyed by strategic bombing the German field armies were weakened, and eventually they collapsed. The only possible use Russia can make of Germany and other central European powers is to harness their industrial production to the Soviet war machine and make them produce the heavy machinery of destruction that is so essential to modern warfare. We wonder at times if those who are responsible for the administration of Marshall-plan aid to Europe never think of this danger.

At the present moment Congress is debating on legislation that would cut off from American aid those powers that sell or trade to Russia those things that increase the potential military strength of the only power that can threaten our peace. It seems to us that all aid should be stopped immediately when evidence of such trading or selling is uncovered. It also seems to us that if the Republican Party, which is the official watchdog of the tactics of the party now in power had able leadership these things would be brought out into the forefront and made an issue in the campaign that is now shaping up for 1952.

The party of the opposition has a definite duty to perform. It should make itself clear on fundamental issues, and it should quite openly oppose those unsound principles which someday may lead to heavy loss of life and place in jeopardy those things we all hold dear.

Taxes have been raised and raised again until today every American is contributing much more to the Government than he is able to save or to use for his own advancement. Too many of those tax dollars are being sent abroad to help people many of whom have a standard of living much higher than the average American can hope to achieve. Every now and then there is quite a little discussion about the powerful lobbies that operate in Washington to influence legislation for this or that American group. Seldom have we seen it mentioned that other powerful lobbies, the male members of which stay at the best rooms in the best hotels and the female members of which are dressed in silk, satin, and mink coats, also are present in Washington. These are the lobbies of the nations seeking Marshall fund hand-outs.

It would be interesting to know just how much of the money expended on aid to other countries goes to men and women of the millionaire class in those nations, how many members of the nobility and former nobility are getting handsome hand-outs from these funds which are in the long run collected from the working people of this Nation.

How many of this international set will be in the front lines defending democracy against the onslaughts of communism when the chips are down and battle smoke is in the air? It is our guess that most of them will take special planes carrying so-called VIP's to the neutral corners of the world where they can live a life of ease and safety while the sons of the republic fight it out with the hordes of Communists.

We believe that if most of the money now being expended on aid to foreign nations were devoted to getting our own house in order, to building up the world's greatest air force and the world's greatest pile of atomic weapons, war would not be inevitable. If war came it could be one of short duration. There would be no stockpile of American-made goods to be used by the enemy, there would be death and destruction for him if he chose to challenge the mighty nation that was wise enough to put its trust in God and its ammunition and war materials into American hands only.

Robbing Americans of the just fruits of their labor to build up new privileged classes in foreign nations will not strengthen this Nation. It can only weaken it. Taxing our great industrial machine to such an extent that its own progress must be halted is playing into the hands of the enemy.

There are three things that a really great American Congress can do to build up national unity and national strength. First, they can put a limit to the taxing powers of the Nation so that its great industrial and individual initiative is not crippled; second, they can make sure that all money expended by the Federal Government is spent for the essential things which will contribute to national preparedness and, third, they can insist that the money spent abroad is drastically reduced in amount and that it is entrusted only to such products and to such uses as will aid America and not place strategic materials within reach of our potential enemy.

Flood Control in Kansas

EXTENSION OF REMARKS OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to again call the attention of Congress to the disastrous floods which recurred in Kansas this year. The total actual property and farm damage to our State runs well over \$700,000,000. Every river and every watershed in Kansas, with the exception of those controlled by a flood-control dam, contributed greatly to this damage.

Kansas covers an area 200 miles by 400 miles and is comprised of 105 counties, 97 of which counties were seriously affected by this excessive and uncontrolled rainfall.

I am including an article published in the Chanute (Kans.) Tribune, which gives a detailed report of one of the rivers in Kansas, and the amount of damages, county by county, on the Neosho-Cottonwood Rivers which flow through my district. Since the publication of this article, these rivers have again overflowed and added more damage to our people.

The article follows:

LOSS ON NEOSHO IS \$42,500,000; URGENT ON DAMS—VALLEY ASKS CONGRESS FOR FLOOD CONTROL STEPS AT THIS SESSION

Residents of the Neosho-Cottonwood Valley in Kansas today figured their tangible losses in the July flood at \$42,500,000.

They immediately joined in an urgent plea to Congress for flood protection so they can rebuild.

At Burlington, John Redmond, president of the Neosho-Cottonwood Flood Control Association, prepared a complete report to Congress on the emergency need for reservoirs which were authorized last year.

He emphasized that recovery in the valley depends upon action in this session of Congress to start work on the entire flood-control program, consisting of four dams upstream on the Neosho and Cottonwood.

The Senate Appropriations Committee approved last week a quarter million request for planning Strawn Dam, located north of Burlington and below the junction of the Neosho and Cottonwood Rivers. Redmond said that residents throughout the valley are appealing for additional appropriations for preliminary construction at Strawn and for planning of dams at Marion, Cedar Point, and Council Grove.

The people in these flooded valleys need this start on flood control so that they can rebuild and repair their property in safety, he said.

The estimated cost of the four dams is \$36,220,000, which Redmond pointed out is considerably less than the Kansas damage estimate of \$42,529,573 in the July flood alone. This was 1 of 40 floods recorded in the Neosho Basin in the past 20 years.

In Oklahoma the Neosho flood caused additional millions in damage last month. District Judge William Thomas, of Miami, Okla., who is preparing the damage estimates, is away on business. However, C. M. Bartlett, publisher of the Miami News-Record, said he had heard estimates as high as \$20,000,000 on losses suffered in Oklahoma above the Pensacola Reservoir.

The estimate of losses in Kansas was computed from figures obtained from each of the 11 counties in the Neosho-Cottonwood Basin. Half of the losses were accounted for by farm buildings, crops and equipment.

The figures were compiled by Representatives Howard Emmel, of Iola, Ernest Mabry, of Council Grove, and Ernest Johnson of Chanute, a committee representing the flood-control association.

Their figures showed type of property:

City dwellings.....	\$7,774,746
Industrial, commercial.....	4,605,525
Public property.....	2,551,650
Farms, crops, equipment.....	21,135,452
Railroads, roads, levees.....	6,462,200
Total.....	42,529,573

The committee members said the figures represent only visible losses. Much damage could not be calculated, they said, such as waste of soil, interruptions in essential services, and losses which will become apparent in the future.

The losses by counties in the Neosho-Cottonwood Valley were computed as follows:

Allen.....	\$5,410,423
Chase.....	5,214,150
Cherokee.....	928,500
Coffey.....	6,160,000
Crawford.....	35,750
Labette.....	2,575,000
Lyon.....	5,730,750
Marion.....	5,518,850
Morris.....	5,120,000
Neosho.....	4,624,500
Woodson.....	1,211,650

Total..... 42,529,573

The Late Honorable Frank Fellows**EXTENSION OF REMARKS**

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. KEARNEY. Mr. Speaker, I was shocked when informed of the death of my dear friend, Frank Fellows.

He was a great American—old fashioned in his sturdy type of Americanism—a fine legislator, and one who put the interests of his country first. Of great courage, he never swerved from the path of duty to his constituents and country. To his family I extend my deepest sympathy.

Another Exposé on Tidelands Grab**EXTENSION OF REMARKS**

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. HÉBERT. Mr. Speaker, David Kleck, of the New Orleans Times-Picayune and New Orleans States, has come up with another exposé of the shenanigans behind the tidelands grab by the Department of the Interior.

The story grows more unbelievably fantastic with each new exposé brought to light by Mr. Kleck.

It could well be the story of Grimm's Fairy Tales or the Arabian Nights with its Ali Baba and the Forty Thieves. Or it could well be the saga of another Get Rich Quick Wallingford or a present-day Ponzi. Nothing seems to be beyond the realm of those behind this scheme to take away from the sovereign States that which rightfully belongs to them.

But why labor you with my observations and comments when Mr. Kleck is doing such a splendid job and the New Orleans Times-Picayune and New Orleans States are doing such a magnificent job in their own right.

Read this fantastic story for yourself. Here it is:

CORD SERIOUS IN SCRIP GRAB TRY FOR GULF OIL MILLIONS—PLAN HELD ACTIVE AS INTERIOR OFFICIALS FAIL TO HAILE IT

(By David Kleck)

E. L. Cord isn't fooling when he says he wants millions of dollars worth of oil-bearing tidelands off the Louisiana coast.

Cord's plan to grab Louisiana offshore oil wells in exchange for Federal land scrip is a serious plan. It is highly active today because the United States Department of the Interior is reluctant to take any action to halt it.

While the Department acted with speed to deny claims filed by a variety of get-rich-quick operators under the Federal mineral leasing act, it is not acting quickly in the scrip-exchange case of Cord, one-time luminary in the motor car, shipbuilding, and aviation industries.

Cord, who holds a variety of Federal land scrip entitled the owner to certain Federal

lands in the public domain, contends that this scrip applies to the Gulf bottom and has filed a claim on 92 acres containing oil or gas wells.

The claim was filed over 8 months ago. This was about the time a man who identified himself as a Cord associate was trying to sell the scrip "titles" to Louisiana through Gov. Earl K. Long and attorney general Bollivar E. Kemp, Jr.

The price asked of Louisiana was 5 percent of all Gulf production, or about \$68,000 monthly at present rates, and a truly incredible figure in the foreseeable future, depending on exploration.

CORD CITES AUTHORITY

When the Times-Picayune questioned how strongly Cord felt about the validity of his claim based on land scrip, he wired from Beverly Hills, Calif.:

"As to validity of scrip suggest you examine the acts of Congress signed by the several Presidents of the United States under which scrip has been issued.

"They grant the highest and best titles in the land.

"Precedents are too numerous for recital, but include Miami Beach, Sioux City, Iowa, Phoenix, Ariz., and Seal Beach, Calif. The most recent congressional act pertaining to scrip was that of August 3, 1949, authorizing issuance of duplicate certificates of Gerard scrip."

WON'T DISCLOSE TALKS

The Times-Picayune asked Cord if he had received any expression on the scrip validity from any Federal official. He answered:

"At this time we do not feel privileged to disclose conversations between ourselves and governmental officials."

If, by some means, Cord gains title to the areas he claims, the Nation could be staggered by the news of 1 man grabbing off oil wells producing 18,000 barrels daily with the vast potential of the Gulf lying completely in his hands.

Cord's associates first began approaching Attorney General Kemp 2 years ago, mainly through telephone calls, in an effort "to work something out with scrip," but it was not until last February that Roy Maggart, Los Angeles, journeyed to Baton Rouge to lay the cards of the "big deal" on the table. The details of this meeting are vouched for by Kemp.

WOULDN'T REQUIRE ACCOUNTING

Because the United States Supreme Court had ordered Louisiana to give an accounting of offshore revenue from June 3, 1950, Maggart told Kemp he had a "plan" to enable the State to avoid this heavy payment.

Maggart told the legal official that the scrip certificates collected by Cord "at a cost of over \$1,000,000" would be given to the State. This "title" could not be broken, Maggart contended, and Louisiana thereby being the owner of the Gulf production, would not have to account to the Federal Government, despite the Court decision.

The payoff to Cord and associates, Maggart said, would come from "jacking up the big oil companies who would give in without quibbling since they are so anxious to get the thing settled." The plan would not cost the State a cent, Maggart said, as Louisiana could simply make the oil companies increase their royalty payments on Gulf oil.

CORD WOULD GET "CUT"

The increase in royalty payments would cover the State's usual royalty, a cut to the Federal Government, and a cut to Cord and associates, according to the stipulations of Maggart's plan. The idea, in effect, would raise royalty rates from 12½ percent to 25½ percent.

Maggart proposed:

1. The State to continue to receive 12½ percent of production.

2. The Federal Government to receive 12½ percent, but because the lease would be in Louisiana waters, Maggart figured that the Government would return 37 percent of its cut (as is customary when oil is produced on Federal land within a State), leaving an actual payment to the Government of only 8 percent.

3. Cord and associates would get 5 percent.

4. The total would be only 25½ percent which, he said, the oil companies would be glad to settle for.

The plan, according to Maggart, was purposely designed to make everyone happy, but Kemp was not overjoyed and told him it was something he could not and would not handle. He then took Maggart to see Governor Long. At that time Kemp asked Harold Teasdel, president of the California Co., who was in Baton Rouge on other business, to join Long, him, and Maggart for lunch and listen to the proposition.

(Subsequently, the California Co. filed a brief protesting Cord's claims with the Interior Department. The brief cites four grounds which they consider would invalidate his claims.)

LONG SAYS PLAN FANTASTIC

Long listened to Maggart's proposition and later told Kemp it was too fantastic to worry about until a Federal ruling had been made. Maggart has not returned to Baton Rouge.

Five years ago a trace of Maggart appeared in an official brief prepared in the California case by Robert W. Kenny, attorney general of California, and William W. Clary, assistant attorney general, which says: "For a long time one Roy Maggart has been active on behalf of a group of applicants for Federal oil leases. On numerous occasions Maggart has tried to persuade large California oil companies to settle the tidelands controversy by buying out the interests represented by him."

Last December Kemp was contacted in Washington by A. P. Scott, Reno, Nev., who said he was a Cord associate and wanted to talk over a scrip proposition. Scott said, in effect, that "we own the land, the courts say so, the Government will say so, and we'll raise hell if they don't recognize us in a hurry."

Scott then arranged a meeting for Kemp with Oscar Chapman, Secretary of the Interior, and the matter was discussed. The legal significance of the scrip was placed in the hands of Mastin G. White, solicitor for the Interior Department.

ACTION HELD UP

This week, 8 months after Cord's application was filed, the Washington bureau of the Times-Picayune asked White why he had not rendered an opinion on the validity of the scrip.

The reason no action had been taken, he said, was because "we are waiting until the Supreme Court tells us whether they are State lands or Federal lands."

(White was apparently referring to the matter of the line of demarcation. The matter of the California boundary is before the Supreme Court now.)

White maintained that no reason exists for the Interior Department to stick its neck out until Congress finally acts on the quitclaim bill which Washington observers predict will not receive final action this session.

ONCE HEADED AUTO PLANT

The House-passed quitclaim bill gives the States title to the 3-mile limit and the United States title to the Continental Shelf edge. The majority of Cord's claims lie beyond the 3-mile limit.

In addition to Cord's claim on Louisiana, two scrip applications have been filed against

Texas offshore areas for 40 acres each, and eight applications in California, four of these for 40 acres and the others for 900, 79, 734, and 246 acres.

Cord, a one-time auto salesman who rose to the status of a multimillionaire and manufactured the Cord and other automobiles, once fled to England to escape kidnapping threats. In August 1937 he quit as chairman of the Cord Corp. which had resources of \$65,000,000.

Cord quit the post shortly after a Federal judge enjoined him and Morris Markin, then president of Checker Cab Manufacturing Co., from manipulating stocks in that and other Cord affiliates (aviation, ship-building) on the Nation's securities exchanges. The court issued the order at the behest of the Securities and Exchange Commission. Cord and Markin, while consenting, denied violating the market regulations.

LOUISIANA CLAIM INGENIOUS

Cord, then 43, sold out 658,000 shares of stock in Cord Corp. for \$4 a share. His holdings had amounted to 30 percent of the outstanding stock.

The bill of complaint contended that manipulating forced an artificial rise in stock of the cab company from \$7 a share to \$50 a share. Cord now lives on Wilshire Boulevard, in Beverly Hills, Calif., and maintains ranches in California and Nevada.

The scheme Cord applied to the Gulf oil wells has already been used for the basis of applications in California, but off Louisiana his procedure of claiming is ingenious to the point of being fascinating.

Acting for himself and as trustee for the Santa Fe Pacific Railroad Co., he produced scrip which had been issued under five different acts of Congress: Porterfield Warrants Act, 1864; Soldiers' Additional Scrip Act, 1872; Valentine Scrip Act, 1872; Forest Lieu Scrip Act, 1897; and Isaac Crow Scrip Act, 1907.

The Soldiers' Act gave scrip in lieu of a cash bonus to Federal soldiers of the War Between the States. The Forest Lieu Act allows lands in a public forest to be exchanged for public lands elsewhere. The other scrip acts were passed to satisfy various claims against the Government.

BOUGHT UP SCRIP

The Santa Fe Pacific Railroad Co. was the owner of forest lieu scrip amounting to 280 acres. Cord collected an additional 1,690 acres by buying up scrip under the other acts.

But, as United States Representative Edwin E. Willis pointed out in a recent letter of protest to Interior Secretary Chapman, the Forest Lieu, Soldiers' Additional, Valentine and Crow Acts contain the words "not mineral."

The Porterfield warrants say nothing about minerals.

Cord apparently figured that the Porterfield warrants would provide him most substantial claim to the Gulf wells, but he only had collected 120 acres of this type. He solved the problem by splitting this acreage into 92 claims of 1 round acre each.

These round acres he plotted on top of each oil well in the Gulf and included gas and shut-in gas wells.

The majority of Gulf wells are drilled at slants from single platforms. One platform may have as many as 11 wells slanting off at different angles. To achieve the difficult feat of placing these round acres directly over the bottoms of these slanted wells, Cord had to have accurate engineering information. This information can be obtained in a variety of places, including the company itself, the Louisiana Department of Conservation, and the Interior Department, assuming that agency had collected such information.

CLAIM 1,932 ACRES

Cord found the problem of locating his claims on top of the bottom holes, located mainly by subsurface geometry, so difficult that he sometimes went awry and claimed an area above nonproducing sands.

To make his claim complete, Cord then added up the remainder of the acreage under the other scrip acts and applied it around these Porterfield round acres to make squares of 21 acres each. His total claim amounts to 1,932 acres.

Cord's reasoning is apparent. If the other scrip can be shown to be nonapplicable, the Porterfield warrant acres around each well will be the chief talking point. Oil companies who have plotted the curious Cord claims on their holdings consider that his claim represents an engineering work of some ingenuity.

This claim, serial No. 022604, is now on file with the Bureau of Land Management, Interior Department.

Cord first came to attention in the tidelands controversy when he, and other speculators, were denounced on the floor of the House of Representatives by Representative Willis, who had learned of their use of the venerable certificates.

OBJECTIONS LISTED

Of the 1,932 acres claimed by Cord, the California Co. has leases on 756 acres and the majority of the oil wells in the Gulf.

The oil company's protest delivered to the Interior Secretary cites these grounds why the claim should be denied:

1. The offshore areas are not public lands within the meaning of the act which provides for the land scrip certificates.

2. The ocean areas below low-water mark has been reserved and set aside and therefore is not open to entry and selection under these acts.

3. The lands described by Cord are not available because they are known to be mineral lands.

HOME IN GULF NOT INTENT

4. The ocean area below the low-water mark is not subject to selection under the land scrip acts because it has not been surveyed and is not subject to survey by public land surveys of the United States.

But Willis provides another reason why he thinks the application should be denied. In the letter to Chapman, he said:

"Quite aside from law and jurisprudence, everyone would concede, I think, that Congress never intended to say in effect to the original holders of the certificates: 'You have been good soldiers. Unfortunately, we have no funds with which to pay you a cash bonus, but we want you to be good citizens and settle with your families on a tract of the public domain. Here, therefore, is a scrip that entitles you to select and live on a farm at the bottom of the Gulf of Mexico.'"

But the Interior Department has taken no action.

Willis adds, in the same letter.

"I am concerned, however, about the fact that whereas your Department turns down mineral leasing act applications within a matter of days, no action has been taken on the Cord application, filed on February 5, 1951. I would like to know the reason for this delay, and I hope you will agree with me that the Cord application should be immediately denied."

R. D. Searls, Acting Secretary of the Interior, answered Willis' letter, saying that the scrip applications had been receiving the personal attention of Chapman, who was then on the west coast.

That was 3 weeks ago. Chapman has said the Cord application was "fantastic," but no matter how fantastic or what kind of bill passes the Congress, a decision will have to be made.

That hasn't been done yet.

Time Wobbles On

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. VAN ZANDT. Mr. Speaker, the following editorial appearing in the September 9, 1951, issue of the Cincinnati Enquirer discusses my remarks in the CONGRESSIONAL RECORD on August 6, 1951, regarding the unwarranted attack by Time magazine on the National Guard in the August 6, 1951, issue:

TIME WOBBLES ON

In its usual flip style—and evidently about as accurately as usual—Time magazine a month ago ridiculed the National Guard and Reserve, quoting "candid Pentagoners" as saying that the National Guard is wobbly, often clique-ruled, often riddled with politics, and should either be abolished or strictly disciplined.

Representative JAMES E. VAN ZANDT has given effective answer in a speech in the House of Representatives, asking that the magazine identify the "candid Pentagoners" and explain why they supposedly told Time something very different from what they told the House Subcommittee on Appropriations for the Military Establishment. Representative VAN ZANDT asserted flatly that the article was a "vicious canard, manufactured out of whole cloth and utterly unwarranted." He added that: "This is not the first time that Time has vented its spleen against the Organized Reserve Corps but more particularly the National Guard."

The Pennsylvania legislator then went on to cite the imposing record of strength build-up which the National Guard has achieved in the various States in recent years, with one-third of the force now in active military service. He recalled that even the old National Guard in World War I was good enough to prove the decisive factor in the defeat of the imperial powers of Central Europe, that it was good enough to account for 18,827 of those killed, for 40 percent of the wounded, and for 38.4 percent of the ground gained. He added, "The same thing held true in World War II, and it will hold true in any war of the future."

Terming the article "a vicious slur on a group of patriotic National Guard men and reservists who take their obligation to their Nation seriously and are willing to do something about it while others play or criticize," Representative VAN ZANDT closed with the assertion that "if Time is bent on helping Russia and her satellites, then I submit Time is using the proper means to do so."

On behalf of the battle-tested Ohio National Guard, we say "Amen" to all the Pennsylvanian's remarks.

Statement by Gen. W. Anders

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I

include therein a statement made by Gen. W. Anders relative to one of the most shocking crimes in human history, namely, the unjustified murder of thousands of Polish officers who were prisoners of war and whose bodies were found in a mass grave in the Katyn Forest.

This is a very important statement on the subject and should be read by every Member of Congress. House Resolution 390, to investigate the Katyn Forest massacre, now on the Union Calendar of the House, should be passed without delay.

STATEMENT MADE BY GEN. W. ANDERS ON THE 28TH OF APRIL 1950, AT A PRESS CONFERENCE CALLED ON THE OCCASION OF THE TENTH ANNIVERSARY OF THE KATYN MURDER

Although it is 10 years now since the Katyn crime was committed, the Katyn case as such can by no means be treated as closed. That is why I feel it my duty to raise it again and remind the public opinion of the democratic nations of its existence.

1. THE VICTIMS OF THE CRIME, THE PLACE AND DATE OF THEIR DISAPPEARANCE

The victims of this foul murder were my own countrymen and my comrades-in-arms, most of them officers who, in the same way as I did, having fought in September 1939 against Hitler, found themselves taken prisoners of war by the Red army, the then German ally, who joined Hitler in his assault by stabbing us in the back over the eastern frontiers of Poland.

Two years later, after the outbreak of war between Germany and Russia and after the signing of an agreement between the Polish Government in London and the Soviet Government, I was released from Soviet imprisonment and appointed commander of a Polish Army to be formed in Russia from among the Polish prisoners of war, civilian prisoners, and deportees. Soon after I had set about my task it became apparent that about 14,500 prisoners of war were missing, mostly officers who had been formerly inmates of 3 large prisoner-of-war camps in Kozielsk, Starobielsk, and Ostaszew. It was further established that, ever since the disbandment of these 3 camps which had taken place in April and May 1940, except for some 400 men who had been transported to a camp in Gruzowice, all the others had vanished without a trace and without ever giving a sign of life. Not a clue about what had happened to them could be found in spite of a meticulous search which lasted nearly a year and in spite of several interventions at the highest level in Moscow including two personal interviews with Stalin himself, at one of which General Sikorski was also present. All we ever got was a score of deceitful and vague answers. It was obvious that the Soviet Government was unwilling to explain what had happened with the thousands of missing prisoners of war taken by the Red Army in 1939.

2. THE KATYN GRAVES AND THE INTERNATIONAL CONSEQUENCES OF THEIR DISCOVERING

But when in April 1943 the Germans made their announcement about the discovery of the Katyn graves, the Soviet Government immediately came forth with a ready version about the alleged capturing by the Germans of several thousands of the missing Polish prisoners of war during the summer of 1941, and about the subsequent murdering of them by the Germans in August and September 1941. Furthermore, when the Polish Government, headed by General Sikorski, sent in a request to the International Red Cross asking for an investigation of the whole case, the Soviet Government not only refused its consent to any such investigation

but moreover took this Polish initiative as an excuse for the severing of diplomatic relations with the Polish Government in London.

3. THE KATYN CASE BEFORE THE NUREMBERG TRIBUNAL

The Katyn case came before the Nuremberg tribunal as part of the general trial of the chief German war criminals by an international tribunal. As prosecutor of this point of the indictment appeared the Soviet Union representative and therefore a representative of a government which was a suspect No. 1 in the case of the Katyn crime included in the indictment. Moreover, among the four members of the jury there also sat a representative of this suspect Government. But there was no representative of Poland whose sons and soldiers were involved and who therefore was most entitled if not to accuse at least to plead and give evidence. True enough that delegates of the Warsaw administration were sent to Nuremberg and did appear there although only in a secondary role, but I do believe that there is no longer any doubt as to the real character of the Beirut regime. But even to these agents of Soviet interests in Poland the right to speak in the Katyn case was denied.

Nevertheless and in spite of such a composition of the international tribunal at Nuremberg, the Katyn crime, although included in the indictment, was omitted from the judgment. There is no mention about this atrocity in the long list of inhuman crimes proved to have been committed by the Nazi Germans. The significance of this fact is enormous. It means that—since it was found impossible to prove that the Germans had perpetrated this crime—one of the greatest atrocities committed in this last war has been ignored and its culprit has escaped with impunity. The very principles of justice therefore call for the appointment of a new international tribunal before which the Katyn case should be brought. Neither should it be thought that although this case no longer occupies the official bodies of international justice or that at present nothing is heard about it at Lake Success, that it has been finally settled, that the crime will be forgotten and that the conspiracy of silence hovering over the mass graves of Katyn will last forever. On the contrary, to quote a sentence from an excellent article by Mr. G. F. Hudson in a recent issue of the quarterly International Affairs, "The unquiet dead of Katyn still walk the earth."

4. THE UNEVEN STRUGGLE FOR JUSTICE

We Poles will never forget Katyn. Having lost the right to raise our voice on the international forum after most of the countries had withdrawn their recognition of our government, deprived of the possibility of appealing directly to governments and to the institutions of international justice, we have nevertheless prepared with perseverance our indictment. For years we collected every scrap of documentary evidence, we scrutinized ever detail, and we informed both the governments of democratic countries and the public opinion of the free countries about the result of our work.

Speaking of publications available to all, the most exhaustive material is to be found in the book *The Katyn Crime in the Light of Documents*, to which I have written a foreword and which was published in Polish in London in 1948 and in French in Paris in 1949. An English translation of this book is ready for publication and awaits a publisher. Further to this documentary work there is a whole chapter about Katyn in the book *Stalin and the Poles*, published last autumn by Hollis & Carter, and containing a foreword written by the President of the Polish Republic. Important evidence is also contained in the memoirs of J. Czapski, consisting of two books, *Souvenirs de Starobielsk*

and *La Terre Inhumaine*. I have also related the story of the Katyn crime in my memoirs which were published by Macmillan under the title "An Army in Exile." All these books are lying on this table ready for anyone who would care to look through them.

In our endeavors to make known the truth about Katyn we were by no means alone. Time and again we have found understanding among generous people, not least here in Great Britain. They have never hesitated to stand up in defense of a righteous cause, and have claimed justice for us in defiance of the materialistic considerations and the short-sighted attitude which seemed to dictate to many of the free governments the policy of silence in the matter of Katyn in preference to the risk of irritating the Kremlin. I wish to express here my sincere thanks and appreciation to all those who preferred to put justice and truth before illusory political interests, and especially may I be allowed to express my deep gratitude to those of our proved friends who are present here today.

5. THE AMERICAN COMMITTEE FOR THE INVESTIGATION OF THE KATYN MASSACRE

Voices claiming justice in the Katyn case have been also raised many a time in other countries, especially in the United States of America. I wish to mention here particularly the speeches in Congress of the Honorable GEORGE A. DONDERO on July 7, 1949, and of the Honorable RAY J. MADDEN on September 29, 1949, both of whom courageously and outspokenly demanded the conviction of those guilty of the Katyn crime.

Finally, toward the end of last year, an initiative in the United States of America which calls for our special gratitude has led to the formation of the American Committee for the Investigation of the Katyn Massacre under the chairmanship of Mr. A. Bliss Lane, the former United States of America Ambassador in Poland. We greet the announcement of such an impartial investigation of the Katyn case as an important and positive step toward the vindication of the principle of international justice.

6. POLISH EVIDENCE IS AN INDISPENSABLE ELEMENT IN ANY PROCEEDINGS RELATING TO THE KATYN MURDER

I also hope that in any future proceedings relating to the Katyn case the second essential misfeasance committed at Nuremberg will be avoided, namely, that Polish evidence was not heard by the court. By Polish I understand of course evidence given not by Soviet puppets but by free Poles entitled to demand the truth and to speak in the name of the victims and of the injury suffered in this case by the entire Polish nation. Moreover the hearing of the Polish side in any trial of the Katyn case cannot be dispensed with, not only because the very nature of legal procedure calls for it; it should be heard also because only when the material assembled by the Polish side can the evidence supplied by both the potential culprits be rightly estimated and the actual culprit determined.

7. WE ACCUSE THE GOVERNMENT OF THE U. S. S. R.

I deem we are sufficiently prepared to appear before any tribunal. Not only have we gathered all the available evidence but on the strength of the proof we possess we are positive that the Soviet Government is guilty of having committed the Katyn crime; that the 14,500 Polish prisoners of war in Russian hands were murdered during April and the first half of May 1940, therefore at a time when Soviet Russia was still at peace and on friendly terms with Hitlerite Germany; that, therefore, the Kremlin is guilty of having calmly decided to murder in cold blood practically the whole of the Polish officers' corps together with a few thousand other prisoners, all of whom had fallen into the hands

of the Red army in September 1939, and whose only guilt was of having been the first to fight against totalitarian aggression.

I shall briefly sketch the following main points on which rests our firm conviction about the Soviet guilt and our indictment against the Soviet Government.

(a) It is an uncontested fact that all the murdered Polish prisoners were alive and in Soviet hands earlier in the spring of 1940. All statements brought forth by the Soviet Government that, while still alive, they had found themselves out of reach and no longer in the responsibility of the Soviet authorities and that therefore they must have been murdered by someone else are false and obviously untrue and no proof can be given to support such statements.

(b) Throughout the 10 months from August 1941 till July 1942 while vainly searching for the missing prisoners all over the Soviet Union, we had exchanged notes with the Soviet Government and had held innumerable conferences and interviews in this matter; but we never received any information about the falling of these men into the hands of the Germans in the neighborhood of Smolensk which was the story the Soviet Government put forth immediately after the revealed discovery of the Katyn graves.

(c) Soviet statements which claim that the Polish prisoners in question were alive till August-September 1941, at which time they were murdered by the Germans after having fallen into their hands when the Germans took over the Smolensk district, are absolutely with no foundation and no proof has been ever produced to support such a version. The truth is that ever since the spring of 1940, no sign of life has been given by any of the missing prisoners while every evidence retrieved from their bodies such as thousands of newspapers, letters, and other documents proves irrefutably that the lives of the victims came to an end in spring of 1940.

(d) The Soviet Government never gave its consent for the admittance of international impartial experts to the Katyn graves. It objected against it in April 1943 when the Polish Government requested the International Red Cross to investigate the case, neither did it invite a single international expert to investigate the graves when, 6 months later, the Katyn district was once again in Soviet hands. On the other hand the International Commission of Experts invited by the Germans to Katyn included, further to experts coming from countries occupied at the time by the Germans or allied to them also Dr. Fr. Naville, professor of forensic medicine in Geneva, and therefore from a country which was absolutely neutral. The report of this Commission, dated April 30, 1943, stated the Soviet guilt.

(e) The official Soviet Communiqué about the Katyn massacre, published in January 1944 by a commission composed entirely of Soviet citizens contains so many contradictions, obviously fictitious facts and false statements by feigned witnesses that it only strengthens the conviction about the guilt of the Soviet side.

(f) In spite of the privileged position the Soviet side had in Nuremberg no new arguments in favor of the Soviet version produced at the trial. On the contrary, by failing to prove the guilt of the Germans the trial although indirectly also incriminated the Soviet Government.

8. THE GROUP OF OFFICERS THAT ESCAPED THE MASSACRE

Before I end I should like to assure you that we welcome any inquiries and are willing to supply you with all explanations referring to our attitude in this matter and about the documentary material we possess. We also have among us a few of the former prisoners of war from the three camps which

were liquidated in 1940. They belonged to that group of 400 sent first to the Pawliszczew Bor and later to the Głazowicz camp and which was the only group to be spared from massacre. They can give you evidence particularly about the important circumstances of the evacuation of the camps and can testify about the ceasing of all correspondence with their lost comrades, a fact which they had learned from letters they received from their own families in the country.

9. MY APPEAL TO THE PUBLIC OPINION OF THE FREE NATIONS

I thank you, gentlemen, for having come here today and for your attention throughout my rather lengthy explanations. May I be allowed to appeal through you to the public opinion of the countries you represent as well as to that of other free and democratic countries and ask for their support of our endeavors tending to elucidate the Katyn case and our plea for the appointment of a new international tribunal which would be called upon to investigate this crime and to punish the culprits.

Because, in my opinion, only if all the war criminals of this last war will meet with adequate punishment will this be understood as a warning for the future and will give a guaranty that human principles will be maintained in case we find ourselves involved in a new armed conflict.

Anti-Nationalist Influence

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the September 12, 1951, issue of the Peoria Star, entitled "Anti-Nationalist Influence Is Still Powerful in Washington":

ANTI-NATIONALIST INFLUENCE IS STILL POWERFUL IN WASHINGTON

There are excellent reasons for believing that the Truman-Acheson regime was on its way toward recognition of Communist China a few months ago, that it was reconciled to the loss of Formosa to the Reds, and that it would have permitted the Red China Government to sign the Japanese Peace Treaty. That these things did not happen is due entirely, we think, to the public exposure of improper influences steering our Far East policy, and of dangers to our national safety which were being ignored by the administration. Once the public suspicion was thoroughly aroused, Dean Acheson was forced to change his course in Asia.

But no one is to conclude that the friends of Communist China—who are the foes of Chiang Kai-shek and the Nationalist Government on Formosa—have given up the fight in Washington. Evidence that they are still powerful is seen in new charges of corruption in the Chiang Kai-shek Government. It is being objected that a \$300,000,000 bill to aid the Nationalists should not be approved because of alleged fraud and shady deals in Formosa.

One Washington newspaperman—and he takes himself most seriously—sums it up in this solemn pronouncement:

"The whole troubled relationship of the United States to China involves the appraisal of the strength and integrity of Generalissimo

Chiang's regime, first on the mainland, now on Formosa."

It seems to us that this overlooks a factor fully as important as Chiang's strength and integrity; that is, an appraisal of Harry Truman's strength and integrity.

If the Government of the United States is to consider withholding \$300,000,000 aid from Chiang because it doubts the strength of his Nationalist leadership, and fears that grafters within his own ranks will get some of the money, it is in a comical position. The last 12 months are unprecedented in American history for the amount of fraud and corruption exposed in high places in our Government.

If we withhold aid to Chiang, what is the result? We give aid and comfort to the Red regime. As between the two alternatives, how could there be any doubt of our choice? Assume that there is fraud in the Nationalist Government. It still exists as a power against communism in Asia. It is absurd to think of probing the moral character of a friendly Chinese Government when a hostile Chinese Government is killing American boys.

Friends of Communist China have used the technique before. It is now being probed in detail by a Senate committee. The aid that might have been given to Chiang in time to prevent the Red conquest of China was withheld when doubts of Chiang's strength and integrity were shrewdly planted in strategic places in Washington. Congress should be well acquainted with the technique by this time and should soberly consider the fact that the anti-Nationalist influence is still powerful in Washington.

Congressman Potter Speaks on Americanism

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 23, 1951

Mr. MACK of Washington. Mr. Speaker, our colleague, the Honorable CHARLES POTTER, of Michigan, on Saturday evening, September 8, delivered an address on Americanism to an audience of 2,000 at Aberdeen, Wash., and I offer it for publication in the Appendix of the RECORD under leave to extend my remarks.

The occasion was an "Alert America" observance sponsored by Aberdeen Post No. 5 of the American Legion. All patriotic labor—both AFL and CIO—civic and community organizations united in making the observance a most successful one. The observance did, I am sure, much to stimulate interest in freedom and liberty when these are under such bitter attack from alien forces.

I hope all Members will read Mr. POTTER's address and, knowing of the success of the Alert America Week celebration staged in Aberdeen, that they will endeavor to have patriotic organizations in their own districts undertake similar programs.

Representative POTTER's address follows:

Mr. Chairman, ladies and gentlemen, I am most happy to be here in Aberdeen, Wash. I was fortunate to be in your great

State a few days this spring, and the same as any other visitor, I thoroughly enjoyed my visit. The hardy pioneer stock of the people of our great Northwest makes a Michigander feel much at home because so many of you migrated from my section of the country. When your Congressman, RUSSELL MACK, asked me if I would be your speaker tonight, I was most pleased to accept.

I am particularly pleased to be able to participate in your Alert America campaign. The American Legion Post of Aberdeen receives the thanks of every loyal, patriotic American citizen—not only of this community or the State of Washington, but of the entire country. This is the first program of its kind to my knowledge in the country. It is my hope that the fire of patriotism that has been kindled here today will sweep the country and brand the spirit of Americanism on the heart and conscience of every citizen.

In many segments of our society today, people appear to be afraid to demonstrate any evidence of our American philosophy. If they do, the enemies of our way of life charge them with being superpatriots, reactionary, witch hunters, and other names intended to slander the good American.

Many of you in the audience tonight have in the past actively heeded the alert call. You have assembled at the call of a bugle or mustered at the sound of the bosun's whistle in World War I, II, or in Korea. You fought—and many died—on strange soil and unfamiliar waters: for what? So that your children and your children's children would not have to make life's greatest sacrifice—that of placing their own lives in jeopardy on the field of battle. Yes, but we also fought because of a firm belief and a shining ideal—that being the American way of life; a way of life unexcelled in any civilization. We were convinced that our form of representative government was best. We believed in individual freedom, where a poor immigrant can become a great industrialist—where a poor farm boy can become President of the United States. Yes, we gladly fought to protect our free institutions which have developed under the protection of our Constitution.

Did we fight so that when we returned to our loved ones, our community, and our country we might become cogs in a diabolical, socialistic machine? We did not. Why is it when we have fought so hard and prayed so long for lasting peace, that peace is not with us?

The free people of the world today are challenged as never before. This insidious challenge is international communism. International communism assumes an octopus-termitic character. The octopus characteristics are evident in the aggressive feelers of the Soviet Union utilizing their armed might to suppress and strangle their victims, such as Poland. The termite characteristics have been demonstrated time and time again by the Communists' organized efforts to bore from within a government structure by honeycombing the moral, political, and economic fiber. The government then lacks strength to ward off this internal aggression and becomes easy prey for communism, as for example Czechoslovakia and China.

While both external aggression and internal penetration differ in appearance, they supplement each other and both have the same objective—that of bringing all countries and all people into their web in order to carry out their mission of communizing the world. This has been their objective since the days of Marx and Engle, who conceived this diabolical philosophy.

Most Americans today realize that communism is a false philosophy and shudder to think of ever having to live in a Communist society, but despite this fact the Amer-

ican public knows very little about its operation here in the United States. You have heard it said many times by sound-thinking Americans that there is too much fuss being made over communism, that there are not enough Communists in this country to do any damage, and many say "Let them sound off, no one pays any attention to them any way." Of course, this type of thinking plays right into the hands of the Communists.

It has been my privilege to be a member of the Committee on Un-American Activities. My service on this committee has dramatically brought home to me that the Communist movement in the United States cannot be taken lightly and that it is a real and distinct threat to our form of government and our way of life. I have seen the Communists who have appeared before our committee and noted the hate in their eyes, ungodliness in their hearts, and conspiracy on their lips.

Tonight let us get a good look at the Communist Party in the United States and see how it operates. Much of the information our committee or the FBI receives comes from former members of the party who have come to realize the hypocrisy of communism and are now willing to aid their Government by giving the FBI and our committee all known information concerning the party as they experienced it. They all say as soon as they were recruited into the party, they went through a period of training or indoctrination. The basis for this training, which was not only required reading, but actually serves as a Communist Party member's bible, is the Communist Party—A Manual in Organization, written by J. Peters. J. Peters for many years was the representative of the Cominform or the Communist International Committee in the United States.

Permit me to quote from this manual, which I have had photostated, as to the role and aims of the Communist Party: "As the leader and organizer of the proletariat, the Communist Party of the United States of America leads the working class in the fight for the revolutionary overthrow of capitalism, for the establishment of the dictatorship of the proletariat, for the establishment of a Socialist Soviet Republic in the United States, for the complete abolition of classes, for the establishment of socialism, the first stage of the classless Communist society."

Let us analyze again the aim—which I have just read—of the Communist Party of the United States of America. The Communists' own manual states: "The Communist Party is to lead in the fight for the revolutionary overthrow of capitalism." Can that leave any doubt in anyone's mind as to what is the Communist Party's main effort? It is to destroy our republican form of government and supplant it with what? Supplant it, and I quote, "with a Socialist Soviet Republic in the United States."

Many people will claim that revolution does not necessarily have to be violent or forceful, and that the Communist Party would not resort to forceful means. Let me quote to you from another section of their manual. In the section dealing with party discussion and freedom to criticize, we find this paragraph:

"We cannot imagine a discussion, for example, questioning the correctness of the leading role of the proletariat in the revolution, or the necessity for the proletarian dictatorship. We do not question the theory of the necessity for the forceful overthrow of capitalism. We do not question the correctness of the revolutionary theory of the class struggle laid down by Marx, Engels, Lenin, and Stalin."

In other words, the doctrine of forceful overthrow of our Government by the Communist Party is a basic doctrine which Communist Party members cannot even question. Let me repeat again this one salient sentence: "We do not question the theory of

the necessity for the forceful overthrow of capitalism." That says nothing about a nonviolent revolution. It says nothing about overthrowing capitalism by constitutional means. But it does specifically say "forceful overthrow." Analyzing the paragraph further, it is important to note that the Communist Party which claims to be a great advocate of freedom of speech, freedom of discussion, civil rights, individual rights, forbids these same rights within their own organization. The paragraph from the Communist Manual just read forbids the questioning of the basic theory of the Communist Party. Members cannot question the writings of Marx, Engels, Lenin, or Stalin. They cannot even question the necessity for forceful revolution.

The Communist Party has a most effective organization held together by the strictest of party discipline. Party discipline is enforced from the top down. Any deviation from the so-called party line, any questioning of party principles or objectives, subjects a member to reprimands or expulsion, and, of course, we know in many cases extinction is the inevitable punishment. We have only to refresh our memory by reviewing the famous purge trials behind the iron curtain and the assassination of Trotsky. If a party member is given an assignment to perform, some duty which has been agreed upon by his superiors, despite any objections he might have to carry out such assignment, it is compulsory he carry it out despite any personal wishes to the contrary.

Until recent date a great many people considered the Communist Party of the United States of America as a minor political party and did not consider its revolutionary aspects. We naively believed that the Communist Party within our own borders was a native organization not under the control of the Soviet Union. Now, however, we are awake to the realization that the ultimate objectives of the Communist Party—whether it be in this country or any other section of the world—are always to overthrow existing governments by revolution and establish the Communist society instead and to receive its orders through its tightly knit organization enforced by the strictest discipline from the Soviet Union itself.

The leader of the Communist Party of today is Joe Stalin. He actually is the brain of the octopus whose tentacles reach into every country of the world and into practically every community. If we need proof that the Communist Party is under the domination of the Soviet Union, we have only to cite the oath which a person takes when he becomes a member of the party. That oath reads:

"I now take my place in the ranks of the Communist Party, the party of the working class. I take this solemn oath to give the best that is in me to the service of my class. I pledge myself to spare no effort in uniting the workers in militant struggle against fascism and war. I pledge myself to work unsparingly in the unions, in the shops, among the unemployed, to lead the struggles for the daily needs of the masses. I solemnly pledge to take my place in the forefront of the struggle for Negro rights. I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism. I pledge myself to remain at all times a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States."

No American can be a member of the Communist Party and be a loyal American. He is pledged to defend not the United States of America, but the Soviet Union. In case of an all-out war waged by the Soviet Union against the United States, members of the Communist Party are forced to aid the Soviet Union and hamper and sabotage the defense effort of the United States.

The Congress some years ago passed what is known as the Smith Act. This act makes it unlawful for any person to belong to an organization which believes in the overthrow of our Government by force or violence. This year the Supreme Court upheld the constitutional validity of this law in the case where the 11 Communist leaders were convicted. We can see from the very oath of membership that the Supreme Court decision was a correct decision and that members of the Communist Party are traitors to the United States.

I personally am convinced that the Congress has further responsibility in an effort to combat the Communist menace in the United States. First, we should outlaw the party. The courts have established, and it is a known fact, that the Communist Party is not a political party but an agent of a foreign power. Therefore, it has no legal right to disguise itself as a political party and appear on our election ballots. Secondly, our statutes should be revised so as to impose the same penalties on membership in the Communist Party as now provided for treason. There is no doubt in the mind of anyone who has studied the Communist movement that its philosophy, its actions, and its training have welded together a most despicable, dangerous group of revolutionist traitors to free society and to the human race that civilization has ever encountered.

I have endeavored to stress some of the high lights as to the functions and aims of the Communist Party and to show its conspiracy nature. However, much of the work done on behalf of the Communist Party is done not by the closed party itself, but rather through various Communist-front organizations, utilizing great numbers of non-member sympathizers, misguided idealists, and many innocent individuals who fail to realize the Communist Party is controlling their organization. It is not just happenstance that many worth-while organizations have been taken over by the Communist Party. This is a designed effort on the part of the Communist Party to take over large organizations and to use them to carry out their objectives. The Communist Party refers to this effort as "party fractions." I wish to quote again from the Communist Manual: "The fraction is an instrument in the hands of the party through which the policy of the party is brought to the organized masses and through which the party gives leadership to members of mass organizations." The main effort in the establishment of fractions is in labor organizations. The Communist Party has since its inception endeavored to appeal to the working men and women. Quoting from the manual "Fractions are built in all the trade-unions and other mass organizations of the workers. In all unions and in cultural, fraternal, sport, and unemployed organizations of the workers or farmers, in all united front organizations, in all conventions and conferences of such organizations where there are at least three Communists, a Communist fraction must be organized."

Members of the Communist fraction work with a singleness of purpose to get on select committees, to hold a controlling office in the organization which they have infiltrated. If you have an organization of say 300 members and out of that membership there should be 10 party members, one of their group would be selected as the secretary of their fraction. The Communist members of the organization would meet and report to the local Communist Party unit advising that unit of actions that the organization—made up mostly of non-Communists—plans to take. The unit will then instruct its 10 members to carry out a certain policy. The 10 will work in unison in an effort to gain support of the total organization membership. You can readily see that in most mass organizations, it is very easy for a small, well-disciplined minority, working with a

singleness of purpose, to direct and control the policies of the entire organization. This is done without the vast majority of the organization membership realizing what is happening.

Let me to quote you from the Communist Party manual as to what is said about the function of the fraction: "The party fraction in a union or a branch of another mass organization meets regularly before the meeting of this organization. At this meeting, the members of the party fraction discuss and decide how to apply the policy of the party in the organization; how to introduce the party campaigns; how to recruit new party members from the union; how to get new readers for the Daily Worker. No party member has the right to speak or act in the union or other mass organization against the decisions of the fraction. The party members must always act as a solid unit in the union or other mass organization."

During World War II, after the break of the Hitler-Stalin pact, when Russia and the United States were allied in the war against Germany, Communist-front organizations sprang up like mushrooms all over the country. This was a harvest period for the Communist Party. The party utilized the war alliance between the Soviet Union and the United States as a means of setting up hundreds of organizations throughout the country which it controlled and which many unsuspecting persons joined in the belief that they were joining solely patriotic organizations. The Communists have an uncanny ability to name organizations which they wish to use in such a manner as to appeal to the humanitarian or patriotic instincts of unsuspecting Americans.

It is interesting to watch the Communist Party line and see how that line is followed by the party in the United States. We have but to look back to the beginning of World War II when Hitler was rising to great power in Germany and was threatening all of Europe. At that time, the Communist Party was vehement in its attack on nazism. Then with the signing of the Hitler-Stalin pact, the Communist Party overnight ceased all anti-Nazi propaganda and appealed to the American people not to become engaged in the war against Germany. Peace movements were conducted by the Communist Party in the United States. Petitions were circulated and speeches made in an effort to limit our defenses and to remain neutral during this period. Then with the breaking of the Hitler-Stalin pact, the Communist Party of the United States of America again switched overnight and became vehement in its attack against nazism and fascism. Then the clamor was for us to get into the war, open up a second front—and from that time until the end of World War II, the Communist Party aim and effort for the prosecution of the war was the same as ours. Because of that, many people were misguided in believing that the Communist Party was not only a harmless organization, but was working in the interest of America. However, at the conclusion of World War II, the Communist Party in the United States abandoned its role as peaceful cooperators with the American Government, and reverted to its true role of militant conspirators.

When this took place, many individuals who had been naively associated with many of their activities realized the Communist Party for what it was and would have nothing further to do with any organization which Communists controlled, and many organizations endeavored to ferret out Communists from their ranks. This is particularly true of many of our major labor organizations. And then came Korea. The act of aggression by the Communists of North Korea and the position of the Communist Party of the United States of America in upholding that aggression was the final blow to many mis-

guided idealists who still believed the Communist Party was nothing other than a political party. Since Korea it has been much more difficult for the Communist Party to establish its front organizations and the fractions that do exist have to work much more quietly and not as openly as before. You may be sure that today any person who is a member of the Communist Party is a hard-boiled revolutionist; shaken off the fringes of the Communist Party are the misguided idealists, the do gooders, etc.

Despite these facts, the American people are traditionally optimistic. It is most difficult for most Americans to believe that there are people in our country who would carry out the aims and objectives of the Communist Party. Therefore, the American Legion Post of Aberdeen is performing a great patriotic service in setting aside a special day to alert Americans, enunciating the advantages we Americans have and take for granted, and pointing out the real danger which is threatening that which we hold so dearly. It is inconceivable to me, despite an individual's political views, how anyone can conceive of destroying our way of life and our free economic system and supplanting it with dictator government based upon enslavement of the people.

We all admit that there are some imperfections in our own system and are conscious that with the passing of time, changes develop and we must find new methods and new solutions to our problems. This we have been able to do. This we can and will continue to do within the framework of our Constitution in keeping with our economic structure. The United States has by far the highest standard of living in the world today. The critics of the American system of government fail to point out that we have reached this attainment at the same time a great abundance of our natural resources has gone to other countries in order to raise their living standards. Many of these recipient countries are socialistic countries. Countries are no different than individuals. If we as individuals are to copy or imitate someone, we copy a person who has something better than we have. It would be folly to copy an inferior product. The same holds true with philosophies of government. It would be stupidity of the first order for us, who have maintained a high living standard, personal freedoms, a code of high moral ethics, to copy a philosophy of government enjoyed by the Soviet Union which has produced a low standard of living and where the most intimate personal freedoms are denied and moral ethics are ridiculed.

What the country needs today is not a 5-cent cigar or two cars in every garage but a rededication of ourselves to the principles embodied in true Americanism. This program here in Aberdeen is truly significant and I hope that the spirit which prevails here will so engulf the country that every loyal American will become an active participant in an American crusade to root out all forces that would destroy our heritage of freedom and that we would not be cowed and that we work with the same singleness of purpose, with the same determination as do our enemies. Let us pray to God that our children and grandchildren will never look back to our generation with scorn and brand us because of our apathy as being responsible for having squandered our sacred trust. We who believe in God must meet the danger of communism realistically. All religious creeds are ridiculed and debunked by the master minds of the Communist International. The freedom to worship God as our conscience dictates is inherent in our free society. Don't sacrifice this freedom on the atheistic altar of communism. Let's pray—let's work—let's think. A nation that is right, alerted, and prepared will never be conquered.

Five Hundredth Anniversary of the Birth of Christopher Columbus

EXTENSION OF REMARKS

OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. LATHAM. Mr. Speaker, it is eminently fitting that the five hundredth anniversary of Christopher Columbus, navigator, daring seaman, and discoverer of this great continent, be honored in 1951 with the issuance of a special stamp.

The Encyclopedia Americana lists the year 1451 as the year in which Columbus was born in Genoa, Italy, and in New York State, and in many other States in the Union, October 12 has been set aside as Columbus Day for the purpose of doing honor to the memory of this intrepid Italian explorer.

Columbus, in discovering this new continent, opened up vast new lands which became the haven of millions. He raised the sights of mankind to new fields and valleys extending far across the sea. It is vital, then, that his services to the world and to humanity be commemorated anew in tribute to him as a navigator and benefactor.

American citizens of Italian descent who came to this great land first opened by Columbus, have rendered the Nation most valuable service in its development, in its wars, and in its arts and in the sciences. The United States owes a debt to its Americans of Italian birth and descent, just as we owe a far-reaching debt to Columbus. The Nation has been vastly benefited by arrival here of these many millions of men and women of Italian lineage. There has been a tradition of good citizenship in peace, and valor in war.

Mr. Truman Uses Taft-Hartley Act—Again

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. For "yars and yars," Mr. Truman has been waging war against the Taft-Hartley Act on two alleged grounds: First, it is no good; and second, it is unnecessary. Before the 1952 campaigns get warmed up to even a mild fever, Mr. Truman will have to discover a new reason for his opposition. Or perhaps some new brain truster will have to come up with the reason for him.

It is now at least nine times that the President has used the Taft-Hartley Act to end a work stoppage which imperils the national health and safety. You may be sure that Mr. Truman would never have used this legislation if he could possibly have avoided it. More-

over, if there were no need for the Taft-Hartley Act, you may be sure that the White House would have pointedly called our attention to other methods by which these problems could be met. In meeting the serious challenge to continued production created by the copper strike, the Taft-Hartley machinery will provide for a Federal court injunction which will compel the immediate resumption of work for at least 80 days during which negotiation to settle the issues can proceed.

We do not like to crow—much—but the Taft-Hartley Act has earned a niche in the history of conciliation in labor disputes which Mr. Truman's invective cannot dislodge.

Tactical Use Set for New Atomic Weapons of United States

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. DORN. Mr. Speaker and gentlemen of the House, the following article appeared in the New York Herald Tribune on Monday, September 10. This article was written by the aviation editor of this great paper. He was a lieutenant colonel in the Eighth Air Force in World War II and has recently returned from the Far East where he was war correspondent in Korea and Japan. Colonel Talbert has contributed much to this Nation by his writings and warnings to our people concerning the future of air war.

I have personal pride in Colonel Talbert's success in New York and elsewhere because many of his people are in the district it is my honor to represent. One of his late kinsmen represented my district in this Congress. The late Col. James Talbert served for 10 years with distinction and honor in this great body.

The article follows:

TACTICAL USE SET FOR NEW ATOMIC WEAPONS OF UNITED STATES—ALLIED PLANNERS COUNT ON THEM TO HALT RUSSIAN ATTACK DEEP IN EUROPE

(By Ansel E. Talbert)

LONDON, September 9.—America's new secret atomic weapons are definitely being counted upon by military planners for future tactical use in stopping any Russian attempt to sweep across Europe, it was learned here today.

Both American and British strategists are in complete agreement that the "Battle of Britain" must never be repeated and that a defensive fight of free nations against Communist aggression must take place deep in Europe. There the new atomic weapons would be employed in disrupting Russian communications and transport and in destroying enemy troop masses before they are set in full motion westward.

Implementation of this plan is receiving the highest priority and the United States Air Force has created a new unit known as the Mutual Defense Material Division, which is an air material command to build up logistical support necessary to accomplish the aeronautical phases of this program.

MUST WIN AIR SUPERIORITY

The primary move of course would be to capture air superiority over Europe so that tactical air and ground units employing the new weapons could carry out their missions successfully. They would be unable to do this if the power of the Soviet Air Force was not destroyed to a very large degree in the first stages of the war.

The chief British worry at present is that the build-up of combat aircraft in the United Kingdom and elsewhere is not taking place rapidly. It was with this in mind that the British recently proposed powering 500 American Sabre F-86 jet fighters with the Rolls-Royce Avon engines built here. The plan is still under consideration.

The production of the Avon, one of Britain's most powerful axial-flow jet engines, rated at a 7,200-pound thrust, is being expanded considerably at present. The Rolls-Royce Co. claims that it will soon be in the largest-scale production of any single jet engine in the world, with the British motor-car industry being called in to do the job.

The parent company is now building the Avon engine at Derby and is about to start production at two other factories in West Scotland. Two other British aircraft engine companies, Bristol and Napier, have agreed to build the powerful axial-flow engine under subcontracts. The latter concern is opening a new Lancashire factory in connection with the project.

CALL THREAT "VERY SEVERE"

The highest ranking man in the Royal Air Force and in the Air Ministry, with whom his correspondent has discussed the matter, say frankly that the air threat to Great Britain and all of free Europe for the moment, is "very severe."

They estimate that the Red air force right now is capable of delivering sustained attacks against London from its present bases, which would be heavier than any delivered throughout World War II by the German Luftwaffe. Should the Soviet Army succeed in moving westward and in capturing new bases, this threat would be even more serious, according to these strategists.

This view, incidentally, is not a personal one of the officers concerned but has the approval and agreement of Arthur Henderson, British Secretary of State for Air.

To counteract this potential Red threat the British are designing new jet fighters and bombers for production in the British aerial rearmament program scheduled to reach its peak early in 1954, and the Americans are shipping an undisclosed number of jet aircraft to the North Atlantic Treaty countries. Many will be in actual service by the end of the year.

CONTROL GROUPS SET UP

Already the Mutual Defense Material Division has begun setting up control groups overseas in friendly countries to supply necessary spare parts and maintenance equipment for the jet aircraft sent to them. By October the first huge overseas control group supply depot will be operating at Chateauroux, France, under the command of Brig. Gen. Joseph H. Hicks, of the United States Air Force. The first of several State-side transport control depots, designed for shipments of good to overseas control groups, is already in action at Newark, N. J.

Meanwhile American ground officers in Europe, assigned to serve under General of the Army Dwight D. Eisenhower, are giving the closed study to potential use of the new atomic weapons in the field. Some feel that there may be more efficient ways of delivering these weapons than by aircraft, but the value of air superiority under all circumstances is admitted.

Many of the officers studying the problem were in England during World War II and they have not forgotten that, although late

in the war German science developed flying bombs and other V-weapons capable of turning the tide, the value of these weapons was largely nullified by constant allied bombardment of the V-weapon launching sites. This activity would not have been possible without clear-cut allied air superiority.

The Federal Income Tax

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. MILLER of Nebraska. Mr. Speaker, I insert in the Appendix of the RECORD an article from the Nebraska Tax Research Institute that covers the subject of the Federal income tax. I commend the reading of this article to my colleagues. It is accurate and thought provoking.

THE FEDERAL INCOME TAX

The one thing taxwise that burns our very soul is the constant propaganda from Washington that Congress must raise the income-tax rate to siphon off surplus profits to stop inflation. It is the screwiest dilly any politician has hatched up to date, and yet we have not seen where any economist has had the courage to take exception to the idea. Actually they siphon the money away from the people who earned it and would use caution and intelligence in spending it, and throw it into a political jackpot where it is spent with the usual abandon of intoxication that so often goes with the uncontrolled spending of the other fellow's money.

Inflation is nearly 100 percent Government created. Let's examine the procedure exactly as it is:

1. Every time the Government gets into the market for services and commodities the price shoots up. The more they are in the market and the longer they stay in the market the higher the price goes.

2. Evidently very little thought is given by our friendly easy spending bureaucrats, who are charged with the responsibility as to the effect of their buying on prices of civilian goods.

3. This Government buying always starts an upward spiral of increases in wages, and thus the cost index on all services and commodities are pushed upward and inflation is turned on in a big way.

There is no better example of the utter disregard or ignorance of the facts in this matter on the part of the Government top brass than a statement made by Gen. George C. Marshall, who is presumed to represent the civilian interests in the Pentagon aggregation known as the Joint Chiefs of Staff. General Marshall, in this statement, said that inflation had cost the war effort over \$7,000,000,000 and was hampering this effort. He must surely realize that in his role as a member of the Joint Chiefs of Staff he is perhaps responsible for more of our present inflation than any other one man in the United States. He has not said a word about: (1) Careful buying, (2) that we might run out of tax money, (3) that waste of Government funds is in reality a racket for exploiters, (4) that the effect of high taxes is having a deadening effect on the growth of business, especially small business, and (5) that under the new tax rate some of our large corporations will have that part of their earnings

that are in the high bracket almost completely socialized.

INCOME TAX FURNISHES RACKET MONEY

It is well known, of course, by every thinking man in the United States that the Federal income tax is the one main supporter of all this incompetence, this useless spending, this paying two, three, or four times as much as they should for services and commodities, a situation that will surely eventually bring us disaster.

With all this common knowledge and with all the talk there is in and out of Congress about stopping inflation, what does Congress do? They increase the Federal income tax, which is the principal source of the creation of and the support of the inflation they talk about stopping.

Not only does the Federal income tax of itself create the inflation but perhaps one of its worst features is that it creates a taxing complex that is followed by State and local officials over the entire country, and thus these agencies act as an auxiliary promoter of inflation that is almost as serious as the Federal income tax itself.

Time and again we have asked top officials when this foolish Government spending with its resultant inflation is going to stop. None to date have offered a guess. Evidently they assume the inflation must go to the breaking point.

We should all ask our representatives in Congress these questions:

1. Why is it necessary for the Government to pay several times the civilian price for services and commodities?

2. Why is it necessary for the Government to buy as they so often do several times the quantity of goods needed?

3. Why is it that Government can take the manpower of the Nation in any manner they choose, but when it comes to services and supplies the Government appears to be helpless—particularly as to the prices to be paid?

4. Why can't Congress in some manner put an effective penalty on incompetence, crookedness, and waste in Government and stop it before it takes place rather than their usual procedure of a lot of useless investigations after the harm has been done.

In conclusion may we again remind our readers that inflation is never created by business. It is 100 percent a Government institution and a Government monopoly. The Government can stop it any time it wants to. When we hear of curbs for inflation we must keep in mind there is only one. Shut off a sizable percentage of the Federal income tax and don't put any other tax in its place. Get dollar value for government dollar expended and inflation will be past history in a hurry.

Grand Jury Recommends Additional Narcotic Agents

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a recommendation of the grand jury for the eastern district of Illinois concerning employment of additional agents in the Narcotic Bureau

of the Treasury Department to help combat traffic in narcotics:

RECOMMENDATION OF THE GRAND JURY FOR THE EASTERN DISTRICT OF ILLINOIS

Whereas it has come to the attention of the grand jury of the United States District Court for the Eastern District of Illinois at the September term, 1951, thereof, that the traffic in narcotics is on the increase throughout the country, particularly in the larger cities, and constitutes a threat to our country; and

Whereas it further appears that although the narcotic agents are now rendering efficient and capable service, nevertheless there are not sufficient agents in the Narcotic Bureau of the Treasury Department to control and eradicate this traffic.

Now, therefore, we, the grand jury, recommend that sufficient appropriations be made by Congress to employ additional agents in the Narcotic Bureau of the Treasury Department so that this traffic in narcotics may be controlled and eliminated;

We further recommend that a copy of this resolution be sent to the Attorney General of the United States, the Secretary of the Treasury, Commissioner of Narcotics, the Representatives in Congress from the eastern district of Illinois, and the United States Senators from Illinois.

Executed this 11th day of September A. D. 1951, by the aforesaid grand jury, by and through its foreman.

VINNIE MYERS, Foreman.

The Oatis Case

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I submit three brief articles and letters in regard to the William Oatis case:

ANDERSON, IND., September 13, 1951.
Representative JOHN BEAMER.

United States House of Representatives:
Members and officers of UAW-CIO, Local 663, Guide Lamp, Anderson, Ind., commends you for your resolution which brought about House action of break off trade relations with Czechoslovakia because of that nation's action in regard to the William Oatis case.

GEORGE D. STEWART.

UNION LEADER CORP.,
Manchester, N. H., August 23, 1951.
Congressman JOHN V. BEAMER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BEAMER: You might like to see the editorial entitled "Release Oatis," praising your stand, in today's paper. This is the largest newspaper in New Hampshire, having more circulation than all the other dailies in the State combined.

Keep up the good work!

When I was born in Washington in 1905 my father was secretary to President Theodore Roosevelt, who was my godfather. You will remember T. R.'s famous message to the Sultan of Morocco, "Perdicaris alive or Ralsull dead"! In those days, the American flag was respected!

Best wishes for success.

Very sincerely,

WILLIAM LOEB, President.

[From the Manchester (N. H.) Union Leader
of August 23, 1951]

RELEASE OATIS

Bill Oatis, the American newsmen arrested, imprisoned, and tortured by the Czech Reds on trumped-up charges of espionage, has a stalwart champion in Representative JOHN V. BEAMER, of Indiana. Mr. BEAMER talks bluntly in behalf of doing something quickly to secure Oatis' release. More than that, he backs up his words with demands for action.

The Beamer resolution would suspend commercial relations with Czechoslovakia. This is a most important step, the Congressman feels, since the balance of trade is decidedly in the puppet's favor during the past several years.

That favorable balance has been frequently commented by this newspaper's Victor Riesel. Goods made behind the iron curtain—even in Russia itself—have flooded the American market, so unpatriotic are some American businessmen, who are intent on making a profit even though the imports penalize American labor. To suspend commercial relations is to step upon the Czech pocketbook. Because the balance of trade has been so much in the satellite favor, it stands to lose a great deal. And so, too, Russia will lose the American dollars the Kremlin so eagerly garners.

Representative BEAMER has other constructive thoughts. He wants to know the ideological leanings of Ellis O. Briggs, this country's Ambassador to Czechoslovakia. Is it possible, BEAMER asks, that Ellis, who incidentally, was graduated from Dartmouth in 1921, "may have the same weak attitude that has been displayed by Dean Acheson and the State Department? If so, it would seem very important and very necessary that he either be replaced by an American who believes in America or that he be instructed to really take an active part and demand, instead of beg, to see Oatis. Other requests must be equally firm."

BEAMER then stresses that fundamental principles are involved in the Oatis case. Freedom of the press and speech and the right to a fair trial (which of course was denied the newsmen) are among these principles. Shall the State Department remain cowardly in the face of the truth that Oatis has been martyred only because he was exercising these basic rights?

Another great principle, to quote the Indiana Representative, is the integrity of the United States. It must be restored:

"We must maintain the honor of the United States flag and the sanctity of an American citizen no matter where he may be, and especially if he has done no wrong."

American prestige has suffered. American honor has not been maintained. Brazenly, the Reds thumb their noses at this once proud United States of America. That is the price of the State Department's cringing servility.

[From the Muncie (Ind.) Star of September 11, 1951]

BIG TALK, LITTLE ACTION

In a letter to Indiana Congressman JOHN V. BEAMER, President Truman wrote: "We are doing everything within the authority of the Executive to obtain Mr. Oatis' release." The President is not telling the whole truth.

Everything possible is not being done to release the American newspaperman from false imprisonment in a Czechoslovakian jail. The President has not cut off Czech imports to the United States. He has not ordered United States troops to blockade the Czech-German border, as Russian troops have so often done to us. He has not ordered Czech Communists in the United States to turn in their passports and go home. He has not ordered restrictions on the activities of Com-

munist newspapermen from other nations in the United States comparable to restrictions imposed on United States newspapermen in Communist countries.

Mr. Truman has told Czech Communist Ambassador Prochazka that United States relations with Czechoslovakia will not improve until Oatis is released. The ineffectiveness of this weak talk is indicated by the Ambassador's refusal to do anything about Oatis and his statement that the Oatis case is "closed." The President has not, as he has the power to do, sent Prochazka home as persona non grata, with instructions to the Czech Communists to send no more ambassadors until they send Oatis home free. Nor has he fully complied with the wishes of Congress to end all trade relations with Czechoslovakia.

Until President Truman does do "everything possible" to get Bill Oatis released, Oatis will stay in jail. Instead of trying to fool the American people with evasions and half-truths, the President should be using his immense powers to protect the rights of an American citizen falsely accused, falsely tried, and falsely imprisoned in a Communist police state.

Heart Fag

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. BECKWORTH. Mr. Speaker, I desire to include the enclosure in the CONGRESSIONAL RECORD:

HEART FAG

Hate, the poison that hurts the hater—not the hated.
Envy, the cancer that eats at heart and mind.
Arrogance, that shuts out friendship and love.
Recrimination, the useless brooding over wasted yesterdays.
Tension of nerves, that destroys personality.
Fear, that makes us cowards instead of "captains of our souls."
Anger, that makes men more like beasts than in "His image."
Greed, that chills charity and blights life's blessings.

HUBERT M. HARRISON.

(With acknowledgment to Dr. Norman Vincent Peale.)

Additional Newspapers Oppose Squandering \$19,019,000 on Grandview, Mo., Airport

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. GROSS. Mr. Speaker, I am inserting in the RECORD herewith additional editorial comment supporting my opposition to an authorization to spend \$19,019,000 of the taxpayers' money for a glorified WPA project at the Grand-

view, Mo., Airport, in the vicinity of property owned by the Truman family and political insiders—graduates of the Pendergast school of politics.

This supplements similar material which I made a part of the RECORD on August 20 and yesterday, September 13.

[From the Waverly (Iowa) Democrat]

OUR CONGRESSMAN ON THE JOB

Congressman H. R. GROSS was right in opposing the "Trumanview" airport contained in the military construction appropriation which the House voted last week. How in the world President Truman can ask for price and wage controls to fight inflation and at the same time recommend such extravagance is beyond understanding. It's plain to see that it's the old Pendergast system of getting plenty of money in circulation at election time. There must be some limit to how small our dollars can shrink. Truman seems determined to find out. If we had more men like Congressman GROSS in Washington we'd get at the real causes of inflation—projects like the "Trumanview" airport.

[From the Marshalltown (Iowa) Times-Republican]

H. R. GROSS SHOWED COURAGE

Our Third District Representative, H. R. GROSS, is to be commended for questioning the \$19,000,000 asked to improve an airfield at Grandview, Mo., in Truman's home county.

GROSS claims there are nearby airfields which could be enlarged at far less cost. The Armed Services Committee did not approve a dime, out of \$5,000,000,000, to improve Iowa airfields though Sioux City had its claim on file.

It did authorize 12 projects for Georgia, the home State of Chairman VINSON of the committee.

Probably if the administration were Republican, Iowa's solid Republican delegation in the House would fare better in the location of Government projects.

But, regardless of party, our leaders should be sufficiently cost conscious to avoid duplication or waste on expenditures to please local constituents.

There is so much political flinching and wasteful spending by this administration that taxpayers are beginning to worry about the strain which is bound to come on their take-home pay.

They should appreciate the courage shown by Representative GROSS. The loyal opposition should always be alert to see that our billions are spent with due regard for reasonable economy, and that the defense effort is not used by politicians for handing out favors to any contractor, State, or pressure group.

[From the Charles City (Iowa) Press]

GROSS INNOCENT

Representative H. R. GROSS was accused by a Texas Democrat in Congress of violating security by disclosing that an expanded airfield at Grandview, Mo., was to be used as a fighter plane base. Congressman GROSS didn't reveal anything at all but the furore his remarks caused obscured, unfortunately, the reasons why the expanded base is needed. The American people would still like to know.

[From the Winterset (Iowa) Madisonian]

TIMELY TOPICS

(By Ed. M. Smith)

H. R. GROSS, whom you used to hear over the radio, seems to be using his head, and is not afraid to stand alone, if necessary, against the majority.

Perhaps you read that the bill to build a big military installation at Grandview, Mo.,

was before Congress and the Truman cronies want it built at Grandview, President Truman's home town. This in spite of the fact that we have several unused war installations, including the one at Fort Des Moines.

GROSS asked for a roll call on the nearly \$20,000,000 Grandview project. He says: "My motion to recommit the military construction bill with instructions to strike out the \$19,019,000 Grandview, Mo., airport project received exactly 45 votes when I asked for a roll call. Only 44 of the more than 160 Republicans present, and only 1 Democrat supported it. The total of 45 was an insufficient number to compel a record vote. The entire bill, authorizing some \$6,000,000,000 of the taxpayers' money, and including the Grandview pork-barrel item, was then passed by a vote of 352 to 5. The five who voted against the bill consisted of four Republicans, including myself, and one Democrat."

Suppose you write your Congressman for a report on how he voted on the roll call.

[From the Storm Lake (Iowa) Pilot-Tribune]

GROSS WAS RIGHT

H R GROSS, formerly of radio fame and now a Member of Congress from the Third Iowa District, staged a losing battle on the floor of the House the other day. He opposed a \$19,000,000 air base in the home county of President Harry Truman. The proposed location is Grandview, Mo., near Kansas City.

GROSS contended that the expenditure of \$19,000,000 was just plain extravagance. He pointed out that the Air Force could use a nearby base at Sedalla. And that there are unused bases at Ottumwa and Sioux City that were constructed during World War II and are standing idle.

GROSS termed the Grandview expenditure as "just a glorified WPA for the Pendergast crowd." He declared he hadn't received any "satisfactory explanation as to why the bases at Ottumwa and Sioux City are not being utilized."

Well, the newspapers say all that GROSS accomplished was to delay the final vote. When the test roll call was made, he was overwhelmingly defeated.

Nevertheless, northwest Iowa, we are certain, believes he was right. Sioux City has been trying for months to get the Armed Services Committee at Washington to recognize the \$12,000,000 airport at the Woodbury County metropolis as worthy of service.

Congressman CHARLES B. HOEVEN has joined the effort to discover why the Sioux City air base is standing idle while the Air Force is spending millions for new ones. Thus far no one has been able to figure it out.

Usually the alibi is that winters in northwest Iowa make it difficult to keep an air base open during portions of severe weather. But Grandview, Mo., is in the winter belt, too, along with Kansas City. So that explanation explains nothing.

Apparently the idea is that the Air Force wishes to build new airfields regardless of whether present ones should be reactivated. Another dig into the taxpayer's sock.

Speech of Hon. Frank R. Ahlgren at Forrest City, Ark., on August 30, 1951

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. GATHINGS. Mr. Speaker, it was my distinct pleasure to be present on the

occasion of the dedication of the Hamilton Moses power generating plant at Forrest City, Ark., on August 30, 1951. The most significant high light of the day's program was the masterful address of Hon. Frank R. Ahlgren, of Memphis, Tenn. Mr. Ahlgren, who has served as editor of the South's greatest newspaper, the Commercial Appeal, for the past 14 years, was the principal speaker at the banquet sponsored by the Forrest City Chamber of Commerce. The guest speaker had just returned from an extended trip to many European countries.

Mr. Ahlgren's report on Europe, his tribute to Mr. Hamilton Moses and his learned presentation of the problems with which the South is confronted were excellent and well received by the listening audience. I commend this very fine speech to the membership of the House and the country. The full text of Mr. Ahlgren's remarks follows:

I

As I interpret my assignment tonight it is twofold: To acknowledge the enterprise of the people of Arkansas, and particularly eastern Arkansas, who have demonstrated so magnificently what unity of purpose under our free enterprise system can achieve in material advancement and to pay tribute to a man whose faith and energies have been an inspiration to all of us for so many years.

Your invitation reached me while on a busman's holiday in Europe. It came at a time when I was contemplating with some misgivings the overburdening bureaucracy and state planning with which those countries of the Old World are struggling. It served to underscore the difference between our system and theirs.

We have here a manifestation of bold, confident, self-reliant people working together, looking only to themselves and a benign providence to accomplish something in the tradition that has built this great country in contrast to the drab, timid, mildly imaginative way of life under socialism that depends on the state for virtually everything.

With your indulgence I would like to give you some of my observations on that trip as a means of emphasizing the need to keep abreast of developments. Of course, the usual question asked of anyone lately returned from there is, "Are the Russians going to attack in Europe?" I am not making any predictions. I will say, however, that the chances of Russia sending her armies into an outright offensive against us or our allies in Europe seem less likely at this time than in 1947 when last I toured Europe.

The Berlin airlift showed the Russians we would not be bluffed. Tito has led his Yugoslavs away from the Moscow-dominated Comintern. There are indications of unrest in Hungary and Bulgaria. The Communists, although still strong, have been rebuffed in French and Italian elections.

And General Eisenhower is welding a strong Atlantic pact army that will give even the arrogant Russians pause. As one observer put it, "Ike's forces, even in this formative stage, are strong enough to bloody the nose of any aggressor." The Russians are not noted for taking the initiative if they can get somebody else to stir up a ruckus and at the moment the elements of freedom and liberty are in control in those countries outside the iron curtain.

Recently discussions were held with Generalissimo Franco, the caudillo or leader of Spain, to establish American military bases in that country. Admiral Sherman, late Chief of American Naval Operations, whom I talked with in Madrid a few days before his untimely death, told me negotiations with Franco were proceeding "satisfactorily."

From conversations with others in Spain, I am inclined to the belief that Franco will make a deal with us, thereby affording a second line of defense behind the Pyrenees from which to mount a counteroffensive should the Communists attack in Europe.

Franco's new cabinet is regarded as less isolationist and therefore more friendly to the United States. He has said his selection of a cabinet had nothing to do with the pleasures of another country but the complexion of it could hardly be called inimical to this country. He hates communism. He knows the Red hordes would sweep over his domain if they took Europe. So he is with us, one way or another.

This does not please the Socialist governments of England and France. They make much over the unseemly prospect of our democracy going into a deal with a dictatorship and the effect it would have on other democracies. The real reason, of course, is that we would be spending money on installations behind their first lines of defense. And, also, that we would be spending money elsewhere than in their countries.

I was in the House of Commons in London when Foreign Secretary Morrison made his first speech on foreign policy since assuming that office. In the course of it he explained that, while the United States was not contemplating asking the inclusion of Spain in the Atlantic Defense Pact, nevertheless a treaty between America and Spain would result in advantages that would not outweigh the disadvantages.

When he was finished, the Conservative side of the House tore into him with unexpected vigor and I got the impression that at least a large section of British politics was not going to rebuke the United States or presume to tell us what treaties we could make.

During my visit in London I talked with a number of persons in rather widely diverse walks of life—servants, the inevitable taxi driver, proprietors of one of England's most authentic forums, the "pub", shopkeepers and even men and women of the rather tarnished opulence that remains—and there were very few supporters among them for the Labor government. Bernard Baruch, with whom I talked on the returning *Queen Mary*, reminded me that while the working man and woman, or the low-income group at any rate, did not apparently like the way the government was being run, they voted for it out of a sort of "sullen contentment" in the leveling-off process that is taking place in Great Britain.

Mr. Baruch, one of the few elder statesmen remaining in this country—he was Chairman of the War Industries Board in World War I and one of President Wilson's closest friends and advisors—addressed a dinner of the United Europe Committee in London. In the course of it he told European diplomats that "Unless the peoples of Europe unite and quickly give their full all-out support to General Eisenhower in his efforts to bring about a common defense, you cannot count on America's economic and military aid continuing. We will meet more than generously whatever Europeans do. If you show no hesitation and undertake your full share, we will go the limit. The burden will be less for all concerned. * * *

"We shall do more than match your efforts. But do not let Americans feel that you are not willing to shoulder your fair share of the burdens. Korea has shown that we are lacking neither in leadership nor sacrifice. But if we are to succeed you must do more there and your full share here. * * * There is no price tag on freedom. If we lose that, we lose all."

Mr. Baruch was chairman of the committee that wrote the atomic energy report which, had it been adopted by Russia, would have considerably lessened our pres-

ent difficulties. He spent some time at Versailles with General Eisenhower.

He likened General Eisenhower to Peter the Hermit, who in the eleventh century roused the first great crusade against the infidels threatening to sweep over Europe. At 81, Mr. Baruch has one of the keenest intellects it has been my good fortune to encounter and he is frequently called upon for advice by persons high in national and international affairs. And without apparent drain on his astonishing energy.

Referring to General Eisenhower he said he had never seen a man so completely devoted to his assignment. "He talks, sleeps, and breathes SHAPE (Supreme Headquarters Atlantic Pact in Europe) and is utterly devoid of political ambitions, so far as I could determine. I came away with a feeling that anybody who tried to divert his attentions to matters political was doing this country and Ike a disservice."

Be that as it may, I do not believe he would argue against the theory that if General Eisenhower were to appear at the convention of either American political party that he would get the nomination.

Ike's popularity in Europe is tremendous. Diplomats congenitally are cagey and they try to avoid enthusiastic statements. Yet one official in our Embassy in Paris countered my questions of "Are they rallying behind Ike?" with another: "Who can you name anywhere who could do the job? The people idolize him as the liberator of Europe and the politicians have great affection for him for his ability to consolidate differences. He is the one man for the job."

We were in Paris for Bastille Day—the same as our Fourth of July. France displayed units of artillery and aircraft of modern design, soldiers regaining their proud heritage. Again I called on the estimate of a man in our Embassy who served in both world wars. He had been in France since 1945. We compared notes on my visit in 1947. We were of the opinion that the French, for the first time since the debacle of 1940, were taking a pride in arms. And out of it may come—with Ike's urging—a will to fight again.

For too often in Europe you hear the expression "we don't want to fight again, we want to live."

When a German editor told me that I replied, "Well, we might as well take our people and go home." His response was immediate and characteristic, "Oh, you would not do that. The United States of America would not leave us?"

I don't believe the German editor's attitude reflects the sober thought of the people. There are leaders in most European countries who seek only to perpetuate their regimes and get what they can from us or any other source so long as they remain secure. But with the growing economic strength there comes a desire to protect it, and it is pretty well known what can be expected under the Russian regime.

The governments are selfish, of course, and they are concerned with matters that exert immediate pressure. Indicative of this was the lack of display in London newspapers of any news from the Korean front, Iran, or Persia, where the British are striving to keep their huge oil interests intact, got the greatest display. They do a pretty good job of reporting the news in their 6- and 8-page newspapers but Americans, accustomed as they are to detailed coverage of news, complain.

Europe, or that part which I saw, looked greatly improved over 1947. France and Italy were doing exceptionally well in contrast with 4 years ago. Great Britain was coming out of it in characteristic fashion—slowly but certainly—when the Labor Gov-

ernment announced another 3 years of price and profits controls which set the market off on a downward spiral.

Black markets in the countries visited—especially currency—have been overcome with adequate, if not abundant, supplies. Prices are lower than in this country but considerably advanced over recent years. Most of the best things are shipped here and we found few bargains unless you wished to trust your knowledge of art objects, which I did not.

Aboard the *Queen Mary* we held a Rotary meeting, which included some 15 Rotarians who had spent several months in Europe. They ranged from a chemical engineer from Wisconsin to a coal bunkering executive from Bombay, India, and even a pharmaceutical distributor from Manila, Philippine Islands. Each discussed his reactions. A summary was written at the conclusion which may be of interest. It reads:

"It was very encouraging to hear that, in general, the contrast found in Europe of today to that of a few years ago, showed a tremendous improvement.

"Apart from the difficulties of traveling in Russian-occupied territory, where new laws seemed to be passed overnight to the inconvenience of travelers, and intrigues of the black market in some zones, the reception was good.

"There was distressing lack of money in Spain—not in the cities of course; Madrid, for example, appeared to be building more than any other city in any country. It was gratifying to see the tangible evidence of the constructive way United States dollars were being spent, but the necessity remained that each and every traveler should regard and conduct himself as an ambassador of good will. As such, he could do much to ease the tense situations that so frequently arise.

"There was, too, the overshadowing horror of war, and some felt there were politicians who would rather remain in office than see civilization survive. But facts were more important than impressions, and the group held to the monopoly of setting the right example by introducing clear and unselfish thinking wherever any point of issue might arise."

It is good for us to visit Europe occasionally if only to understand their problems and exchange ideas. And, also, to see the exasperating lengths to which bureaucracy can take them—and us, if we don't watch it.

II

As we dedicate the magnificent utilities system that will mean so much to the future of eastern Arkansas we also honor the man who made it possible, the Honorable Hamilton Moses. I want to remind you of a few things about this remarkable man. Most of you, perhaps all of you, may already know everything that I say about him but I insist that to review the career of such a man as he, can never be superfluous. It is an inspiration to all, an incentive and a challenge to young and old.

Colter Hamilton Moses, whose full-time job seems to be finding more ways to build Arkansas, likes to call himself just a plain country lawyer.

The president of Arkansas Power & Light Co. is neither plain, nor country, nor just a lawyer. He did come from the country, having been born and educated in the little Calhoun County seat of Hampton.

He went to Arkadelphia to enter Henderson-Brown College, a Methodist academy, but found Ouachita College located closer to town. It was 3 weeks before his parents learned that he had enrolled in Ouachita.

His baccalaureate address and graduation speech at the college earned a scholarship to Tulane University. President Edwin

Booth Craighead, of Tulane, was in the audience and offered the scholarship after hearing Moses' oratory.

The master of arts degree he got at Tulane in 1909 was followed by a Bachelor of Laws degree from the University of Arkansas in 1911.

He was senior author of the Crawford and Moses Digest of the Statutes of Arkansas, known familiarly as the Laws of Moses. For long years it was the encyclopedia for lawyers and the courts of this State.

One interesting sidelight to his political career attends his association with the late Senator Joseph T. Robinson.

Mr. Moses was serving as secretary to the incumbent governor at the capitol when Mr. Robinson was elected to that office. Dismissal of Moses was reported to be the late Senator's first official act. However, when Robinson was appointed United States Senator within a short time, Mr. Moses managed the campaign of George W. Hayes and was soon private secretary to another governor. He had served earlier as secretary to Gov. George W. Donaghey, and later held the same office under Gov. Chas. H. Brough. He was assistant attorney general from 1915 to 1917, and attorney for the State corporation commission in 1919.

In 1919, he met the late Harvey C. Couch. That began a career with the power company. Later, in 1936, Senator Robinson invited Mr. Moses to become a law partner.

For 22 years, he was general counsel for the railroad, utility and industrial interests of Mr. Couch. He handled legal affairs for the Kansas City Southern and Louisiana and Arkansas Railroads. He was elected second president of Arkansas Power & Light Co. in 1941. Under his leadership, this company is spending more money for expansion than was required during all the years before 1941. The plant we saw today, significant as it is, represents only a small part of the great expansion program.

Since 1941, Mr. Moses has been the vocal, energetic president of Arkansas Economic Council-State Chamber of Commerce. He has been the central figure in the "Build Your Own Home Town" program, a joint community development effort of business and government. This movement to encourage communities to build themselves rather than rely on Federal and political direction won a gold medal in 1949 from Freedoms Foundation, Valley Forge, Pa.

III

Now, I am sure the man we seek to honor approves of the idea of my attempt to develop the theme of leadership since he has so ably demonstrated the course which that leadership can take.

Our Southland is confronted with a situation that, adequately administered, can bring her to the forefront in our western civilization. If we do not rise to that challenge we can be prepared to resume the role of what amounted to captive province economically and politically.

World War II showed the rest of the Nation—and the world for that matter—how important the South is and can be. Our climate, terrain, and transportation facilities caused the great share of military installations to be established here.

As a result, a large number of servicemen were exposed to the potentialities of this region and the evidence is on every hand that many are returning to make the South their home.

Industry, in the war-imposed decentralization program, found the South magnificently endowed for industrial pursuits. Here are the vast natural resources of oil, minerals, chemicals, wood, and fiber. The casualties among the war babies of industry in the South were surprisingly low, much lower

than in other sections for they were readily converted to peacetime purposes.

Now that we are again girding for war, the plants are here and adaptable.

The South, then, can anticipate industrial expansion. And in that expansion perhaps it can find the solution to a growing problem, the displacement of farm labor through mechanization and the increasing growth of urban populations.

The Bureau of Agricultural Economics tells us that there were 4,100,000 farm families in the South last year; that 10 years from now there will be only 2,800,000 families on farms, a drop of 30 percent. That means 1,300,000 families—and farm families are prolific—will have to find other means of livelihood.

Much of that displacement will come in the areas that concern us most, the extensive cotton portions of the South where farms have been least mechanized.

The South is now ripe for a great industrial expansion provided it has an aggressive business leadership. It has the best opportunity of its history to get an economy balanced by agriculture and industry.

Money put into factories increased from \$5,000,000,000 to more than \$10,000,000,000 during the war years, and now our factories can produce more than \$45,000,000,000 worth of goods each year. The Federal Government put more than \$4,000,000,000 into new plants during the war and was offering many of these for sale. Small locally owned companies may be formed by the hundreds to make goods in these new plants in the South.

The South for the first time has trained hands to operate the machines in these plants. Many workers learned skills in trade schools during the early days of the war and later went into factories in many parts of the country to apply their skills. Recent studies show that southern workers are as efficient as those of any other section when they have good tools and equipment with which to work. The long summer or warm period in the South permits the worker to have a garden, chickens, and a cow at little cost. Southern workers can produce as much and fare better than those of any other section. Persons with managerial know-how or who understand assembly-line techniques may also be found in the South now to operate these plants.

In 1948 the banks of the Nation increased their deposits by 6 percent, while those of the South increased theirs by 15 percent. Between 1936 and 1950 the banks of the Nation had increases of more than 181 percent, but those of the South had increases of more than 375 percent. Large businesses may still have to look to other sections for finances, but many small businesses can find adequate capital in the South.

More than three and a third billion dollars worth of minerals were mined in the South in 1948. The South produces half of the coal and electricity, 66 percent of the petroleum, and 70 percent of the natural gas of the Nation. It produces 80 percent of the cotton, more than 92 percent of the tobacco, 40 percent of the lumber, and one-third of the lime and the fruits of the country. It produces a similar proportion of many other raw materials and natural products used here or shipped abroad.

We have enough railway mileage to reach around the world four times. We have the best, coastwise and inland water transportation of any part of the country. We have 23 major airlines, and adequate bus and truck lines crisscrossing through all parts of the South. We do need an adjustment in freight rates, and it is coming soon, to encourage the shipment of finished products out of the South, so we can keep our raw materials at home and make them into goods.

Markets for billions of dollars worth of goods may be found in the South within the next few years. Half the southern population lives at a very low scale. These people need and want better homes, more and better household furnishings, clothing, food, and farm and other tools. Better wages that will come with industry will give them buying power to get the goods they want and need, and thereby will improve their standard of living. Making and distributing goods to satisfy this demand will make possible many southern factories and will give jobs to many middlemen.

Within the next 15 years from one to three million workers will be unable to eke out an existence from the cotton and corn patches of the South. This surplus population will have to migrate to another section or it will pull down farther the standard of living on Southern farms. The program of industrial expansion, though, will give jobs to these people, and will result in doing away with the colonial economy of the South. Such an economy of furnishing raw materials for others and buying back the finished products always results in a low standard of living where the standard should be high.

It was Amiel who said "He who is silent is forgotten, he who abstains is taken at his word, he who does not advance falls back; he who stops is overwhelmed, distanced, crushed; he who ceases to grow greater becomes smaller; he who leaves off, gives up; the stationary condition is the end."

And I am reminded, also, that someone has said there are two kinds of discontent in this world; the discontent that works and the discontent that wrings its hands. The first gets what it wants, and the second loses what it has. There is no cure for the first but success; and there is no cure at all for the second.

I do not wish to burden you with soporifics, but Victor Hugo was so right when he remarked that "People do not lack strength; they lack will."

The people of the South have the will; they must be given the leadership. They must have that leadership now.

We must be about the business of providing outlets for those persons to be displaced by farm mechanization. We must see to it that there are adequate financial resources available to project those enterprises that must be brought South. There must be educational facilities made available to instruct in skills and inculcate reasonableness and awareness of social and economic responsibilities.

It is currently popular to point out that there is a need for something to be worked out to solve the industrial unrest that besets our large centers of population. The strikes, the work stoppages, are a symptom of political agitation, it is true, but they are also a manifestation of the fact that the worker is not content with conditions that industrial concentration has brought.

If the South in planning and shaping the anticipated industrial spread to our area, will keep that lesson in mind I believe we can establish a pattern of small but efficient plants close by moderate-sized communities where agriculture still flourishes and where "living for worker and family can have decency and dignity."

We must guard against trying to assimilate factories on a basis that would amount to exploitation of the workers. Sweatshops are not good in any community, large or small. On the other hand, the opportunities should be there for those who still adhere to the belief of "an honest day's work for an honest day's pay."

Our natural resources should be protected from a ruthless colonial system—our mines,

our forests, and the oil and sulfur from our ground should not be squandered. It is well to create conditions inducing exploration and development but there should be severance taxes and regulations to finance institutions for the people and prevent prodigality.

For all too long, now, the rest of the Nation has looked down their noses at the South's educational facilities. Our teachers are underpaid, by comparison with other sections, and our buildings and equipment, for the most part, are in the lower brackets.

It is not sufficient to recount the economic and racial burdens, to talk of injustice and wish for assistance from other sources. It is time we turned to and reestablished a flourishing educational system second to none. We can do it, and the need is there as never before if we are to fashion the coming era into one of progress and prosperity.

The eminent educator, George Peabody, defined education thus: "A debt due from present to future generations."

I don't regard it as a debt. Education, to me, is an immediate opportunity that must not be permitted to slip by lest we lose the enjoyment of the new experiences it unfolds. We owe it to ourselves, as well as future generations.

Those misguided and not always well-intentioned persons from other sections who seem to be ever ready with a glib answer for the South's problems, arouse our antagonism with their outcries against what they call "white supremacy in the South." Well might we rebuke them with Whittier's lines. "Search thine own heart; what paineth thee in others in thyself may be."

And we know that only when our racial minority has achieved the ability to rationalize, has the awareness of social and economic problems and reasonableness, can leadership be shared. I am not arguing the superiority of one color over another. Undoubtedly the time will come when the majority of our colored brethren will have achieved that status where both races can dwell side by side with equality of opportunity and responsibility, but that time will arrive only when education has made it possible.

The South's economic level can only rise in ratio to the building up of the group at the bottom of the ladder. If but for selfish reasons, then, we must give them the opportunity to raise that level and help them with the doing thereof. One thing our critics, universally, seem to overlook is that increased economic and political advantages should mean increased responsibility for those enjoying them. They must demonstrate a capacity for that responsibility.

Yes, the South must improve its educational system. I am no pedagogue, but I regard education as one of the first problems to which we must turn our efforts. And the South must have courageous, competent leadership.

It is human to extol the giants of another era for they assume increasing stature with the passing years, but the land that produced Thomas Jefferson, the Jacksons—Andrew and Stonewall—John C. Calhoun, Jefferson Davis, Robert E. Lee, Alexander Stephens, Albert Pike, L. Q. C. Lamar, and Hamilton Moses, has sons and daughters to catch the flaming torch.

The time is now for that leadership to assert itself, to regain for the South the place of eminence that is its heritage. If we falter now, in the face of great opportunity and, conversely, the threat that agricultural displacement poses, then well may we be damned by the succeeding generations whose birthright we will have forfeited through lack of courage and vision.

Program of Exchange of Students

EXTENSION OF REMARKS
OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to insert in the CONGRESSIONAL RECORD the editorial from the New York Times of Wednesday, September 5, headed "Defeating our purpose." This editorial tells of our excellent program of exchange of students with other countries, and points up a flaw in that program which is, of course, a flaw in the fabric of our democracy here in the United States. The flaw is our racial prejudice and discrimination. This flaw is a major weapon of the U. S. S. R. in its big propaganda arsenal geared for our destruction. A part of the problem of our own information program overseas is to show that we are making steady and constant progress in this difficult and troublesome area. We in Congress can share the hope of the editorial writer of the Times that these 53 visiting students will have discovered "that segregation is fighting a losing battle" and will realize that that battle has proved a slow and tough one.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFEATING OUR PURPOSE

A group of 53 foreign-exchange students who had been brought to the United States to study during the coming year were about to climax an orientation course at Indiana University with a trip to the TVA. Fifty-one of the students were white and two were dark-skinned Panamanians. When it developed that the two could not stay at the same hotel in Knoxville as the 51 because of racial segregation in the capital of the TVA, the 51 refused to make the trip. Net result, 53 foreign students will fail to see one of this Nation's most impressive achievements; the rigidity of racial segregation in the United States will have been sharply demonstrated to 53 inquiring minds; and 53 youngsters who might even yet be enthusiastic friends of America in the 17 countries to which they will return have been given a bad taste which it will be difficult if not impossible to eradicate.

The student-exchange program can be one of the most effective means of building up permanent good will between the United States and other countries. We think that Congress would make a great mistake if it drastically cut the appropriation for this purpose. Yet it cannot be denied that many dark-skinned students from Asia and Africa have had unpleasant and embittering experiences directly due to the segregation practiced in various parts of the United States. They cannot be expected to know that segregation is fighting a losing battle in this country, or to realize that that battle is necessarily a slow and tough one. While, unfortunately, we cannot wipe out segregation overnight, the responsible agencies could by careful planning and skillful guidance pretty well prevent the opportunity for embarrassing incidents from arising. It is essential that great pains be taken to do so; for every colored student who is humiliated while a guest of our country is all too likely to go home an enemy rather than a friend of the United States.

Not Inviting Nationalist China to Japan
Peace Parley Shows Weakness of
United States StandEXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

NOT INVITING NATIONALIST CHINA TO JAPAN
PEACE PARLEY SHOWS WEAKNESS OF UNITED
STATES STAND

(By Edgar Ansel Mowrer)

At San Francisco, beaten Japan, shorn of the territorial loot acquired in four wars, will be taken back into the family of nations.

The victors will be there. So will the victims. Even peoples like the Pakistani, the Indonesians, the Indochinese, who resisted Japan as nonsovereign parts of other political units, will be present and given a chance to say their say.

Japan's first victim and longest adversary, Nationalist China, will be absent and not by its own choice. On the other hand, India, Burma, and Yugoslavia have decided not to go to San Francisco.

Nationalist China will be absent because, in the interval since the end of World War II, it has lost most of its territory to a rival Chinese faction. It will be absent because the U. S. S. R. strongly supports that rival faction. It will be absent because Prime Minister Attlee of Britain yields to the pan-Asian view of India's Nehru who hates white people more than he hates Asian Communists. But above all, it will be absent because the United States chose to abandon its wartime ally and wait for the dust to settle.

Therefore, since there are two Chinas, neither was invited to San Francisco.

The final choice between these will be made by the very Japanese who lost the war. It is hard to imagine a more humiliating decision by the United States and Great Britain. But there it is.

So the man who first stood up against conquering Japan and for years stood alone, Chiang Kai-shek, will not be present.

CHIANG WILL NOT WEAKEN

Knowing the Generalissimo, I am sure he will not weaken. How could he? He is intensely Chinese. There with him on Formosa is all that remains of Chinese civilization, one of the greatest that ever has been.

Everywhere else, Communists are destroying the old Taoist-Buddhist-Confucian culture and putting in its place a Chinese version of a foreign barbarism.

Yet sometimes Chiang must ask himself just why he stood by a Western World that then so categorically refused to stand by him.

During the war, he could at any time have come to an understanding with the Japanese. They would have become the masters of China. Chiang, and not Wang Ching-wel, would have become their puppet. (Wang accurately predicted just about how the West would recompense China's sacrifice.)

As Japan's gauleiter, Chiang might not have been too happy. But if he had gone over to the Japanese in 1941, Chinese Communist resistance, always half a bluff, would have collapsed like a paper bag. Assisted by National China, the Japanese might well have made themselves invincible to outside

attack. There would have been a different world today.

CHINA WOULD BE BETTER OFF

In many ways such a world would have been unpleasant to Chiang Kai-shek. Yet the people of China would doubtless have been better off than they are now. The Japanese dearly need the Chinese, both as customers and as manpower for future adventures. They would not have destroyed the ancient glories of Chinese civilization. They would hardly have murdered one and one-half million Chinese in cold blood, as the Communists have done. Life under them would not necessarily have been so bad. The Formosans, who lived half a century under Jap rule, prefer it to rule by Chinese Communists.

Had Chiang accepted one of the many Japanese offers to collaborate, China would not have suffered the further destruction of World War II and would altogether have avoided the horrors of the subsequent civil war.

True, such a solution would not have been to the advantage of the democratic world. It might even have brought about Hitler's victory in Europe and the end of the democratic world.

Yet why—somebody at the San Francisco conference should explain—why should the Chinese people care two hoots for a democratic world that was ready to throw them to the Communists in order to appease Soviet barbarians?

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. DONDERO. Mr. Speaker, under leave granted by the House of Representatives to extend my remarks in the CONGRESSIONAL RECORD, I am including therein an editorial from the Detroit News of August 22, 1951.

While the loss in the Missouri Valley from floods was tragic and unprecedented, the loss to the people of the Great Lakes, the Middle West States, and the Nation without access to the seven seas is also tragic.

The depletion of the iron ores of this country brings a threat to our economic welfare and even the safety and security of our country.

EQUALLY CRITICAL

By dint of having had a billion-dollar flood, residents of the Missouri River Basin are assured of a beefed-up allotment by Congress for the project to harness the unpredictable waters of that stream.

Maybe it is too bad the Great Lakes-St. Lawrence Basin was so well endowed by nature with control reservoirs, in the shape of the Lakes themselves, that we never have floods here. The St. Lawrence seaway project—needing no more money than the Missouri plains and assured, moreover, of paying back every penny through ship tolls—seems incapable of enlisting Congress' interest.

Yet the losses threatened in the Great Lakes Basin, unless we finally get access via the seaway to Labrador's iron ore, are apt to be on a scale dwarfing the Missouri flood damage. The whole country and the whole world, if war and wartime ore demand

come again, will feel the loss of a major part of our national steel-manufacturing capacity.

This will not happen in a day, nor can anyone name the day when Great Lakes ore reserves at last will be gone. The threat is not so spectacular as that of a great flood. Yet it is actually a more definite threat than the improbable recurrence of a Missouri flood unequaled within 100 years.

Progress Under the Hill-Burton Hospital Construction Program

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. ELLIOTT. Mr. Speaker, the best estimates available today indicate a need for an additional 830,000 hospital beds in this country. We have 1,100,000 hospital beds. We need nearly 2,000,000. In other words the beds available represent about 54 percent of our needs.

The Hill-Burton program for hospital construction—the Hospital Survey and Construction Act, as amended—is making progress throughout the United States. One thousand six hundred projects have been approved for construction, and when completed they will add a total of 77,000 additional beds to the hospital plant of this country. Four hundred and seventy-five of these 1,600 projects have been completed; 1,000 are now under construction; 125 are still in the planning stage.

This program must go forward. One of the greatest assets of the United States is the health of its people. The construction of hospitals, health centers, and other needed facilities will bring important services to the rural people of this country both in the fields of curative and preventive medicine.

As a part of my remarks I include excerpts from an address of Dr. John W. Cronin, Chief, Division of Hospital Facilities, of the United States Health Service, styled "Planning for Hospital and Health Facilities," and recently delivered by him in Hopkinsville, Ky. I also include excerpts from an article by Dr. Cronin which appeared in a recent issue of Hospitals, the journal of the American Hospital Association:

PLANNING FOR HOSPITAL AND HEALTH FACILITIES

(Address of John W. Cronin, M. D., Chief, Division of Hospital Facilities, Public Health Service, Federal Security Agency, Washington, D. C.)

Each hour, each moment we stand on the threshold of the unknown. This statement holds true for each of us as individuals and also for all of us as a Nation. It is in times such as these that our real worth as freemen becomes manifest.

The foundation upon which all of our great progress as a Nation has been built has been our ability to plan for the future. In isolated instances the planning has been done by a single individual, but in the vast majority of times the planning has been the result of the work of many individuals, com-

petent in many skills, getting together, working together, sharing trials and tribulations, but ever pushing forward to achieve the common goal for the betterment of all. That is democracy in action.

All planning is based on recognition of need. One of the greatest needs in our whole country today is adequate health services for our people. We need to maintain and improve the quality of our health services. Equally as important we must extend the scope of these services so that they will be available to those in need of them. This is true in time of peace, but in time of potential war, hot or cold, it is imperative that the health resources of the Nation be mobilized to meet any catastrophe, great or small. Today atomic, bacteriological, radiological catastrophes are a concern of many of our communities. Those of us who deal with services to our fellow men in time of illness have an even greater duty during the preparation for the defense of our country.

It is well to take stock of some of the important aids available to the Nation in building up our health resources.

In 1946, by the action of the Seventy-ninth Congress and the President, Public Law 725 established the hospital survey and construction program. This program, known popularly as the Hill-Burton program, was designed basically to assist the States to provide needed hospital and health facilities in needy areas. These areas were primarily rural. The mechanics of this act have proven it to be one of the most soundly conceived statutes ever enacted by Congress in providing for local, State, and Federal cooperation in providing hospital services. It is administered on the State level with the local community retaining the incentive for local initiative and local operation of the completed nonprofit, nondiscriminatory, community service type of facility. An inventory and analysis by the State of the existing facilities and definition of the need for additional facilities is required before Federal funds become available on a matching basis for construction purposes.

The State establishes the percentage of Federal funds to be made available annually for each project in its borders. The total amount of Federal funds granted to the respective States is determined by a formula in the law. The controlling factors, however, are population and per capita income of the State.

In 1949 the basic law was amended to include Federal aid for research in the field of hospital services. An appropriation to implement the amendment was under consideration at the outbreak of the hostilities in Korea. With the increased demands on the distribution of our Federal funds there has been no appropriation made available for this type of research.

As of July 31, 1951, a total of \$467,500,000 has been appropriated for hospital and health center construction. This has made possible the approval of 1,600 projects which will provide 77,000 additional hospital beds. An analysis of all the State plans shows that there are in existence today approximately 1,100,000 acceptable hospital beds and a deficit of nearly 830,000. In other words we have only about 54 percent of our needed hospital plant in this country at this time.

Of the 1,600 approved projects, 475 are completed and rendering a community service, 1,000 are under construction and 125 are still in the planning stage. Total construction costs are estimated at slightly more than \$1,200,000,000. The Federal share is about 36 percent of this amount.

Of all the projects approved, nearly three-fourths are for general hospitals. This includes new hospitals as well as additions, alterations, or remodeling of existing hospitals. Next in order are public health centers, about 15 percent; then mental hospital projects, about 5 percent; tuberculosis proj-

ects, 3 percent; with only about 1 percent for chronic disease facilities.

It is apparent that most of the emphasis has been on general hospital facilities. About 55 percent of the general hospital projects are for completely new hospitals. Most of the new hospitals are being built in small towns and in the smaller cities; nearly 61 percent of the new general hospitals are located in towns of less than 5,000 population. Only 7 percent are in cities of more than 50,000 people.

This to me points up the providential nature of the Hill-Burton program at this time. There is a duality of purpose noted. I pose the question, "Cannot these Hill-Burton hospitals be regarded as evacuation destinations for our potential target areas"? I hope we will never be called upon to put this statement to a test, but we may be. It certainly was not our original purpose.

The provision in the Hill-Burton Act for survey and planning has proved to be one of the soundest features of the law. Each community fits into a pattern of service as outlined in the State plan. The community must determine the size of the facility that can be supported and the services to be included. The local community planning features are one of the major reasons why the Public Health Service believes that a program for what we now call defense impacted areas, with increased populations, should follow the Hill-Burton concept. Service at the local level is the objective of the program for war impacted areas. Therefore, advice from the communities where the affected people live is essential. Conversely, State and Federal advice to local planning groups is important if the planning is to be really effective. Those involved at all levels should take part in it, not simply be brought into the program after the plans are made.

In addition to the Hill-Burton program, with its obvious limitations for hospital construction in war impacted areas there are several action programs designed to provide assistance.

The Federal Civil Defense Act does not contemplate the making of grants for hospital construction. It does provide for the incorporation of shelter areas or other construction designed to provide protection of the occupants against enemy attack. Funds, however, are very, very limited.

The bill sponsored by Senator MAYBANK of South Carolina and Representative SPENCE of Kentucky, known as the Defense Housing and Community Facilities and Services Act was passed by this Eighty-second Congress and signed by the President. Title III of this act relates to community facilities and resembles in some respects the Lanham Act of World War II. The provisions of this act include hospital facilities and services for the care of the sick, as well as facilities for water, sewage, sanitation and other community facilities. Federal funds in the amount of \$60,000,000 are provided for the construction, maintenance or operation of community facilities. In the case of assistance for hospital construction these funds will be available only if funds are not available under the Hill-Burton Act. This legislation also provides that maintenance and operation payments will not exceed the portion of the maintenance and operation expenses attributable to the national defense activities in the area. The act also specifies that the function, powers and duties with respect to health, refuse disposal, sewage treatment, and water purification shall be exercised by and vested in the Surgeon General of the Public Health Service. This latter proviso properly relates the health activities of those existing in regard to the Hill-Burton program. The success of this legislation depends entirely upon local, State and Federal cooperation and coordination of hospital and health services—the kind of cooperation which has proven so eminently effective to date.

[From Hospitals]

INSURANCE AGAINST CATASTROPHE

The Hill-Burton program is now completing its fifth year of operation. The local communities, the States, and the Federal Government, working closely and harmoniously together, have demonstrated that hospitals and health centers can be built in relationship to the need for better patient care. As of January 1, 1951, a total of 1,497 projects had been approved for construction; 382 were completed, and 867 were under construction. As communities which have never heretofore enjoyed adequate hospital and medical services begin to receive these services, and as other communities expand these facilities to meet their needs, the value of the extensive survey and planning carried on by the respective States becomes evident.

At a time when our national security is a matter of grave concern, it can be considered as providential that such a program as the Hill-Burton program has been in existence for even such a short period. Modern, well-equipped hospitals are being built. No better insurance against a catastrophe to the Nation's health can exist than the provision of hospitals to treat the sick and injured, to conserve the health of the worker, and to effectively utilize the time and energy of our limited number of doctors, nurses, and other health workers.

The hospital of today is the center of health for the community. It represents the mobilization depot of modern medical science to be utilized in the interest of the public.—John W. Cronin, M. D., Chief, Division of Hospital Facilities, Public Health Service.

Save the Tidelands

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Save the Tidelands," written by Harold L. Ickes, and published in the September 1951 issue of *Frontier*.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVE THE TIDELANDS

(By Harold L. Ickes)

A moral question is involved in the attempt that is once more being made to turn over to the oil interests, via the States, the immensely rich off-shore oil lands that the Supreme Court of the United States, on more than one occasion, has found never belonged to them. The States now affected, in the order of the cases that were decided against them, are California, Texas, and Louisiana. These three States, concededly in entirely good faith, for many years assumed that they had title to the so-called tidelands in which enormous oil pools have been found, and they proceeded to grant leases to explore for and capture oil, subject to a royalty to be paid to the lessor. In total, royalties that have been paid have amounted to great sums of money. Part of these profits to the States have been used for educational purposes and the rest has been expended for other State purposes.

When I became Secretary of the Interior in March of 1933, I found that my predecessors had accepted the theory that title to these off-shore oil lands belonged to the States upon which they abutted. I accepted

this policy without question, as every member of the Cabinet necessarily does with policies established by those who have preceded him, unless some reason arises which calls for a reexamination of any question. It would literally take many years for a new Secretary of the Interior to pass upon, de novo, every decision made by his predecessors.

Applicants for oil leases in these off-shore areas, on the theory that title to them was in the Federal Government, had been pressing for Federal leases in the belief, as a result of opinions rendered by their lawyers, that title in fact was in the Federal Government. Usually these applicants were turned back by the General Land Office which was the agency in Interior in charge of the leasing of oil lands on the public domain, which no one disputes belongs to the Federal Government. Finally one applicant presented his case to me personally. There was no question as to my duty to consider his case, which I did, with the result that doubt arose in my mind as to whether the decision originally made, and subsequently maintained by my predecessors, was a proper finding under the law. My conclusion was that a legal question was involved which should be decided by the courts. I did not change my mind as so many critics are fond of saying, as if for an executive officer to change his mind was an act of malfeasance. Even if I had done so I would only have been acting with due regard for my oath of office, if I had come to the conclusion that the Federal Government did have title to the property in question.

SECRETARY ICKES AND F. D. R. AGREED ON THE ISSUE

However, on the facts and arguments that were presented to me on both sides of this question, I did not feel justified in coming to a final decision. I simply took the position that, as between the United States and the several States affected, I did not know which held title and that this doubt on my part as the Federal officer having the responsibility for a final determination, should be resolved by the Federal courts. I stated the problem to President Roosevelt and he agreed with me that this was a question for the courts. He, too, was a lawyer by profession, as I am. He, too, as the Chief Executive Officer of the Nation, believed that if we had not been following the law we should find out what the law was and amend our course of action accordingly. So far as I knew, he had no interest in any oil property and therefore was without the prejudice that a man interested in gaining profits from such an investment would have. I was in the same situation. It meant absolutely nothing to me whether, so far as oil lands off-shore the coast of California, for instance, belonged to California or to the Federal Government. But it was my concern to see to it that the United States was not carelessly, and in violation of the law which all of us had taken an oath to uphold and defend, permitting any trespass upon the property or in violation of any of the rights of the United States which was precisely what had been happening, according to the three subsequent decisions by the United States Supreme Court.

It was the Supreme Court that held that paramount rights and interests in these off-shore oil lands belong to the United States, and therefore to all of the people of the United States. I never made any such decision, although I have applauded it. I might have made such a decision, subject to a possible overruling by the courts, but it seemed to me that the orderly procedure was, first to find out the answer from the courts and then to abide by that answer as it was my duty to do unless I cared so to conduct myself as properly to be subject to impeachment for misfeasance in office. But to listen to the uninformed, as well as misinformed,

clamor that is being indulged in in the tideland States, and even from inland States that not even remotely have an interest in tidelands, one might suppose that I was a wrongdoer to be vituperated and excoriated, not for violating my oath of office, but for insisting upon living up to it.

The moral question involved in this issue, stated as simply as possible, is: Is California or Louisiana or Texas justified in holding onto property as to which they have been trespassers, even if in good faith, after the Supreme Court has said that the property is not theirs? Another question is involved which is of the highest political importance. It is: To satisfy the greed of gluttonous and obese oil interests shall we encourage, let alone permit, the Congress of the United States, in effect, to overrule a carefully considered opinion of the Supreme Court of the United States, thus doing a grave hurt, not only to the Court itself, but to our institutions, that it will take more than time to heal? Are we to stand before the world, not as a united nation defending our time-honored institutions, of which we so loudly boast, or are we to present an appearance of disunity and factionalism such as we did on the slavery question which required a civil war to settle? Is the law supreme in this country or, after it has been written by the Supreme Court, are we to tear it up and cast the shreds of paper to any fitful wind which may blow? Is there anything to the American political ideal, as we have vaunted, when the dollar, even though it is depreciated, tempts our greed? Just how patriotic are the oil interests of California, Louisiana, and Texas when it comes to accepting gracefully decisions of the Supreme Court that will put them on a basis of equality with other States instead of at an unfair advantage? Here are questions which we must answer now in the field of politics or with which we must trouble our conscience hereafter.

DISTORTION OF THE FACTS IS CHARGED BY ICKES

There has been going on in the halls of Congress, in both branches, one of the dirtiest fights on this tidelands issue that I have ever witnessed and I have been a close observer of Government during an entire adult life which has already stretched into many years. I have followed the arguments indulged in by such men as Senator TOM CONNALLY of Texas, as well as Representatives WALTER of Pennsylvania and BOYKIN of Alabama. If one did not know what the facts actually are, one would be justified in believing, from what these and others have said in and out of Congress, that the real purpose behind the Walter bill (H. R. 4484) is not to get control of the offshore oil lands from the United States "under false pretenses" in order to make them more accessible on more satisfactory terms to the oil interests—no indeed. The patriotic and unselfish motive is to prevent the rapacious Federal Government from absconding with all of the inland waterways, especially those within the boundaries of those States that are without access to the two oceans and the Gulf of Mexico which, with Mexico and Canada, constitute our outer borders.

The incredible Association of State Attorneys General, generously financed, it is believed, by the oil interests, has also thrown itself into this fight for this lofty reason. Moreover, Senator TOM CONNALLY and others are all excited by the thought of Federal ownership of offshore oil lands because this would tend toward socialism. Texas and Louisiana and California may be given title to offshore mineral oil lands to lease to private interests, but there apparently would be no danger of socialism in such cases. Socialism rears its ugly head only when the United States takes possession of property which belongs to it and grants leases to explore for oil or other minerals. It is interesting that, although the United States for many years has been granting oil and other

mineral leases on the public domain, the argument of socialism has never been heard against such a proper exercise of sovereign power, particularly by the oil interests which have obtained many such leases and have grown rich under the generous patronage and protection of the Federal Government.

The argument for raping the tidelands for the advantage of the oil interests is based upon a tissue of lies—no other word is apt enough to describe the situation. The fact is that the Federal Government has frequently and publicly disclaimed any idea of exercising any jurisdiction over the inland waterways, to say nothing of claiming title to any of them. This is a matter of record so clear and explicit that Senator JOSEPH O'MAHONEY of Wyoming, a short time ago, on the floor of the Senate felt called upon to try again to set the record straight, so far as inland waterways are concerned. But the light-fingered who are out to pick the pockets of Uncle Sam of these off-shore oil lands do not wish to have the record set straight. They persist in their defamatory and untruthful statements to that degree that one is tempted to suggest the revival of the Ananias Club made famous by the late Theodore Roosevelt, so that all of the irresponsible gentry who keep repeating what they must know to be a lie, can become honorary members.

INLAND WATERWAYS ARE NOT IN DANGER OF SEIZURE

There is a conclusive counter to this "Goebbelsism" to the effect that inland waterways are in danger of seizure by the Federal Government under the doctrine of the tidelands decisions. Representative MANSFIELD offered an amendment to assure this when the Walter bill was before the House of Representatives. This amendment was overwhelmingly defeated by Representatives who, at the same time, bitterly complained that the waterways of their states were endangered. Moreover, the administration has caused bills to the same effect to be introduced during the last several Congresses. These have been defeated when they would have been passed overwhelmingly if supported by the Senators and Representatives who are so willing to serve the oil interests. Nor were they supported by the lobbying State attorneys general, who either do not know what the law is or are willing to misrepresent it, for purposes that will not bear the light of day.

The fact is that the oil interests and the lawyer-like State attorneys general, whose unprofessional conduct would have been investigated long ago by the American Bar Association if it had been doing its duty, do not want any bill to pass that would be declaratory of title in the States to their inland waterways. Despite their professional deviation, they must know that such a law is unnecessary, but the dead horse danger to the inland waterways gives them something to flagellate in order to befuddle the people and distract their attention from the real issue which is a conspiratorial attempt to put over the biggest steal in the history of the world for the enrichment of people already too rich and to the unjust deprivation of the people of those States that do not have any off-shore oil lands.

PROFITS SHOULD BE DIVIDED AMONG ALL THE STATES

Those who are opposed to the Walter bill and similar legislation have proposed that the profits from the Federally owned oil lands be apportioned among all the States on a fair pro rata basis for the benefit of education the facilities for which, in almost every part of the United States, have been rapidly deteriorating of late years for lack of money to support them. The schools need money to repair old, and buy new equipment; we need to maintain our school buildings and add substantially to what we now have; we need higher pay to hold onto the teachers

who are leaving the schools by the thousands as well as to attract new teachers. All of these things we need if we are to provide the rapidly growing army of children of school age with education, lacking which we can hardly expect them to qualify for useful citizenship. And yet a disgracefully large number of the Members of Congress would deny the children of America the educational opportunities to which they are entitled by handing over to the Standard Oil and other interests lands that are estimated to be worth literally hundreds of billions of dollars.

This new national domain constitutes the greatest source of possible new national income since the Louisiana Purchase. If wisely and prudently administered it is capable of supplying substantial financial support to the schools for many years to come. We must either allow our schools to deteriorate further, add to our already vexatious burden of taxation, or use the revenues from this oil that belongs to the Nation if we are even to attempt to educate our children for an intelligent citizenship. Yet it is apparently the intention of such men as Representative WALTER and Senator CONNALLY to turn this enormous national wealth over to greedy oil interests while adorning the education that used to be the richest heritage of our children "to go hang." When the story of this brazen betrayal by a Congress that is supposed to represent the people against the avaricious comes to be written, those who would pick the pockets of the people in order to gratify the cupidity of the oil aristocracy will richly earn their page of infamy.

Know Your Waterways—Constructive Tax Dollars

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD I wish to include an article by the Marine News, of New York, published recently in the Washington Post, as follows:

KNOW YOUR WATERWAYS—CONSTRUCTIVE TAX DOLLARS

Central government help for certain general-welfare purposes has been in practice since medieval times. It began in America with the birth of the Nation. Taxpayers have contributed, directly and indirectly, to wagon trails, canals, harbors, river and channel improvements, railways and highways. Certain industries are helped through protective tariffs. Aviation for economic and defensive purposes is aided. Science is helped in research and investigation. Magazines, newspapers, and other publications are helped through low mailing costs. The shipping industry is subsidized; how could it operate otherwise with American seamen the highest paid in all the world.

One of the underlying purposes of Government aid is to encourage, protect, and strengthen certain activities essential to national welfare, to guard against national disaster through the collapse of those vital activities.

Nation-wide harbor and channel development and maintenance, wholly unsuited for private capital, is an undeniable and imperative duty of the Federal Government: In

view of the world situation, these transportation facilities and indispensable aids to shipbuilding, both vital to defense, are becoming more and more valuable to the Nation.

Acheson's Triumph Over the Russians

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a most interesting column by Thomas L. Stokes, entitled "Danger in Goaded the Russians." Here is a thesis of great importance by a most talented observer and writer, a thesis receiving all too little thought and attention by some of our colleagues in the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DANGER IN GOADING THE RUSSIANS—DICTATORSHIP REGIME, PLAGUED BY FEARS, IS INCLINED TO MOVE QUICKLY INTO WAR TO SAVE ITSELF AND JUSTIFY ITS ACTIONS

(By Thomas L. Stokes)

One can hardly imagine our immaculate Secretary of State, Dean Acheson, in the role of the battered prize fighter in gaudy purple trunks, perspiration streaming down his chest, who breathlessly bawls into the microphone:

"Hello, Mom, I whupped him like I said I would. He never put a glove to me."

Yet, in the huzzas and hosannahs going up now from his former critics for his performance at San Francisco, there is the primitive vengeful note reminiscent of the prize ring. From the tenor of the shouting one might suspect that their changed attitude toward the once much-belabored Secretary is chiefly because he handcuffed—as we say—Andrei Gromyko and his stooges at the recent Japanese peace treaty conference.

In short, he "whupped" the Russians, single-handed—and that makes everything all right now. Come home, sir, all is forgiven.

The Secretary deserves better than that, though he deserves all the plaudits and encomiums for his brilliant success.

At the lower level of practical domestic politics, where he has been so unmercifully mauled, it was a political victory both for Dean Acheson and the Truman administration. The opportunity for him to achieve that, by putting him forward as chairman of the conference, was nicely arranged and with the assistance and cooperation of a Republican, John Foster Dulles, who worked so long and faithfully to bring the Japanese peace treaty to its conclusion. Mr. Acheson fulfilled that opportunity, bringing new prestige to himself and his country, as anybody who knows his ability could have forecast.

His effectiveness is diminished none by the fact that the Russians at this conference turned out to be what is known in prize ring parlance as a "set-up," for they revealed at San Francisco no ingenuity or change of pace, using the old and familiar blocking routines, and very stumbingly. Or, as one diplomat put it, their performance was stereotyped and sterile.

The Secretary's real achievement at the conference, in the higher levels of inter-

national diplomacy, was not in his personal handling of the meeting, but in the solidarity demonstrated in the free world. And that was not something that just happened suddenly at San Francisco, but something that represented long and slow and careful work that he has been directing all the while his now freshly converted critics were condemning him. It was that which had handcuffed the Russians long in advance of the San Francisco meeting.

So the hurrahs of the Johnny-come-late-leys has a hollow ring, and is, too, somewhat disturbing. It puts too much stress merely on beating the Russians, on "One-Round Hogan" type of knock-outs, and what we are trying to do in the world is much more than that, and may take many rounds of diplomatic maneuvering. This is not a prize fight, a bull fight, or a bar-room brawl. Much more is at stake.

It would be too bad, also, if in the exaltation of success at San Francisco the administration and the State Department would accept the rating of the now converted critics. It might prove tempting after so much abuse. Already it has been evident that the previous yammering and hammering by the critics, including the sinister manifestations of McCarthyism, have affected the administration and the State Department to perhaps an overemphasis on anti-Sovietism and an underemphasis on pro-free-wordism, negative rather than positive.

This is pointed up by one intuitive and astute observer of the San Francisco proceedings by a little venture into dialectics—to wit, the more success, the more danger. That is, there is danger in merely goading the Russians; for a dictatorship regime, plagued naturally by fears and uncertainty as it is, is inclined to move quickly into extremes, including war, to save itself and justify itself. By its very nature it can do that, since it lacks the restraints from its people that a free nation has.

We are strong, and we need to keep our heads.

We don't need to ape the tactics of a prize ring bully, which are those of the Kremlin.

Acheson's Triumph

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Acheson's Triumph," from the Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACHESON'S TRIUMPH

Senator KNOWLAND's tribute to Dean Acheson, and the spontaneous applause with which the Secretary of State was greeted upon his return to Washington, must have echoed what many Americans were thinking about the conduct of the San Francisco Conference. Despite the somewhat sticky situation into which the State Department had maneuvered itself on the procedure for approval of the Japanese peace treaty, Mr. Acheson handled the meeting with great skill and aplomb. His firm and unruffled performance as presiding officer of the conference brought not only the admiration of the non-Communist delegates but also an acknowledgment by his political opponents.

The State Department's pressure upon the American Telephone & Telegraph Co. to complete the coast-to-coast television network in time for the conference may prove to have been one of the smartest moves the Department could have made. Millions of Americans saw the proceedings with their own eyes. They saw in action the man traduced as being "soft" toward the Communists, and what they saw eloquently refuted the accusation. In this newspaper's view, "softness" in dealing with Moscow has never been one of Mr. Acheson's failings. We are happy to join with others in congratulating Secretary Acheson on a job well done.

The Murder of a Candidate

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, September 13, 1951

Mr. MUNDT. Mr. President, on Tuesday of this week, my friend Donald R. Richberg, former Administrator of the NRA and presently a member of the law faculty of the University of Virginia, delivered a memorable and prophetic address in New Haven, Conn. In this address Donald Richberg offers a candid and courageous analysis of the American political and economic scene and the issues which lie before the American electorate in 1952.

In addition, Mr. Richberg suggests practical steps which patriotic citizens who place principle above partisanship and country above political creed must take if we are to preserve here a way of life that has made our country great and kept it strong. In my opinion, this is an address which should be read and studied carefully by every citizen desiring to have a part in conserving at home the blessings of individual liberty which we are now sacrificing so much to protect abroad. I am asking that Donald Richberg's entire address appear in the Appendix of the RECORD. It is a clear outline of what we have a right to expect in any Presidential candidate in 1952 whose victory will contribute to standards and concepts which are fundamentally American.

I have been informed by the Public Printer that the manuscript is estimated to make three and one-fourth pages of the RECORD, at a cost of \$273.34.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MURDER OF A CANDIDATE

(Address by Donald R. Richberg at annual meeting of the Manufacturers Association of Connecticut, at New Haven, Conn., September 11, 1951)

It is my happy expectation that this speech will somewhere offend everyone. This is because I propose to discuss the greatest weakness and danger of our democratic form of government. That weakness and danger is shown in our universal habit of murdering all candidates for high public office. This is done, not by the comparatively humane destruction of the body, but by a continual battering of the mind which leaves the candidate apparently alive but actually a mental

ghost devoid of those courageous convictions which would make him capable and worthy of great leadership.

This murderous political custom might be discussed in generalities without offending anyone. But on the eve of a Presidential campaign, I feel impelled to speak plainly and intolerantly about what each and every one of us is going to do to destroy the particular candidate whom he would like to see become President of the United States. Such a brutal, nonpartisan exposé is certain to offend not only all the candidates but all the voters who are sufficiently earnest citizens to have a candidate and to want to see their favorite elected President.

In order, however, to have my candid comments understood as a criticism of ourselves as citizens and not as personal attacks upon the individuals whom we develop and then destroy as our leaders, I shall only identify the candidates as types. There will be for example the governor, the Senator, the general, the socializer, and the economizer. There are so many potential candidates of each type that the discussion of a typical candidate need not be regarded as the criticism of any particular person.

The first demand upon every candidate is that he shall be a miracle worker; and if he is not willing to promise this he might as well not run for office. Of course no one expects him to achieve all his promised miracles, but each voter must be made to feel that the promise in which he is most interested will be fulfilled.

In foreign affairs the President must promise to lead us toward world government with a peaceful sharing of earth's resources by all nations; and yet promise to preserve a free, independent United States with the highest standard of living on earth.

In domestic affairs the President must promise to lead us into social security for everyone regardless of his contribution to social welfare; and yet promise to preserve the freedom of private enterprise and the incentives of self-advancement.

He must promise high prices to the farmers, high wages to industrial workers, and low prices to both as consumers, so that everyone can sell his labor high and buy the products of labor low. A favorite device to accomplish that miracle is to increase taxes so that the Government can pay the high prices that no one else can afford to pay and the private citizen will not have enough money to buy the things he can't afford to buy.

The President must promise to prevent inflation; and yet promise to print and spend more and more Government money, which is the irresistible cause of inflation.

The President must denounce all large-profit makers as selfish exploiters of the workers and consumers; and yet make sure that this profit making continues so that the Government can collect billions of dollars from those taxpayers who are a voting minority.

The President must attack vigorously all business monopolies because they restrain competition and raise prices; and at the same time he must support enthusiastically the labor-union monopolies which are the most powerful organizations to restrain competition and to raise prices that we have ever known.

In a word, the President must be a cynical deceiver of the masses of the voters, or else he must be a self-deceived, wishful thinker who has so little understanding of economic laws that he believes they can be nullified by legislative acts. Strange to say there are thousands of men who laugh at the story of King Canute commanding the ocean tides to recede, who will solemnly advocate the use of an act of Congress to reverse irresistible economic tides. There are even sycophant economists who will tell

President Canute that the way to prosperity lies in spending more than your income.

Many years ago (when I first addressed this association) I was rather notoriously a member of the national administration. You may recall that we were engaged then in a tremendous effort to raise prices. It seemed to be a good thing to do when depression prices and depression wages permeated our industries like a stifling fog. In retrospect I can only explain, as did the man who threw a champagne bottle into the chandelier, that it seemed to be a good thing to do at that time.

But, defensively, let me point out that in the NRA at least we were openly trying to raise prices and wages. With a similar intent, the President increased the price of gold and devalued the dollar. Later when the Government was spending billions in preparing for and then in fighting the Second World War, not even the wooziest economist of the lunatic fringe of that administration was encouraged to announce that by spending more and more money it was fighting inflation. Inflation was inevitable. An honest defense was that inflation could not be avoided. An honest promise had to be that it would be restrained as far as possible.

Likewise today the people should be told that the winning of the undeclared, but desperately dangerous, war in which we are now engaged, with its necessarily vast expenditures, must bring more inflation. They should be told that to ward off disaster there must be an end of luxurious government, a curtailment of political philanthropy, a pause in calf-killing for prodigal sons and daughters, and the actual sacrifice by all Americans of a substantial portion of their previous standard of living.

To promise today to any segment of the American people an advance in their standard of living while proposing to arm the Nation and prepare for the costliest war ever waged, is either supreme folly or sheer hypocrisy. Any intelligent and honest leadership would be forced to tell the American people that the time for austerity has come to us. If we are not to shed more blood, at least there must be more sweat and tears for all of us. In the face of the greatest national insecurity which this generation has ever known, political promises of more social security and an ever rising and spreading prosperity, sound like the chattering of happy imbeciles or the bombast of conscienceless demagogues.

What should the people be told by the candidates for the Presidency in 1952 who have enough brains, enough honesty and enough courage to be worthy of that high office? They should be offered a program that might make sense—not one that is plainly nonsensical.

If the candidate does not believe in the imminence and gravity of the menace of war—he can candidly and courageously advocate a great reduction in military expenditures. If he is also a socializer and Federal spender, he can promise to keep on taxing people to the limit so that the Government can spend all their surplus funds for them. If, on the other hand, he believes in individual liberty and local self-government, he can promise to present something like a pre-world war budget to the next Congress plus only a few billions to service and gradually reduce the national debt.

If a candidate believes that adequate preparation to fight a third world war is the only way, either to prevent the war or to win it if it be forced upon us, then he cannot honestly and courageously offer any program except that of a reduced standard of living and an equality of sacrifice for Americans as long as we must make and maintain our Nation as one impregnable fortress of freedom in a world menaced by tyranny on the march to conquest.

If a candidate believes that we must not only prepare to defend our own land, but

must also aid remote, potential allies to defend themselves, he should honestly and courageously estimate the ultimate cost of that aid in dollars and men dedicated to foreign service. He cannot honorably ease the American people through small initial contributions into an ever rising scale of enormous spending abroad that will mean a steadily falling standard of living at home.

If a candidate believes in world government he should honestly and courageously tell the people that world government means the gradual destruction of self-government in the United States, just as the centralization of government in Washington has meant the gradual destruction of local self-government in the separate States.

These are a few examples of what the people should be told by a candidate. But, what will the governor, the Senator, the general, the socializer, or the economizer actually tell them? Any one of these may start out boldly, seeking to gain a following by showing a masterful will to win nobly by a bold disregard for cautious advice and time-serving tactics. To use a homely metaphor the candidate may stride to the plate swinging a heavy bat and determined to bang out a home run. But his manager will whisper to him: "You can't risk flying out. You're a good bunter and a fast runner, so just bunt and scuttle for first base. Watch for a chance to steal second. With good luck you can be sacrificed to third. Then you can come home on a long fly or a slow grounder. You may not be a hero, but you must get home. That's the way we win this game."

There is the keynote of the campaign: "to win the game." The candidate must play to win the game. The rabid partisans in the bleachers want their team to win the game. There is little glory in defeat and the spoils of office go to the winner. No candidate is free to run his own race for himself—to a deserved victory or a noble defeat. He is running for the party. And what is the party?

The party today is a conglomeration of discordant pressure groups. It is for everything that will bring large blocks of votes and against nothing that is popular. So far as it is possible to straddle the issues, that strategy must be followed, because both major parties are straddling parties. Just take a look at them as they are.

The Democratic Party must gather in the votes of conservative States' righters in the South, radical socializers in the industrial sections of the North and Midwest, individualistic farmers from Maine to the Rockies, and reformers of all varieties from mild to wild-eyed along the Pacific coast. It must use the corrupt big-city alliances between professional criminals and local politicians to raise campaign funds and herd voters to the polls. It must crusade occasionally against some of these odiferous allies, and sacrifice a few of them, in order to reassure a frightened or angry electorate that their Government is still a physical and moral guardian of the countryside and the respectable sections of the cities against overflows of murder, robbery, rape and other crimes from politically protected areas in which they naturally flourish.

The Republican Party must gather in the votes of conservative businessmen, both big and little, and of the members of labor organizations not yet converted to socialism by radical labor bosses. It must seek to revive the faith of individualistic farmers in themselves, and at the same time must assure them that the Government will continue to serve as the guarantor of their prosperity. It must hold itself out as more respectable than the Democratic Party in the big cities, but as sufficiently practical to get support from a lot of unpleasantly rugged characters.

The Republican Party seeks to remain the party "that freed the slaves" and to recapture its historic share of the ever-increasing

votes of the Negroes. But, contrariwise, it must recognize that it desperately needs a large share of the white votes cast in Southern States where fears of political domination by Negro voters are more disturbing today than at any time since the violent overthrow of carpet-bag government.

Is it any wonder that a Presidential candidate of either party faces the prospect of losing his own mind in striving to rally enough party votes behind him to win a national election? Is it any wonder that each party will seek frantically to find and to take the winning side of issues over foreign relations? In this way at least it may be possible to induce the voters to disregard domestic controversies, to keep them usefully confused as to what the candidate and his party intend or will be able to do to solve domestic problems, and to develop a great enthusiasm for that program of national defense and international peace which will have the strongest appeal to millions of voters who have as yet no convictions as to how our bewildering international riddles should be solved.

There is one possible escape from this prospect of unprincipled political parties and futile candidates. It would be found in the one decisive issue which would divide the voters along the line of a political principle which political leaders could honestly and courageously declare and maintain. That would not be any meaningless division into conservatives and liberals. The conservative wants all the progress that the liberal promises to achieve. The liberal wants all the enjoyments that the conservative insists should be retained. Men do not differ politically because of a different ultimate aim, because all except hopeless misanthropes want to see mankind make progress. They do differ fundamentally and always have differed on the basic question as to whether progress is most surely made by human beings in voluntary cooperation or under compulsion. The socializers turn to government as the most powerful means ever devised for compelling men to work together for a common aim. The anti-Socialists turn away from government as the most dangerous means ever devised for destroying the self-developing incentives, freedom and self-reliance, through which individuals advance themselves and humankind.

Long before socialism as we know it today was a political creed the struggle between individualists and master men was carried on in tribes, communities, and nations of slowly maturing human beings. Chiefs and patriarchs, lords and princes, hierarchies, and dynasties of kings claiming divine authority, sought in turn to rule larger and larger domains. The masses of the people were assumed to be the obedient servants of superior classes. Slave revolts, the emergence of free citizens, gave indications that below the glittering surface of society, in dark and muddy depths, were suppressed energies and ambitions struggling for release. Then when a new world was discovered, beyond once forbidding oceans, these long-submerged humans rose from ignominy, broke away from bondage to hereditary ruling classes, and began to create a new world of individualists, each man relying more and more upon himself for his own support in his pursuit of his own happiness.

Gradually came to awakening minds the greatest political discovery of all time which was that self-government is the best government to promote the progress of a people, just as self-control is the best control to insure the progress of an individual. The greatest political invention of all time was the scheme of self-government embodied in the Constitution of the United States. Our Constitution provided self-government, not because the people elected their public officials, but because their public officials were denied the power to rule their lives. They were given only limited powers to establish

and maintain an orderly conduct of citizens in their relations and associations with one another, so that in a peaceful society the people could work together voluntarily, or work separately, for their own advancement and the welfare of their associates. "The best government is the least government" was the animating spirit of the Nation created in 1787.

This Nation grew and prospered beyond all precedent in the political faith of individualism. In this faith, the American people have become the most fortunate people on earth, just because they have been the freest people. Now their faith is challenged by the fanatic revival of an old discredited faith in master men, which is given a new deceptive name: Socialism. In that faith the peoples of nation after nation have become in half a century the most unfortunate people on earth, because they have become enslaved to government monsters of their own creation.

Whether we are to follow other nations down the socialist path to degradation, down which we have been going in recent years, or whether we shall reject the leadership of the socializers and find and follow the leadership of wholehearted individualists, could be and ought to be the great issue of 1952. If that issue were made and honestly fought, 1952 would be the year of a great decision. If the issue is not made and fought we shall continue drifting down the road of degradation.

He would be a wishful thinker who thought that any normal candidate of either of the two major parties is likely to lead or could lead his party into battle on that issue. There is only one faint hope that the great issue may be made and fought. That hope lies in the recent efforts of a few brave men in both parties to bring into the Presidential campaign that coalition of Democratic and Republican anti-Socialists which could force the Democratic and Republican Socialists to make an equally genuine coalition of candid socializers.

The notable coalition which has been operating in the present Congress is, on the surface, an alliance against Trumanism. But it has taken something deeper than mere opposition to the policies and conduct of the President to bring into voting agreement with Republican Congressmen a large number of southern Democrats with their comfortable and valuable chairmanships of influential legislative committees. Nothing less than the double pressure of their own deep convictions and the intense feelings of their constituents could bring these Democrats to join in defeating the programs of a Democratic President.

There is significance also in the fact that so many influential Republicans have been courageous enough to antagonize the fervid socializers in the powerful labor unions, the emotional welfarists and the equalitarian minority lobbies, by flatly announcing that Republicans should fight socialism, which should be recognized as simply communism watered down for popular consumption.

A recent debate between a Republican coalitionist and a Republican anticoalitionist showed how irreconcilable are the two wings of the two major parties. The coalitionist asserted that the conservatives of the North and the South should vote together in the Presidential election as they do now frequently in Congress. The anticoalitionist recoiled in horror from the idea of having either party become a party of principle. If the winning party really tried to carry out its program, he said, the defeated party would not accept the results of the election. There would be a civil war such as came in 1861 because the southern Democrats then expected that the northern Republicans would really try to carry out their program.

Let's not have another civil war, pleaded the anticoalitionist. Let both parties always compromise and dishonor their pledges,

let both promise honest government and neither one try to be too honest, let both promise to support the Constitution and neither one firmly support it, let both promise peace and neither keep us out of war. This anticoalitionist was, of course, a Republican socializer and, being in Congress, he evidently had a lively fear that an anti-Socialist coalition of Republicans and Democrats might beat a Socialist coalition in every part of the country except in the big city centers of industrial and social discontent, and in other localities where dependence upon a centralizing, socializing government has become a degenerative habit like taking morphine. The best hope of survival among the socializers today apparently lies in using pressure groups within both parties to advance socialistic programs gradually, but also by adroit compromising to hold them back so as not to arouse too much resistance until, bit by bit, the political morphine habit has taken hold and a majority of the people no longer care for self-respecting independence but will sell their last threadbare garments of personal freedom for those soothing promises of security.

Compromising is what appeals to all party managers and regular candidates as the ultimate in political wisdom. A halfway reform encourages the reformers and mollifies their opponents. It is more difficult to retain public office after achieving a reform, which is usually disappointing, than after failing because of the alleged opposition of evil men and special interests which the politician can promise to overcome in his next term. With this pessimistic preparation for estimating the probable virtues of the party programs and leaders of 1952, it seems time for a brief review of the typical candidates, one of whom is likely to emerge as your candidate or mine.

First, let us consider the governor, who is always a safe candidate. Having been governor of a populous State, he is well trained in the political art of bold platitudes and cautious commitments. He promises the ultimate achievement, but leaves the timing and methods of performance to the hopeful imaginations of both radicals in a hurry and slow-moving conservatives. He seeks to be the darling of the independent voters who are not violently for or against anything but always looking for a happy compromise between emotional desires and reasonable fears. He will advocate reduced expenses of government and the expansion of social services, with equal fervor. He will preach local self-government and increased Federal aid and control of local projects in the same sermon. Having had no responsibility for our foreign relations, his statesmanlike, although confusing, espousal of both world government and America-first policies will not be embarrassed by any record and will simply indicate an open mind which both nationalists and internationalists can plan to occupy in the future.

The governor will be a safe candidate. He will not force the voters to decide the great issue—which should be decided in the campaign of 1952. He will not be mentally murdered by the pressure groups. He has long since become a mental ghost.

The Senator has most of the advantages of the governor as a safe candidate. He, too, is well trained in the art of appealing to the partisans on both sides of a political issue and to the bewildered voters recorded by the poll takers as having no opinion. But the Senator has had to talk and vote on foreign relations and on laws intended to centralize and socialize our internal government. He has had to reveal on many occasions whether he was still a man of strong convictions and resolute courage or whether he had succumbed to the battering of pressure groups and become a mental ghost. If he is still mentally alive, he may not be a very safe candidate because he might think that it was more important to force a decision

of the great issue of 1952 than to win the election. But nothing is more important to a party than to win the election.

We may assume that if the Senator is nominated by his party it will not be because he is expected to fight to the death for his personal convictions on the great issue, but because the party thinks he can win the election. The party managers must then believe that, under the tremendous pressures upon a candidate who understands that he must win, he will lose control of his own mind and become the sort of mental ghost that it is safe to have in the White House. Party managers do make mistakes. If the Senator is nominated, voters who believe that he thinks with them on the great issue can only hope that his mind will be able to live through the campaign.

The general is not a safe candidate. He has not been trained to adapt his thinking to the supreme need of winning an election. But he has been disciplined throughout his life to carry out the orders of his superior in command. Will he, or can he, assume the responsibility of ultimate leadership, the final determination of a political policy, the organization and direction of a political machine to carry out that policy which has the support of his inner convictions as to the government that will best serve the welfare of his fellow citizens? What are his inner convictions?

These are momentous questions. The general has the life-long habit of precise expression, careful planning and intelligible orders. He may intend to confuse and mislead the enemy but he must make his objectives and his directions clear to those who follow his leadership. The morale of his army, its will to win, must be created and maintained. In a pitched battle on the great issue of 1952 the general might be a great leader. But if the general as a candidate for President were to make himself acceptable to the unprincipled politicians of both major parties, then he should be regarded as just another political log-roller who is not even well trained for that Machiavellian occupation.

The socializer is a candidate who is swimming or floating in a political tide that has been rolling in to our shores for so many years that canny politicians have come to believe that it will never recede—or at least not in the next election, which is always their major concern. The socializer has one political remedy for every economic or social or moral problem. Pass a law to make people prosperous, or happier or more virtuous; and then tax the people and spend their money for them to achieve these desirable ends. "Let the Government do unto you what you won't do unto yourselves," is his political Golden Rule. If prices for farm products or wages for labor are too low, the Government will raise prices and wages. If the cost of living then goes higher and higher, as of course it will, and the Government can't hold it down, even by statistics, then the Government will help the farmers and the workers raise their prices and wages again. All deficits in the pocketbooks of the voters will be made up by the Government through "deficit financing." The perils of inevitable inflation will be averted by more inflation. Fortunately for the socializer, there is now always the excuse of war or the preparation for war to justify high taxes and huge expenditures of public money with which to maintain "full employment." As long as the balloon of Government spending can be kept inflated the people can enjoy "pie in the sky."

The socializer does not appeal only to the material desires of the voters. The virtue of a paternal government expands beyond merely satisfying fleshly hungers. It promises relief to the emotional discontents that have afflicted men and women ever since they were unfortunately created with differing physical and mental abilities. All the

social discontents resulting from these differences are now to be eliminated by government, which will pass laws under which there will be no champions or prize winners in sports or business—no acknowledged and rewarded superiors in any human activity, except possibly in politics. Of course, in politics a man is ostensibly engaged in serving his fellow men and a superior servant can be tolerated. Indeed, he must be tolerated just like a good cook because if you can't cook your own meals you either tolerate a masterful cook or you don't eat.

The socializer is a sure candidate in 1952, because the political problem of having government assure satisfaction of all the material needs of the people, combined with the social, moral program of depressing all human beings to a common level has an irresistible appeal. It appeals not only to all persons of limited ability but also to many fortunate, or nominally superior, persons who hate snobbery and worldly pride and believe that all men should walk humbly in the sight of the Lord.

Finally we come to the economizer. Will he make and fight the great issue? If he is only an opponent of careless spending, graft, and inefficiency the answer is an emphatic "No." The great economy issue is not whether government shall be efficient or wasteful. It is whether government shall protect or destroy a free economy. The great issue is whether government shall protect individualism—the faith of self-respecting freemen, or force upon us socialism—the creed of those who wish to become rulers of an all-powerful state, which is acceptable only to those who are willing to be their servants. The great issue lies between those who have a faith in the God who created them and made each one responsible for his own welfare and salvation, and those who preach worship of a god whom they have themselves created and named the state. This inanimate state is simply a pagan idol, an artifice of jealous, greedy theocrats who demand unending sacrifice and subservience as the price of a miserable livelihood and a worthless salvation.

The economizer may have some understanding of this issue. His hatred of waste and theft will help him to learn quickly that state socialism is simply legalized waste of individual energy and theft of individual gains. If he is more devoted to his country than to any political party he might be a good candidate, if he has the mental stamina to survive the campaign.

What is necessary today, in order to make and fight out the great issue is a frontal, all-out attack upon the whole theory that government is the fit instrument through which a people can make progress. The basic theory of socialism is that men should be compelled to do what governmental planners decide is best and right for them to do to advance themselves and their neighbors. This is the exact opposite of the theory of individual liberty and self-government. It is regrettable but necessary that government should be used to compel some men not to do what is generally accepted as intolerably wrong. But government should never make conduct legally wrong which is not commonly regarded as an intolerable interference with the freedom of others to pursue happiness individually, or in voluntary association with their fellows, in a peaceful and orderly society. To give any ruling class the power to decide what is best and right for individuals to do for the good of society is to assume that some men possess a wisdom beyond the finite power of any man. Only a fool will think that he can play God successfully.

When we permit public officials to decide how we should use our energies and spend our earnings we not only give up our self-respect and make a degrading confession of incompetence to take care of ourselves, but, as the height of folly, we assume that poli-

ticians are born with, or develop, a super-human wisdom for the management of other people's lives. For this there is no justification. National socialism offers us not only a tyrannical but also an incompetent government.

There may be little hope that the great issue will be clearly made and fought to a decision in 1952. Yet, it will underlie every domestic and international issue. We must revive our faith in individualism, not only to save ourselves from increasing dependence on our own Government but also to save ourselves and our Government from increasing dependence upon foreign governments over which our citizens can never exercise any individual control.

We gave a mighty aid to the Communists and to all socialistic governments during and after the Second World War. This they repay by fighting us, as our bitter enemies or our obstructive friends, in the bear pit of the United Nations. There our predestined functions are: To make enormous contributions to the welfare of other nations, to sacrifice for their benefit our men, our wealth, and our freedom, and to submit to all the international laws which our socialist enemies and friends can agree should be enforced against us—but not against themselves. This costly subservience to other nations is what is described in political bombast as accepting world leadership and its responsibilities.

No Presidential candidate can seriously contend that our adventure in world leadership up to date has made us more independent and self-sufficient, or more secure against either international aggression or domestic disasters. Any Presidential candidate worthy of any confidence should be aware, and should warn us, of the imminent danger that, in a reckless combination of extravagant, Quixotic adventures abroad and self-indulgence at home, we may exhaust our resources and lose control of our destiny.

If, through such warnings of his fellow citizens, a candidate should raise clearly and develop the great issue of 1952, I pray that those who see its importance give him a fair chance to fight it out free from their pressure to make himself primarily the champion of their immediate self-interest. I beg them not to take part in the slugging by all the pressure groups that seek to batter the candidate's mind into insensibility. I beg them to realize that the winning of a forthright fight against socialism will mean the winning of scores of minor struggles against socialistic projects to which they are particularly opposed.

If there should emerge in 1952 a candidate who will wholeheartedly support our constitutional form of government, and the individual liberties which are still dear to a majority of Americans, let us pray that his friends will give him a chance to arrive at the White House still mentally alive.

Hoffman Plans Global Air Program

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a column about one of our great American citizens, Mr. Paul G. Hoffman, written by the eminent journalist, Mr. Marquis Childs.

As the head of the Ford Foundation, I believe Mr. Hoffman has the most im-

portant private job and the greatest opportunity for service to his fellow man of any private citizen in the world.

There being no objection, the article was ordered to be printed in the Record, as follows:

FORD FOUNDATION HEAD

(By Marquis Childs)

HOFFMAN PLANS GLOBAL AID PROGRAM

PASADENA, CALIF.—In the last 75 years American philanthropists have given away billions of dollars for libraries, hospitals, colleges, laboratories in every part of the world. But the Ford Foundation tops them all, both in scale and in concept.

Here is an accumulation of a half-billion or more that will produce \$30,000,000 to \$40,000,000 a year, and the idea is to spend this income as intelligently as possible so that it will promote peace and freedom in a world torn by war and threatened by totalitarianism. Some of the best brains in the country have been enrolled to make sure that this vast philanthropy contributes to these ends and not, as sometimes has happened in the past, to solve one problem only to create two others.

Still another reason the Ford Foundation is unique is its director. A prescription covering what we usually think of as the highest qualities in American life would add up to someone very like Paul Hoffman.

He is a doer. He has been an important part of the motor car industry, which is the most dynamic sector of America's competitive system. He took a critical and pioneering Government assignment as head of the Economic Cooperation Administration and did a superb job.

Now he has tackled the task of making over the world with the same cheerful yet earnest conviction that has characterized him throughout his career. There is nothing in the least arrogant or presumptuous in this. He believes that mankind through faith and reason and the techniques of modern science can avert the disaster seeming to hover darkly in the air, and move eventually into an era of peace and good will.

You cannot talk with Hoffman long without catching something of this hope and enthusiasm. Recently completing a trip around the world, he talks about some of the projects being worked up for the foundation with full realization of the dire plight of a large part of the human race.

For India the plan is to start a series of demonstration farm plots in various parts of the country showing how by improving methods of cultivation only slightly and by comparatively simple means the yield per acre can be doubled. The yield today is abysmally low. Indians are to be trained to carry out this demonstration on an ever-widening scale. One or two earlier experiments have shown that the demonstration method takes hold quickly with the Indian peasant.

In Pakistan the foundation plans to start a technical high school for young men and a domestic science school for girls. The great need in that new country—the fifth largest in terms of population in the world—is for trained experts to teach thousands of teachers who will in turn help to educate the masses in the rudiments of modern living.

For the Near East, too, one aim is to coordinate the various efforts now being made by a host of experts to raise the level of agriculture. In the first instance, at least, this will be by means of the simplest steps.

On quite another line the foundation is hoping to establish a chair of philosophy at the American University in Beirut to be filled at least part of the time by Charles Malik, Ambassador of Lebanon to the United States. Malik is a distinguished philosopher and it is believed that his lectures will become a focus of understanding between the

Arab world and the West. This would be the beginning of a much-needed bridge between the two so-different societies.

These are only a few of the ideas Hoffman throws out as he talks of the role of the foundation. Of the many programs taking shape in this country, one is a series of radio programs called *The People Act*. To be given on a national network, it will tell how people themselves can solve community problems.

Hoffman has sworn that he will never take another Government job in Washington and when one sees him here on El Mirador Ranch, started by his father in 1911, one can understand why. In the big rambling ranch house with the terrace and the rose garden that looks across a tree-filled arroyo, he and his wife welcome a constant succession of guests from every corner of the globe, to say nothing of the goings and comings of the seven Hoffman children and their families. It is with this satisfying life as a base and a center that Hoffman works so perseveringly and so hopefully to spread understanding and reason. The visitor comes away feeling that the very existence of the man and what he stands for is in itself a portent of hope. It is one of those all too rare instances in which the man and the job have come together.

Experiences of a Watertown (S. Dak.) Man in Korea

EXTENSION OF REMARKS OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. CASE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Former Watertown Man Tells of Struggle in Early Korean War," by Chuck Griffith, published in the *Watertown (S. Dak.) Public Opinion* of September 10, 1951.

There being no objection, the article was ordered to be printed in the Record, as follows:

FORMER WATERTOWN MAN TELLS OF STRUGGLE IN EARLY KOREAN WAR (By Chuck Griffith)

War correspondents in the second big fracas had a habit of writing that a GI's war was only as big as the few acres of ground that surrounded him.

This was probably because, on the battlefield the most important thing to 99 percent of the men was old No. 1, the GI himself. And in a situation such as that, the GI worries about himself, tries to take care of himself, and seldom takes the "broad view" and puts himself second.

So when it comes to talking to men who have been involved in a war and had these feelings, a different version of a battle comes from every man in the fight just as the thousands of men in the battle react differently in the small sphere that makes up their particular arena of action.

Another Korean veteran told his story in Watertown this week, a story in which he was only a few miles from a marine who had recounted his experiences earlier of the bitter defeat suffered by U. N. troops in North Korea last fall and winter.

PREVIOUS CAMPAIGNS

The Army man is Warrant Officer J. G. Lester O. Lindgren, who is a former resident of the city. Lindgren is a veteran of the Second World War and saw action with the

Thirty-first Infantry Regiment at Attu, Kiska, Kwajalein, Leyte Gulf, and Okinawa. Following his discharge in January 1941, Lindgren returned to Watertown where he was employed by the Cudahy Packing Co. and the post office.

During the 3 years after the war, he helped form the local National Guard unit. In December of 1949, Lindgren reenlisted in the Regular Army with the grade of sergeant first class. He was sent to Hokkaido, one of the northern Japanese islands for occupation duty and was there when the Korean war began.

In September of 1950, Lindgren's unit was sent to make the Inchon landing. Following the attack, the unit was sent back to Pusan where it was regrouped and brought back to combat strength. In November, the unit joined other Army and Marine divisions and made a landing at Iwon, north of Wonsan in North Korea.

SURROUNDED BY CHINESE

From there, the U. N. forces struck north, arriving at the Chosen Reservoir north of Hagaru on the 27th of November. On the morning of the 28th, Lindgren, who was in one of the rear elements of the division's artillery battalions, got word that the Chinese had entered the war and had cut off the forward elements of the division. Within a few hours, the rear elements also found themselves surrounded by hordes of Chinese soldiers.

Attempts were made to send tank-supported ammunition convoys through to the cut-off artillery regiments. The Chinese had thrown up strong road blocks and these attempts were unsuccessful. The unit then fought its way to the Marine units along the reservoir where they gave artillery support with the few field pieces they had left.

Lindgren said the forward elements which had borne the brunt of the initial Chinese assault were decimated and very few men were able to get through to other American units. All weapons except those carried by hand had to be destroyed.

ESCAPE ROUTE BLOCKED

By the 4th of December, the Americans had regrouped and reorganized sufficiently to begin their break-out. The Watertown man said it took 24 hours to make the first 10 miles. The Chinese would occupy the higher ground along the escape route, construct road blocks and pour heavy automatic weapons fire into the convoy. The Americans would have to charge the high positions, drive the Chinese off the hills, and then repair the road before proceeding. Lindgren said he had been caught in several of the fire-fights at these road blocks during the escape.

"One of the worst enemies to us was the bitter cold," Lindgren said. "We were afraid to look at the thermometer many times but it did get down to 30 and 40 degrees below. Frostbite casualties were heavy but we managed to get most of the wounded evacuated."

AIR SUPPORT VITAL

The artilleryman said the Marine air groups gave excellent support during the retreat and would fly continually as long as there was enough light to see their targets. He felt that the escape would have been much more costly if air support had not been there.

Supplies had to be dropped by aircraft to the retreating column, including all gasoline, ammunition, food, clothing, and medical supplies. A few of the wounded were evacuated by air from Hagaru's improvised airstrip but all equipment which could be evacuated by air or driven out under its own power during the initial attack was lost to the enemy.

After leaving North Korea, Lindgren's unit went back into action north of Tanyang in January. The Chinese forward advance had

finally been stopped but they were still throwing heavy attacks against the U. N. line. Gen. Walton Walker was killed in a jeep accident about this time and Gen. Matthew Ridgway took over command of the troops.

ARTILLERY DUELS

"Every time after that when the Chinese hit our line, they paid heavily," Lindgren said. "Our artillery did much to stop them for the whole forward line was under heavy concentration of artillery most of the time. When these concentrations couldn't break up their attacks, mobile units would be moved in quickly to supplement the fire power. The Chinese were slaughtered then."

The warrant officer said the Chinese have fairly good artillery but massed counter-battery fire of the U. N. artillery units would keep them quiet.

Speaking of the fighting caliber of the South Koreans, he said there was only one ROK unit that proved its worth in battle. That, he said, was the ROK Capital Division. In his opinion, the other South Korean units either have too many politically appointed officers or haven't had the battle training to make them effective units. He said there were 7,000 South Koreans with his unit but they wouldn't hold the ground in the face of an attack.

COMMUNIST ATROCITIES

The Chinese, he said, are much better soldiers than the North Koreans. Lindgren remarked that he had never heard of any Chinese troops committing atrocities but it was a common occurrence for North Koreans to torture their captives.

The Korean veteran says the men in the front line believe the war should be taken to the Chinese. He says most of the men agree with General MacArthur's plan to bomb Manchurian bases and make an assault on the Chinese mainland. They feel that the Chinese can pour men into the battle indefinitely in spite of losses.

Although the men with the most service are being returned to the United States under the rotation program, Lindgren feels the United States will have an effective Army in Korea for some time to come. He says the Air Force, Navy, and Marine air attacks are keeping the Chinese from building up too much.

CONVOY SLAUGHTERED

"I saw one convoy caught in a pass during an air strike. The Chinese were slaughtered. Bodies of men and horses were stacked up all over. The Chinese have a healthy fear of our air power."

Lindgren left Korea July 5 and spent 1 month in Japan, where he received his warrant officer's grade. He was on leave for 1 month and has returned to the Sixth Division, a training unit.

Lindgren is married and has a 2½-year-old son. He plans to stay in the Army now, having served more than 8 years.

Some residents of the Belmont addition in Watertown may remember Lindgren as the boy who once delivered their Public Opinions to them. Later he worked in the mailing department of the Public Opinion as a mailing clerk. His term of employment for the newspaper was also 8 years.

America's Richest Resource

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD, an address on the subject America's Richest Resource, delivered by me at the annual meeting of the American Petroleum Association in the Hotel Traymore, Atlantic City, N. J., on Wednesday, September 2, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S RICHEST RESOURCE

I deeply appreciate the high honor of addressing the oldest trade association in the petroleum industry.

It is always an inspiration to meet with an organization of Americans who believe, as you do, in free, competitive, private enterprise as the foundation of American economic strength.

It is a pleasure to recall that your association had its origin among the independent refiners of western Pennsylvania and has always been identified with the State in which the oil industry was born.

Since its inception, 49 years ago, your organization has played an important part in the advancement of American progress. You have been leaders in the never-ending search for better products at lower prices in order to give better service to the public.

You are the rightful inheritors of a great tradition that has come down from the pioneer oil men of western Pennsylvania. They were men of courage and initiative. Their most valuable assets were hard work, self reliance and resourcefulness.

They faced difficulties that would have defeated men who lacked their energy, persistence and determination.

They struggled against hardship and discouragement. They took great risks, financial and personal. But the technical skill—the know-how—which they developed is the basis of one of the greatest and most useful industries in the world today.

The vast contribution of the petroleum industry to the betterment of the human race is one of the brightest chapters in the romance of American achievement.

It is appropriate, in meetings such as this, to consider the elements that have built the strong structure of American greatness.

It is proper that we give thought to the factors that transformed an untamed wilderness into the richest and most powerful Nation on earth.

What gave America outstanding leadership in industrial production?

What gave its workers the highest living standard in world history?

Why were the American people able to attain higher spiritual and cultural levels than any other people on earth?

Why have we accomplished so much in less than 200 years that many other nations look to the United States for assistance and support?

Is it because we had richer natural resources than other countries?

No; that is not the reason. Many other lands have greater natural resources than ours.

There is only one answer.

The unparalleled greatness of America was achieved because we possessed the richest resource bestowed by Almighty God upon mankind—freedom of the individual.

Yes, here in America we had a bountiful storehouse of natural resources—timber, oil, coal, gold, copper, iron, and all the other treasures of our mines, farms, and forests. But more precious and more productive of human progress and prosperity was that priceless resource—individual liberty.

We must remember that the early settlers in the American wilderness came here in search of freedom. They endured cruel hardship because they sought in the New World an opportunity to build a better life

for themselves and their children. They wanted freedom from the tyranny of kings, rulers, and dictators.

They did not look for an easy way of life. They did not ask for security. All they asked was opportunity.

We must remember also that American independence was established by men who loved liberty above life itself.

The Declaration of Independence was a protest against unjust taxation, and political interference with the rights of freemen.

The founders of our Republic did not guarantee the rights we enjoy as Americans. They considered these rights—freedom of religion, freedom of speech and the press, freedom from unlawful search and seizure, and freedom to possess property—as God-given rights.

In framing the Constitution they sought to protect these rights from the one danger that had destroyed freedom in the past.

That one danger was an all-powerful centralized government. They knew that government could become oppressive and could encroach upon the liberties of the people.

They sought to restrict the power of Government, to safeguard individual freedom, and to protect the inalienable rights of life, liberty, and the pursuit of happiness.

That concept of government—with freedom of the individual as its keystone—made every American the master of his own destiny. It unleashed ambition, initiative, and inventive genius.

It offered equal opportunity for individual enterprise without government directives or regulations designed for political purposes.

It made possible our marvelous industrial development, our great transportation system and our rich agricultural production. It expanded the employment of our workers and encouraged the establishment of many thousands of small businesses.

It built our great cities and beautiful towns. It gave us our great colleges and universities, our centers of art and music, our splendid churches of every denomination.

All this magnificent record gives assurance that the future of the United States looks forward into a vast new world of greater achievement—provided we preserve the freedom of the individual—the opportunities and the incentive that have been America's strength in the past.

In your own industry the wonder workers of science are constantly revealing new miracles for the benefit of mankind. On every frontier of human progress we are searching out the secrets of nature to fulfill the promise of a better world.

But we must take warning from the trend of recent years. The fundamental spirit of Americanism—the driving force that inspired every American generation in the past, is being destroyed.

We must take warning that personal liberty disappears as the Government strengthens its power to control the lives of the people.

We must heed the lesson of history which teaches that every nation which robbed the people of their freedom has gone down to destruction.

What are the dangers confronting America?

Let me outline briefly some conditions that threaten America's richest resource—freedom of the individual—and are undermining the whole structure of the American way of life.

First, Excessive taxation, now taking away from the people more than 30 percent of the total national income.

Taxes are so heavy that very little is left for the expansion of productive industry. This robs our workers of their jobs and destroys the real market for our products.

Human rights have always been lost when a nation, burdened with debt, goes deeper into debt and lays crushing taxes upon its citizens.

Over and over again this has ended in financial collapse and the fall of the government. The result is always misery and suffering under dictatorship and tyranny.

Second, Excessive spending, brought on by waste and extravagance at all levels of government, Federal, State, and local. We have so-called Federal grants, subsidies, and other handouts of the taxpayers' money, all imposing restrictions which take away rights that properly belong to the States or to the people.

In the international field we are pouring out billions of dollars to back up an uncoordinated and unplanned foreign policy.

Third, Concentration of power in a huge political bureaucracy at Washington, working constantly to fasten unwarranted Government controls upon business, industry, agriculture, and labor. It pours out great volumes of propaganda advocating socialized medicine and Federal control of our public school system. Its ultimate objective is a planned and regimented economy patterned after socialistic failures in England and other countries of Europe.

Fourth, Pressure groups, including many well meaning but misguided citizens, who demand the expenditure of public funds for selfish purposes and their own special advantage.

Fifth, Indifference and neglect on the part of so many of our people who take no interest in the affairs of government.

If our form of government is to survive we must have a part in it. It is our Government. The taxes it collects are our money. Its officers are our servants.

We have only ourselves to blame if bad government is the result of failure to accept our share of civic responsibility.

Sixth, The breakdown of moral standards in public and private life. Honest measures, decency, and statesmanship should take the place of craftiness, deceit, and political trickery. In all humility we should dedicate ourselves to the principles of religion, because good laws and good government are based upon religion and righteousness.

We should all work to put men at the head of our Government who will set an example of honesty and morality.

Never before in American history have the leaders of Government concealed, condoned, and protected corruption with the same arrogant disregard for ethical standards as we are witnessing today.

There is something wrong with our system when we contemplate taxing the illicit profits of gambling and other immoral practices in order to balance governmental budgets.

Seventh, Too much dependence upon Government for security. Too many of our people have been misled by unscrupulous politicians, of both parties, into thinking that whatever we get from the Government is free of all cost. That false promise of something for nothing destroys initiative and self-reliance.

Eighth, Communists in our Government and subversive teachings in our schools and colleges. This poisonous influence must be rooted out wherever it is found. There can be no compromise with communism. It is a philosophy that denies God. Its objective is the destruction of all human freedom and to rule the world by terror, tyranny, and bloodshed.

We must fight communism in our midst by preaching and practicing 100-percent Americanism. We must drive out of our educational institutions every teacher who adheres to the communistic doctrine. We must stimulate among our young people a deeper appreciation of American patriotism. We must make American history a basic course of study in every school and college.

Ninth, The increasing tendency toward government by executive directive instead of the constitutional legislative process. This violates the fundamental concept of our Government as one of laws and not of men.

The most recent major example was the directive issued by President Truman on August 10 ordering the dispersal of industry. A few weeks earlier both Houses of Congress had refused, by overwhelming votes, to give the President the power to direct where industrial plants must be located. Nevertheless President Truman, in flagrant violation of the clearly expressed will of Congress, resorted to an executive directive to accomplish what he failed to get through normal legislative channels.

The order gives the administration bureaucrats the power of life and death over all industrial expansion. It is put forward under the pretext that it is a defense measure to minimize the danger of atomic attack. But actually it is another move by the advocates of a planned and controlled economy to disrupt the whole pattern of American industry and place it under a system of socialist control.

No President of the United States has ever been given or has ever assumed such dictatorial power. It is to be enforced by refusing all Government aids for defense production to industries which fail to meet so-called "satisfactory standards of dispersal."

It has been argued that the Government intends only to suggest and encourage the spacing of defense industries a few miles apart. But to my mind the President's order has within it the power to pass a death sentence upon any industry which incurs the displeasure of politically minded bureaucrats. It can curtail defense production. It can destroy the free enterprise system which is the foundation of our industrial greatness.

Tenth. Government competition with private enterprise. The Federal Government owns or is financially interested in about 100 important business enterprises with a direct investment of about \$20,000,000.

The Government is engaged in the business of lending money, guaranteeing loans and deposits, writing life insurance, producing, distributing and selling electric power and fertilizers, operating railways and ships, buying and selling farm products, and smelting and selling metals.

The Government does not belong in any of these business activities. Every dollar that the Government collects in taxes, every dollar that it pours into enterprises that compete with private business or industry, was produced by the free enterprise system. Every dollar that the Government spends was produced because freemen had the courage to risk their savings in ventures that promised a return on their investment.

The thought I would like to leave with you is this:

We will not return to sound, sensible, honest Government unless men like you go out and fight for it.

You have a choice to make.

You can sit back and merely complain about high taxes, excessive spending, socialistic schemes, advancing communism and increasing corruption or you can swing into action.

If you want to win this fight you must come out slugging.

You will have to battle every step of the way against the entrenched power of a bureaucracy with more than 2,500,000 employees on the public payroll.

You will have to struggle against an administration leadership that sees no wrong in lies, deceit, political favoritism, and personal gains from Government loans and contracts.

It will not be easy—but if we go into the fight with the spirit of patriotism and sacrifice, as a great crusade to save America, we can gain a glorious victory.

We can preserve for future generations America's richest resource—freedom of the individual.

Pacific Pacts Tied to Japan Treaty Are United States Reply to Soviet

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of September 1, 1951:

PACIFIC PACTS TIED TO JAPAN TREATY ARE UNITED STATES REPLY TO SOVIET

(By Neal Stanford)

WASHINGTON.—The Japanese Peace Treaty, scheduled to be signed shortly in San Francisco, is Washington's answer to the Soviet challenge in the Pacific.

But it is not the total answer.

The treaty, believed here not to be in real danger despite Moscow's decision to walk into the conference, and New Delhi's to walk out, is only part of Washington's plan for peace and security in the Pacific.

Its contribution is that it restores Japan to a place of dignity, equality, and opportunity in the Far East; it includes Japan in the family of liberty-loving nations allied against the aggression-minded Soviet bloc; and it puts the greatest industrial workshop in Asia to work for the free world.

Accompanying the treaty will be a series of defense arrangements that are designed to give to the Pacific a sense of security comparable to that given the Atlantic community of nations by the North Atlantic Treaty.

THREE OTHER PACTS

There is the Philippines-American mutual defense pact, being signed here in Washington this week, to be followed by an Australian-New Zealand-American security arrangement for the South Pacific to be signed in San Francisco on the eve of the treaty conference. And, finally, there is a Japanese-American defense pact, designed to assure Japan against Soviet aggression, which allows the stationing of United States forces in the Japanese islands, and which will be signed following the conference.

These three defense pacts aim at covering the Pacific and giving the free nations of that part of the world the assurance of American cooperation in mutual defense against Communist aggression.

Together, the Japanese treaty and these defense pacts constitute Washington's answer to Moscow's imperialist ambitions in the Far East.

DIPLOMATIC CHANNELS

As the delegates gather in San Francisco, the months that have been spent in drafting the treaty text emphasize these facts about the pact:

It is unique in that it has been drawn up entirely through diplomatic channels—not in an assembled conference.

While United States Ambassador John Foster Dulles has done most of the spadework—and footwork—in getting the treaty drafted, other nations have made notable contributions. The British, who are sponsoring the text along with the United States, say that a good half of the final draft is their handiwork.

It is notable, if not unique, in its leniency toward the "enemy." It is nonpunitive, nondiscriminatory. It does not shackle Japan with impossible reparations—in fact, a few nations are saying it does not impose even possible reparations.

JOINT RESPONSIBILITY

It anticipates the future defense of Japan to be a joint responsibility, with the United States and Japan as the original contributors to the islands' security against Soviet aggression, but with other powers possibly entering the picture later.

While the San Francisco Conference, with the Russians attending, is not going to be the perfunctory affair at first envisaged, the prospects of the Soviets disrupting the conference are nil. They and their two satellites attending (Poland and Czechoslovakia) are in a distinct minority, and Moscow possesses no veto it can use for wrecking purposes.

The conference is expected to surmount whatever obstacles Andrei A. Gromyko, Soviet delegate, and his colleagues present, though there are sober second thoughts in the capital that suggest it might have been better to sign—as well as negotiate—the treaty through regular diplomatic channels rather than face the Soviet pyrotechnics at San Francisco.

BILATERAL TREATIES

In anticipation that some nations would not sign the treaty at San Francisco, a novel feature was introduced, authorizing bilateral treaties similar to the main treaty for just such cases. Thus India, which is boycotting the conference, has the opportunity—should it ever have the desire—to negotiate a peace treaty with Japan.

India's action was a greater disappointment to Washington than Russia's decision to attend. For India's presence would have given the conference an extensive Asian flavor.

However, though India and Burma are sitting San Francisco out, the presence of the Philippines, the Indonesians, representatives from the three Indochinese states of Vietnam, Laos, and Cambodia, and delegates from Pakistan, Iran, and Iraq, as well as Liberia and Ethiopia, rob Moscow of its contention that this is a non-Asian treaty and a white-man imposed pact.

But there is no hiding the disappointment, even disillusionment, that fills Washington over Prime Minister Jawaharlal Nehru's decision to boycott San Francisco. Mr. Nehru is fast becoming in Washington eyes a fallen hero, at a time when his help was much wanted.

General MacArthur's Part in the Japanese Treaty

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, September 14, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an Associated Press dispatch entitled "Dulles Congratulation Sent to MacArthur," and an editorial from the Washington (Pa.) Observer entitled "Major Architect of Treaty Not Present," dealing with the part General MacArthur had in the shaping of the Japanese treaty.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

DULLES CONGRATULATION SENT TO MACARTHUR

SAN FRANCISCO, September 8 —A telegram of congratulation was dispatched to General MacArthur by John Foster Dulles as the

Japanese Peace Conference came to a close here today.

Mr. Dulles' message, addressed to the general at his hotel in New York, read:

"As we are about to sign the Japanese peace treaty, my thought like the thoughts of other delegates will turn to you.

"You will be present in spirit, for the signing delegates and the witnessing multitudes all know that without your great leadership in war and peace, the results achieved here would not have been obtainable."

General MacArthur, who was removed by President Truman as supreme commander of the United Nations in Japan only last April 10, was not officially invited to the conference.

[From the Washington (Pa.) Observer]
MAJOR ARCHITECT OF TREATY NOT PRESENT

Progress at the conference on the Japanese peace treaty has been most encouraging, but under all rules of sportsmanship and justice it would seem that Gen. Douglas MacArthur should be among those present to at least take a bow.

It is quite true that the shapers of policy are entitled to proper credit for the good and bad results in the Far East, but General MacArthur was the real bulldozer.

Policy is shaped at Washington, but the execution is in the hands of envoys in the field. General MacArthur was made the dominant figure in the Far East and sent to Japan in charge of the occupation of that country.

It was under the leadership of General MacArthur that Japan was transformed from an enemy into a country friendly enough to be restored to its former position among the nations of the world.

The firm hand of General MacArthur halted the Communists in their efforts to gain a foothold in Japan and foiled all their attempts to dominate early diplomatic sessions on the future of Japan.

General MacArthur was given recognition by United States leaders at the conference for the part he played. We believe his presence would have had a fine effect on the representatives of the more than 50 nations present.

General MacArthur may be slighted by those who oppose him, but we believe that history will accord him the honor due him as a warrior and a statesman in the Far East, and Japan in particular. Politicians may have a temporary advantage, but it is seldom that they attain a lasting place in history.

Most Americans know him to be one of our ablest men, and we believe the world recognizes him as such. His deeds and works will stand the test of time and be recorded in full measure in the history of world affairs.

Illegal, or Just Improper?

EXTENSION OF REMARKS
OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. McGUIRE. Mr. Speaker, under leave to extend my remarks I wish to include in the RECORD an editorial entitled "Illegal, or Just Improper?" which appeared in the August 18 issue of the Bridgeport (Conn.) Post:

ILLEGAL, OR JUST IMPROPER?

Jim Farley, more formally the Honorable James A. Farley, has for many years played

a large part in American affairs, as an adviser to Presidents, as a public official, and now as a head of an important business corporation. No man in American public life has a greater hold on the affections of the American people than Jim Farley.

One reason for this public admiration and respect is the high moral standard he has always maintained. On this point he said something singularly appropriate in an address given at Ithaca College on May 12 this year. He was deploring the cynical attitude which prevails in some high spots both in our own country and others, pretending that a line of conduct which is highly improper is all right provided only that it is not illegal. He said:

"We are told that if the act of a public official is not illegal that it is necessarily proper and always excusable. We are told that there is a fundamental difference between what is illegal and what is improper.

"I do not see this difference because what is illegal is merely one of the improper things that happens to have been the subject of legislative action. We have got to pass judgment against, and so far as we can, eliminate the improper as well as the illegal in our public life.

"Our public servants elected to high office have a duty far greater than that of merely enforcing the law and collecting taxes and spending our money. They have the duty of moral leadership in the country.

"For if they do or condone or permit things that are improper, they are destroying the very fabric of public morals and the poison moves down into all of the ranges of our population. When men in high places make hundreds of thousands of dollars through their improper acts, it is a hard thing to maintain purity and integrity in the sport of boys in college and on the sandlots of the Nation."

When Jim Farley uttered these words in Ithaca no whisper of the impending West Point scandal had reached the Nation. But how prophetic these words were. And how they did hit the West Point nail right on the head.

How the Government Succeeded in Reducing Beef Supplies in the Face of a Record Cattle Population

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from Economic Trend Line Studies:

HOW THE GOVERNMENT SUCCEEDED IN REDUCING BEEF SUPPLIES IN THE FACE OF A RECORD CATTLE POPULATION

It is now beginning to be clear that Washington is succeeding in the most difficult and baffling undertaking in all its long and earnest efforts to reduce the food supplies available to the Nation's consumers.

The problem is that of reducing the supply of beef to consumers in the face of the largest beef-cattle population in the history of the country—no less than 46,500,000 cows, calves, and bulls. This achievement now receives the longest horns of all our great national dilemmas.

With sheep it was easy. A bright young man in the Department of Agriculture conceived the brilliant idea of ordering the sheep growers to make their ewes get together and

to pick different times throughout the year to bear their lambs and not have them coming all in a bunch in the spring. The directive was sent out right in the middle of the spring lambing season for maximum effect. The results exceeded everybody's expectation. The sheep population is now the lowest since Civil War days.

When the Government wanted the cotton crop reduced, the Department of Agriculture simply ordered every other row plowed under. With pigs, which expect to be slaughtered eventually anyway, the Department simply ordered a lot of the little squealers exterminated. In reducing the potato supply, the Department had the tubers spread out on fields to rot. They spoil easily anyway.

It wasn't till they came to reducing the egg supply, however, that the agricultural people demonstrated the heights of efficiency and competence of which they are capable. They ordered the egg supply reduced by drying them and then set standards of dryness that taxed the brains and ingenuity of the engineers who designed the dryers. But it was in storing the dried eggs that they showed the touch of imaginative genius and enterprise that identifies Americans throughout the world.

They decided to store dried eggs in a Kansas cave. It was a magnificent idea from a publicity point of view because it exploited the magic of the West which has held the imagination and interest of the American people throughout our history.

With so many brilliant successes behind them it is no wonder that the Washington people decided at last that they were ready to tackle a situation that had defied the efforts of some of the Nation's most practiced bunglers.

It is difficult to exaggerate the formidable character of the problem of reducing the beef supply. All animals multiply at a most alarming rate and cattle are particularly hardy beasts. They graze on the open range or pasture and acquire most tenacious characteristics. On top of this, farmers gorge them with corn after they are taken from the range to give them added weight.

The nature of the bovine is indicated by the fact that it is the adversary in a popular Mexican sport. A bullfighter in disposing of a male bovine faces a difficult and a dangerous task, but afterward the bull is dragged away and heaven knows what becomes of it. In a way a bullfighter can be said to be reducing the beef supply, and certainly in a very courageous way.

At the same time it can be said that the Washington bureaucrats have demonstrated just as much rash courage as a bullfighter in tackling the problem of reducing the beef supply. It should be remembered also that Washington is dealing with the much more difficult female bovine. A cow won't charge like a bull except when protecting her young but when she does she is a much more dangerous animal. You can't distract her by waving a red flag even if she belongs to a Republican.

At any rate there is no denying the enormity of the problem. Here was the cattle population at an all-time high with the imminent prospect of an overabundant supply of beef in the butcher shops. Other Washington administrations might have tried to reduce the beef supply by encouraging people to eat more beef or feed more to their dogs and cats. But the present administration is of a different temper.

Undaunted by the frightening prospect of thick, red steaks piling up in butcher shops until other faces besides the butchers' were red, our great Washington production cutters determinedly sought and found a solution. They found their answers in corn and, like all great discoveries, it turned out to be absurdly simple.

It is well known even in Washington that cattle are fed corn to increase their weight

and thereby enhance the beef supply. Thus with many minds of great energy and competence assailing the problem it was inevitable that one of them should discover that if it were made unprofitable to feed corn to cattle, automatically the increase in beef production would be halted.

Fortunately the Department of Agriculture had already jacked up the prices of corn and other feeds under the farm price parity laws until it wasn't very profitable to put feed into anything but beef cattle and hogs. Thus the only action necessary after the original discovery was made was to reduce the market price of cattle to a point where cattle feeding, too, became unprofitable.

As a matter of fact the most time-consuming decision was encountered in the selection of a name for the action to be taken. It would gain public acceptance much more readily if a name could be found with pleasant and agreeable associations. To call it a price reduction or simply a cut in prices might well offend some sizable block of voters.

After much brain cudgeling and prolonged discussion the word "roll-back" was chosen, first of all because of its association, for example with farm activities. On the farm, there are razorback hogs and farmers often ride horseback. The word "roll-back" has home associations too with our fondly remembered piggy-back rides as children.

From the point of view, roll-back has excellent associations with rolling automobiles and other machines that move on wheels. This is indicated by the popular idiom which describes progress in any effort as getting it rolling. Not to be overlooked either is the words' association with popular songs such as Roll out the Barrel, Roll On, Thou Deep and Mighty Ocean, Roll, and so on. Roll, in fact, suggests ease of movement.

To sum up, the successful outcome of this effort to reduce beef production can be attributed to the discovery that farmers are actuated by the profit motive. Washington had long since learned that businessmen are devoted to making profits to a most unpleasant degree. To find that farmers also want to make money, while a disagreeable discovery in the light of events, it is also a very useful one.

As far as the farmers are concerned, they have simply moved their beef stock from the feed lot to the pasture. Cattle put on very substantially less weight in the pasture. So we have the comforting assurance that the beef supply will diminish throughout the summer. As to the unfed corn, that can be sold to the Government at the prevailing parity prices and we can be sure that the Government will prevent its use to increase anything but rodents and our great Washington bureaucracy.

ECONOMIC TREND STUDIES,
J. H. KELLEGHAN.

McDonough Constitutional Amendment Will Protect Against Loss of Civil Rights by Foreign Treaties

REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. McDONOUGH. Mr. Speaker, today is the anniversary of the signing of our Constitution which was approved

by the delegates in Philadelphia on September 17, 1787. It is indeed appropriate that on this day legislation should be introduced which will reaffirm our faith in the preservation of our heritage of freedom and rededicate this Nation to the basic rights of the individual through a constitutional amendment which will prevent those rights from abrogation by international treaty or agreement.

The civil rights of the people of the United States may be nullified unless the United States Constitution is amended as I am proposing by the introduction of a House joint resolution today which will have the effect of protecting these rights against the present Supreme Law of the Land clause in the Constitution as it applies to international treaties and agreements.

In view of recent court decisions and the present trend in international treaties, including extraordinary international agreements under the United Nations, the North Atlantic Treaty, the Rio Treaty with South American Republics, the Mexican Water Treaty and many others, apparently binding upon the United States, but entered into by the President or the Secretary of State on their own authority with or without the consent of the Senate, our civil rights may no longer be secure unless immediate steps are taken to enact the necessary legislation to prevent any treaty or international agreement from nullifying any of the rights guaranteed to citizens of this Nation under the United States Constitution. Many legal experts and the American Bar Association have been studying the need for a constitutional amendment to protect our civil rights and prevent the nullification of these rights by any foreign treaty or international agreement.

Quoting from article VI of the United States Constitution, the provision relating to treaty-making states that "all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land"; and the language of this provision has been subject to controversy among experts on international law almost since the ratification of the Constitution by the Thirteen Original States.

There is today no longer any reason for permitting this provision, which is of vital and personal importance to every United States citizen, to remain vague and subject to varying interpretation in our courts. Our civil rights which guarantee us individual freedom such as no other people in the world enjoy today must be safeguarded from any possible threat.

The amendment to the Constitution which I propose will clearly establish forever the rights of United States citizens under the Constitution and the Bill of Rights, and there could be no further question as to any expressed or implied power of a treaty entered into by the United States to have any effect under any circumstances upon these basic rights.

This amendment would not change the treaty-making power or the method of negotiating and ratifying a treaty.

If there are any rights to which individuals should be entitled which could be granted to Americans through international treaty, these rights could still be so established. This amendment only guarantees that no treaty shall ever be permitted to nullify or interfere with any of the rights which are guaranteed to our citizens under the United States Constitution and which we now enjoy. Ratification of this amendment, will forever insure us of a free press, freedom of speech and assembly, freedom of religion, and all other civil rights guaranteed to United States citizens under the Constitution.

House Joint Resolution 325

Joint resolution proposing an amendment to the Constitution of the United States relative to the effect of treaties and international agreements upon the civil rights of citizens of the United States

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. Treaties made under the authority of the United States and international agreements entered into by the Department of State or by the President shall be void to the extent that they abrogate or interfere with any of the rights guaranteed to citizens of the United States by the Constitution.

"SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission."

Mr. Speaker, the Legislature of the State of California recognized the need for an amendment to the Constitution such as I have proposed when on June 4, 1951, a joint resolution approved by the legislature was submitted to the Senate of the United States which read in part:

Whereas the decisions of the Supreme Court of the United States and of certain State courts have caused uncertainty in the minds of lawyers and of the public generally concerning the effect of treaties and executive agreements on our Federal and State Constitutions and laws; and

Whereas such uncertainty should immediately be clarified; Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the Congress of the United States be and it is hereby petitioned and urged to immediately submit to the several States an amendment to the Constitution of the United States, and the following form of said amendment is hereby suggested, to wit:

1. The representative form of Federal Government, consisting of the Congress, the executive, and the judiciary, the sovereignty of the governments of the several States, the express limitations on the powers of Congress, the guaranties of individual liberties, and the independence of the Federal judiciary, contained and guaranteed in and by this Constitution and in particular the first 10 amendments thereto, shall not be abolished nor altered by any treaty or executive agreement.

Judges as Witnesses

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. KEATING. Mr. Speaker, nick-naming Congresses which terminate during a presidential election year has become a popular and profitable sport in some quarters. It may be that this will be known as the Ethical Eighty-Second. Certainly, the room for improvement in this field become more apparent each day.

One large step forward would be accomplished in my opinion by the passage of a bill to prohibit judges from testifying as character witnesses. Two editorials supporting the proposal and pointing out the need for such legislation appeared recently in the San Francisco News and the Corpus Christi (Tex.) Caller.

Under leave to extend my remarks, I include them below:

[From the San Francisco (Calif.) News of July 20, 1951]

TOWARD ETHICAL CONDUCT BY SUPREME COURT JUSTICES

A Senate committee is investigating ethics, or their lack, in the conduct of Government agencies. And some Members of Congress are talking of enacting a code of morals to be applied to officials of the executive departments.

A bill just put before Congress deals with ethics on another high level—the ethics of Supreme Court Justices.

Introduced by Representative KENNETH KEATING, Republican, of New York, and approved unanimously by eight members of a House Judiciary subcommittee, it would prohibit Justices of the Supreme Court from testifying as character witnesses in any court.

This bill is a direct result of testimony as character witnesses by Justices Felix Frankfurter and Stanley Reed in the perjury trial of Alger Hiss, who despite their favorable words in his behalf, was convicted of lying under oath when he denied giving Government secrets to a Communist agent.

The two Justices not only proved themselves poor judges of character, as Mr. KEATING points out, they disqualified themselves from taking part in consideration of the subsequent appeal by Hiss. And they placed other Supreme Court members in the awkward position of being forced to pass on the guilt or innocence of a person whose character their colleagues had endorsed under oath.

It is unfortunate that Congress should feel it necessary to legislate a common-sense standard of ethical conduct for members of the Nation's highest court. But Justices Reed and Frankfurter are responsible for that necessity. The Keating bill should become law.

[From the Corpus Christi (Tex.) Caller of July 17, 1951]

JUDGES AS WITNESSES

In the first trial of Alger Hiss, convicted of lying about his Communist affiliations, three Federal judges testified in his behalf as character witnesses. Two were Justices of the United States Supreme Court. Justice Reed had been subpoenaed by the Hiss de-

fense. Justice Frankfurter was a voluntary witness. Chief Justice Magruder, of the United States court of appeals, was the third.

Now a bill by Representative KEATING, Republican, of New York, has been approved by a House Judiciary subcommittee which would bar Justices of the United States Supreme Court from testifying as character witnesses, or on matters of opinion, and is expected to come before the full committee soon. Mr. KEATING said frankly that he was motivated by the Reed-Frankfurter appearances in behalf of Hiss.

Representative SMITH, Republican, of Wisconsin, proposes an alternative to the Keating bill. The Smith bill would provide simply that no Federal judge could be compelled to testify as to character or to appear as a witness if similar testimony could be obtained from other witnesses.

In behalf of his bill, Representative KEATING suggests the possibility that some smart lawyer might subpoena most or all the members of the Supreme Court in a lower court trial; then the highest Court would be unable to pass on an appeal in the case. Justices Reed and Frankfurter disqualified themselves when the Hiss appeal came before the Court.

Appearance of Supreme Court Judges as witnesses is extremely rare. Somebody has unearthed a case in 1905 in which the names of two Justices appeared on the list of witnesses, but there is no record that they actually testified.

The House subcommittee considering the Keating bill received a letter from Fred Vinson, Chief Justice of the United States, declining to comment on the bill. He said he and his colleagues felt that they should not place themselves on record. The reason is obvious: The high Court might someday have to pass on the constitutionality of the bill.

Amendments to Railroad Retirement Act

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF THE RAILWAY LABOR EXECUTIVES' ASSOCIATION WITH RESPECT TO ACTION TAKEN BY THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE ON AMENDMENTS TO THE RAILROAD RETIREMENT ACT

On August 23, 1951, a majority of the House Committee on Interstate and Foreign Commerce adopted a substitute for all of the vital provisions of the original Crosser bill, H. R. 3669, generally referred to as the Railway Labor Executives' Association bill. The substitute adopted by the committee provides a 15-percent increase in benefits for pensioners and annuitants and a 33 1/3-percent increase for survivors.

The Railway Labor Executives' Association is flatly opposed to the enactment by the Congress of the committee bill. The committee bill fails in several important respects to assure the railroad workers, their widows and survivors, adequate protection in the light of present economic conditions and does not accord railroad workers equitable retirement in comparison with workers in other industries, in spite of the much higher taxes paid by railroad employees.

The four glaring deficiencies cited below completely justify our indictment of the substitute adopted by the committee:

1. If the substitute bill is enacted into law, some 60,000 current annuitants and pensioners, and many thousands of future annuitants under the Railroad Retirement Act, would receive less than they would if they were under the social-security system.

2. Practically all widows and all other survivors, including orphans, would receive less than they would receive under the social-security system. The following table clearly demonstrates the inadequate survivor benefits provided by the committee bill when compared with benefits under the present social-security system, and with the provisions of the original Crosser bill, H. R. 3669. This table is based on 7 years taxable service which at present is the average upon which existing survivor benefits have been computed.

Widows only

	Average monthly pay \$100	Average monthly pay \$150	Average monthly pay \$200
Present Railroad Retirement Act	\$26 09	\$30 10	\$34 11
Committee substitute bill	34 78	40 13	45 48
Present Social Security Act	37 50	43 13	48 75
Crosser bill, H. R. 3669	47 00	52 00	57 00

Widow with 1 dependent child

	Average monthly pay \$100	Average monthly pay \$150	Average monthly pay \$200
Present Railroad Retirement Act	\$13 48	\$50 17	\$56 85
Committee substitute bill	57 97	66 88	75 80
Present Social Security Act	75 00	86 26	97 50
Crosser bill, H. R. 3669	91 00	101 00	111 00

A glance at the above table illustrates vividly the shortcomings of the committee bill. In all of these instances, under the provisions of the committee bill, widows and orphans would receive less than they would receive under the Social Security Act. This deficiency on the part of the committee bill is sharply accentuated by the fact that the Crosser bill, H. R. 3669, in every instance provides more for the widows and orphans than is provided for in social security. This is completely justified in view of the higher taxes paid by railroad employees.

3. Based on actuarial estimates, the cost of the committee bill over and above income is 2.21 percent of taxable payroll. This creates a serious condition because the substitute provides for no savings to the fund nor does it provide for any additional revenues to the fund.

4. By increasing the benefits on a straight percentage basis, the committee bill gives the least consideration to the people whose needs are the greatest. The surviving widows of deceased railroad men are now receiving an average of \$29 68 per month. The average dependent child is receiving \$17 18 per month. The need in this category is the most compelling. A percentage increase across the board fails utterly to make the needed adjustments required by present economic conditions.

5. The Crosser bill, H. R. 3669, is superior to the committee bill for the following reasons:

1. Increases of 13.8 percent and 15 percent for annuitants and pensioners is provided along with a guaranty that in no case shall the minimum to which a beneficiary is entitled be less than he would receive if covered by social security. This guarantees

that no one in the railroad system will receive less than he would if covered by social security.

2. Surviving widows, dependent children, orphans, and parents are increased at least 60 percent and in many cases in excess of 80 percent. This restores the survivor benefits under the railroad system to a position better than social security by approximately 25 percent. This relationship between railroad survivors and social-security survivors is fully justified by the higher railroad tax rate and is in conformity with the intent of Congress in the establishment of survivor benefits for railroad employees.

3. The spouse's benefit is provided in H. R. 3669. Persons covered by social security are now entitled to spouse's benefit. It is not possible to justify a substantially greater railroad retirement tax rate without providing benefits equal to that of Social Security. In addition to recognizing the need of aged wives in this inflationary period, this section affords railroad employees the same consideration now being given persons covered by social security. The committee bill ignores the wives.

4. The annuities of persons retiring in the future will be increased substantially by the advancement of the creditable maximum from \$300 per month to \$400 per month.

The Crosser bill, H. R. 3669, can provide the substantially better benefits described above because it contains financing features and makes provisions to pay its own way. This is accomplished in the following manner:

1. The work restriction clause identical to that provided in social security which improves administration and balances Congress' policy in this respect.

2. The elimination of duplicate credit for prior service on which no taxes have been paid.

3. The transfer of casual employees who are not career railroad workers from the railroad retirement system to the social security system. At the same time this section guarantees that the affected employee shall not be made to suffer a financial loss as a result of having paid taxes into the railroad system.

4. Increases the taxable and creditable maximum compensation base from \$300 to \$400 per month.

The Railway Labor Executives' Association will make every effort to restore the original provisions of H. R. 3669. This bill was prepared after more than a year of study and consultation with the best experts in the field and is an integrated proposal with proper checks and balances which will continue our railroad retirement system on a firm and sound financial basis.

G. E. LEIGHTY,
Chairman.

Lower Marias Project

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. D'EWART. Mr. Speaker, under unanimous consent, I include in the RECORD additional editorial comment on the controversy which has arisen as the result of the article on the Lower Marias project, Montana, recently published in the Saturday Evening Post.

I believe this editorial, coming as it does from a newspaper in the Midwest,

far removed from the project itself, is noteworthy as an objective appraisal of the Post article:

[From the Moline (Ill.) Daily Dispatch of September 4, 1951]

POST GOES OUT ON LIMB IN MONTANA WATER ROW

In the Saturday Evening Post of August 25, an article entitled "The Big Water Gyp in Montana" describes how a group of 100 farmers fought the United States Bureau of Reclamation's program of damming the Marias River to irrigate the 37,512 dry acres of land they owned.

The article portrays rather colorfully how the farmers hauled the Bureau into court, made it get out of their area and stay out. The picture painted is one of hardy individualists scorning Federal charity and having to battle the big powers of the Federal Government to a standstill in court.

We are tardy in discussing the Post article because we've been doing some checking. The Dispatch has repeatedly found fault with the Bureau of Reclamation's tendency to squander money, and we felt that the Post article might provide heavy ammunition to fire another round at the Bureau.

But our investigation, which netted a long letter from the Bureau, articles and editorials from three Montana newspapers and statements by various persons involved in the case, indicate that in this instance it was the Post and not the Bureau that was all wet.

Space does not permit a full analysis of the variances between the Post article, written by one Edmund Christopherson, and the facts of the case, but here is a sample of inaccuracies, misstatements and misleading implications in the article:

1. The Post says the Montanans "hauled the Bureau into court." The facts are that the court hearing was on the districting of 127,000 acres for irrigation purposes at the petition of about 425 farmers operating as the Marias Improvement Association. Another 100 farmers, operating as the Lonesome Prairie Protective Association, submitted an accompanying petition that their lands be excluded from the irrigation district. After a hearing, which apparently was not "long and bitter" as the Post says, the court allowed both petitions. The Bureau did not figure in the court case at all, except in an advisory capacity at the judge's request after the arguments were heard.

2. The Post implies that the Bureau originated the "gyp" plan and "intended to shove the project down the ranchers' throats." The Great Falls (Mont.) Tribune, which should know, says the lower Marias irrigation project was dreamed up by one William Cowan, of Box Elder, Mont., in 1898 and was promoted by him and a number of small-scale farmers until the dream was realized in 1950.

3. The Post says Bureau Chief W. G. Sloan—a "big gun rolled out just in case"—threatened the farmers with the bureau's power. Sloan made one speech in Big Sandy, Mont., at the request of the Marias Improvement Association, explaining the project. We couldn't find evidence that Sloan had fired any big guns.

4. The Post fails to present arguments in favor of irrigating the lower Marias sector, as offered by the large group of proponents.

We regret to see such a reliable publication as the Post fall for an apparently phony crusade. We regret further that the Bureau of Reclamation was misrepresented as a Federal agency which shuffles people and money around like a Fascist power. There is enough confusion about the Bureau's true merits—and demerits—as it is.

It's all right with us when the Bureau or any other Government agency is criticized, but not when the criticism is not based on the truth.

Brevity at the Expense of Clarity

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the September 14 Washington Times-Herald entitled "Bvrvty at the Xpns of Clrty." Translated, I presume, that means "Brevity at the Expense of Clarity."

It is gratifying, Mr. Speaker, to know that someone besides myself is distressed at the gobbledygook with which we here in Washington—and throughout the country, for that matter—have to deal in our everyday relationship with our present administration and its multitudinous agencies.

I have noted long lines of letters and numbers on letters which I receive in my office, with the notation to refer to this identifying mark in making reply. I am not objecting to that necessarily. I understand that some sort of system must be adopted to keep separate the triplicate and more copies of letters, most of which will be filed away and promptly forgotten.

But as our administration's ever-growing patronage list in the guise of necessary agencies expands, the more complex, proportionately, becomes gobbledygook in its various forms.

There is one place, however, that I believe such double-talk should be eliminated: in the budget requests submitted by the several departments and innumerable agencies. Brevity, yes; clarity, by all means. But clarity should not be sacrificed for brevity.

Perhaps the point is labored a bit in this editorial, but it strikes home.

BVRYTY AT THE XPNS OF CLRTY

Commander John R. Howard of the Navy contributes a complaint to the Marine Corps Gazette on the kind of language used in the services to write operations orders or other official papers. He says that if the addiction to abbreviation grows any worse, it will be necessary to provide in the TO [tables of organization] for specialists to follow each commander, like a commissar in the Red Army, for the purpose of translating this military gobbledygook into basic English.

First, says Commander Howard, the writers of military communications eliminated all articles. If you are in uniform, you don't write "The quick brown fox jumped over the lazy dog," but "Quick brown fox jumped over lazy dog." Having accomplished this, the military authors reduced everything to consonants. Commander Howard says that to those long subjected to this jargon an old, obsolete vowel is enough to bring tears of nostalgia to the eyes.

If universally adopted, the commander suggests, the language of love would be expressed as follows: "I lv you drly, my darlg. Lt's hv a kss." Citing an actual example, the commander offers: "Send 3 Os and 12 Trs to this HQ. These prs are needed at once." Translated, this means that headquarters orders that 3 officers and 12 enlisted [troop] personnel be sent to it at once, as they are urgently needed. He says when he reads a dispatch of this kind he is strongly

tempted to put the "u" back in "color" as the British do.

The word aircraft is customarily rendered "ac" in one service, while in another that term is used to mean "accounts receivable."

"Picture an officer expecting several aircraft [acft to him] to arrive with reinforcements," suggests Commander Howard. "He receives a message from an officer of another service which reads, 'Ur ac arvd at 1800 pd Rpt at once.' Thinking his bills have finally caught up with him, the poor fellow leads a banzal charge."

The habits of expression cited by Commander Howard have had a not negligible influence in corrupting the language, already in a sad enough way. When some 18,000,000 persons are exposed to this sort of thing in one of the country's major wars, a force has been unleashed hardly less dangerous to decent English than that of the bureaucratic scribes who draft Federal regulations.

Who Should Do Choosing?

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. KEATING. Mr. Speaker, the caliber and character of our military leaders is of ever-increasing importance to the future safety of this Nation. It does not take a prophet to see that this state of affairs will continue for years and perhaps generations to come. Rational self-interest, therefore, dictates that our choice of men who will be the top echelon in years to come must be the best possible. It was for this reason that I recently introduced House Resolution 374, authorizing an investigation into the methods of appointing men to West Point and Annapolis.

Under leave to extend my remarks, I include the following editorial from the *Ithaca (N. Y.) Journal* on this subject:

WHO SHOULD DO CHOOSING?

Representative KENNETH B. KEATING, Rochester Republican, raised a recurrent issue and doubt when he recently declared it is highly questionable whether candidates for the service academies should be selected by Members of Congress.

"What peculiar qualification does a Senator or Representative have which enables him to select young men who are likely to make the best Army, Navy, or Air Force officers?" he asked.

"I am not sure," he continued, "that a higher caliber of youth in both character and ability would not result from selection through a process of screening by an independent board or otherwise."

The charge is often heard, whether justified or not, that "pull" and having political connections is the open sesame to the military academies, and that exclusive criteria of character and ability do not exist. It hardly can be charged against Members of Congress in all instances that they try to make a good choice that will do themselves the most political good. But such suspicions ever will exist under the present system. For good of the Nation and all concerned, it might be best if a system dedicated solely to obtaining only the best qualified youths could be devised.

It is of the mythology of purported American democracy that all should have equal opportunity within limitations of ability and

capacity. To remove ugly suspicion of the existence of an elite from which candidates are taken would be all to the good.

Mr. KEATING has properly introduced a bill calling for a House Armed Services Committee study of present methods of selection and directing the group to report any changes in the procedure it "may deem proper in the public interest."

Missouri-Kansas-Oklahoma Flood

EXTENSION OF REMARKS

OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks to further inform the Members of Congress as to the terrible devastation that has taken place by floods in these States in the Midwest, I wish to call the attention of Members to an article written by RUSSELL V. MACK, Congressman, Third District, of the State of Washington. Congressman MACK accompanied the Public Works Committee on their tour of part of this devastated area.

Mr. MACK describes the damage done in the Missouri-Kansas River Basin as he saw it. I wish to call the attention of the members to the fact that this flooded area included all the river watersheds of Kansas, except those regulated by flood control dams. The total damage to our State will run well over \$700,000,000.

The article follows:

THE KANSAS-MISSOURI FLOOD

(By Congressman RUSSELL V. MACK, of Washington)

I was one of 12 Congressmen who were members of a committee which, over Saturday, Sunday, Monday, and Tuesday spent 4 days inspecting the flood damage done in Kansas and Missouri by the recent floods and in holding hearings in the flooded area on how Congress might cooperate to prevent a recurrence of such a disaster.

The Kansas-Missouri flood was the greatest disaster, outside of a war, that has ever afflicted our country. Damage done by this single flood is estimated at more than \$1,000,000,000. The damage was far greater than that done by the San Francisco earthquake and fire, the Jamestown flood or the Galveston tidal wave.

In Kansas City I saw one area where about 4,000 homes were destroyed or badly damaged by the flood. In this one area alone, 11,600 people were made homeless. The damage in this one area was estimated at \$170,000,000.

In an industrial area of Kansas City, the damage was estimated at \$200,000,000 with many scores of industrial plants being put out of operation by the flood water and hundreds of stores flooded almost to ceiling height by the muddy waters.

In Topeka, Kans., about one-third of this city of 100,000 was flooded to depths up to 20 feet. This city was, at one time, crowded with 29,000 refugees. Four thousand homes were flooded with 8 to 20 feet of water. All of these homes had mud and muck in them 3 to 6 feet deep. When I was there, many of the occupants were engaged in shovelling this muck out of their dwellings.

In Topeka, as in Kansas City, the flood waters and mud had ruined the household furniture in the flooded dwellings. Over-

stuffed davenport and chairs were damaged beyond repair by the mud and water. The residents of hundreds of these homes dumped their overstuffed furniture into the streets to be hauled away by the garbage collectors. Bedroom suits, chairs, and wood furniture were washed clean of varnish and in most cases were warped beyond repair. Even pianos were dumped into the streets, so bad was their condition after the flood had receded.

I saw at least 500 automobiles—there must have been thousands of these, that were caught in the floods. There was mud and muck in them that extended in a solid mass from the floor to above the seats. These cars, including the engine, were filled with silt and sand. Repairmen warned motorists from attempting to move their cars. These cars were being picked up by trucks and hauled into repair shops where they will have to be taken entirely apart, every part cleaned and oiled and then reassembled. In Topeka, one dealer had 450 new cars flooded in this way.

In the vicinity of Topeka more than 10,000 head of livestock were drowned. Several thousand of these animals while still alive swam to the only green things in sight, the tree tops, and settled in crotches of these, where they died of starvation, thirst, and exhaustion. Ten days later, when the floods receded, the United States Engineers went into the territory and dynamited the swollen and rotting carcasses, which was the only way to get them out of the trees.

The floods covered, I was told, 2,100,000 acres, which is the area twice as great as that of the entire State of Rhode Island. I saw hundreds of square miles of this territory with its farm lands covered with a foot to 6 feet of silt and sand. Much of this will have to be scraped from the land before it can be used again. This year's crops in the area are ruined.

In one railroad yard 8,000 railroad cars were flooded, and of these 1,700 were loaded with merchandise, all of which was ruined. Among these cars were many hundreds loaded with grain. When the grain became soaked it bulged, blowing out the cars in great swellings that almost burst them. In Topeka four high bridges, much higher than most of our western ones, extend across the river. The flood waters ran across the floors of these bridges, and two of the bridges were washed away. In an attempt to save one of the railroad bridges heavy railroad locomotives were run out upon it to weight it down. Despite this the center span of this bridge was washed away, and with it four huge railroad locomotives went into the river.

Prior to going to the desolated area I had read much about the damage done by this gigantic flood. However, no writer can tell the story of the magnitude of the great desolation it wrought. One has to see it, as I did as a member of the congressional committee, to have any understanding of the magnitude of this disaster and of the heroic spirit with which its victims have reacted to this overwhelming adversity.

Behold Acheson's Vindication

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Behold Acheson's Vindication,"

published in the September 14 edition of the *Montgomery Advertiser* and written by the brilliant young editor of the paper, Capt. Grover C. Hall, Jr.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

BEHOLD ACHESON'S VINDICATION

The *Advertiser* is proud of the fact that it did not join the pack baying for Secretary of State Acheson's resignation last winter and spring.

The *Advertiser* was one of the few American newspapers that stood fast in its support of Acheson.

The *Advertiser's* position was lonely a few months ago. It is less lonely now.

We see on the front pages of papers this week a photograph of Acheson leaving the State Department. The caption says:

"Secretary of State Acheson has suddenly soared into such high public regard that people now wait outside the State Department doors in Washington to cheer him as he emerges. Acheson, who was held low in public favor just a few weeks ago, became a diplomatic idol with his skillful handling of the Japanese Treaty Conference. Here he waves to applauding admirers."

We see on front pages—wonder of wonders—Acheson's tormentor, the foul McCarthy, making grudging concession that Acheson laid the Russians out in great style at San Francisco.

We see Senator Knowland, often a passionate Acheson critic, conceding out of his intellectual honesty that "Acheson was superb" and did an "outstanding job" in lining up the world with Uncle Sam against Russia.

The Republican Dewey praises Acheson for "fine handling."

So recently as last May there was a national clamor to sack Acheson. Even Attorney General J. Howard McGrath, thinking of the 1952 election, shamefully and publicly sought to prod Acheson to walk the plank.

The *Washington Post*, formerly an Acheson supporter, abandoned him, saying, "At home as well as abroad he is a political deadweight. Foreign policy in his regime has become merely a carbon copy of Pentagon strategy without regard to policy or principle."

The *Advertiser* (of May 3) dissented.

"Defending Secretary Acheson is plowing in wet ground, but, nevertheless, here goes a furrow . . . Isn't it a whit paradoxical for newspapers that systematically entreat Mr. Truman to quit 'playing politics' to give Acheson the heave-ho for the reason that he is a 'political deadweight'?"

"It is a singular statement the *Washington Post* makes in asserting that the Secretary is barren of 'principle.' Was the intervention in Korea to defend a tiny state 5,000 miles away against an aggressor anything less than an act of principle of the first magnitude?"

"When Acheson sponsored a hedge of bayonets in Europe through the North Atlantic Pact was that less than an act of principle?"

"When Acheson lent himself to the Marshall plan to revive Europe, was that a lack of 'policy and principle'?"

"The truth is that no man in this Republic has fashioned more methods for resisting Russia than Acheson."

"And, finally, we may view the matter (resignation) from the Secretary's standpoint. It is reported that he has acted with complete propriety in offering his resignation to the President several times. It was not accepted."

"The Secretary has done his duty. He himself believes in his policies and himself. Is any parent in Alabama raising his kid to quit in such circumstances?"

The American people, by insisting upon the stacking of arms in 1945, were responsible for the Korean extremity. But Acheson became the goat.

The national cry for his resignation rose to siren pitch.

It began to subside when Acheson appeared before the MacArthur investigating committee and flattened his Republican tormentors.

They felt his steel and recoiled from it.

Only when in the grip of panic and tantrum could the country lap the dish that Acheson was an appeaser. He was, as should now be plain to the most obstinate among the dull, the worst enemy the Russians have had in America.

He has been the mainspring in the Berlin airlift, the North Atlantic Pact, the Marshall plan, the Korean intervention, and the system of military alliances in the Pacific.

When the Kremlin looks at Acheson it sees the man whose Marshall-plan inspiration kept the Russians from taking France and Italy as they took Czechoslovakia; at the man who has ceaselessly labored to hedge in Russia with bayonets in the east and in the west, at the cold, resolute negotiator who gave them the bum's rush at San Francisco.

It is preposterous—and always has been—to call Acheson an appeaser. He is, contrarily, the world's leading exporter of Russian frustration.

Consider this San Francisco report in *Time* magazine:

"The 49 signers of the Japanese Peace Treaty wrote a resounding diplomatic victory for the world's free nations, the sharpest defeat yet suffered by Communists. San Francisco was the most clean-cut demonstration yet of what bold United States initiative can accomplish. This fact centered particularly on two men, John Foster Dulles, and Acheson."

"Acheson personified United States determination to get on with the job. By contrast, the Russians sounded strangely half-hearted and ineffective. Against the west's new and surprising unity, the Communists had lost the power to paralyze, terrorize, and delay."

"Not even the frank threat from the Peking Radio that the fate of the Kaesong armistice talks might hang on events at San Francisco could crack the unanimity of the non-Communist world."

"Up stood Asians, Buddhists, and Moslems alike. Up stood small nations, which had trembled before at the first hint of Russian displeasure. Up stood those who had their own disputes with each other, but could resolve them in favor of a united front. Iran and Egypt, at Britain's throat in the Middle East, could still sign with her to stabilize the Pacific."

"Nor was the Japanese Treaty the only accomplishment . . . A new network of mutual defense treaties—between the United States and the Philippines, between the United States and Japan, a third among the United States, New Zealand, and Australia—projected United States strength into the Pacific as a stabilizing force against the old rivalries that communism loves to exploit."

This is an extraordinary diplomatic achievement. The *Advertiser* believes it firmly undergirds its oft repeated statement that America is winning the cold war.

From this triumph in the Pacific area Acheson rushed to a conference wherein to defy the Russians by tapping German resources for Eisenhower's growing army.

The arming of Japan and Germany may cause Russia to go to war. The risk has to be borne. But in any event, you can scarcely call the chief sponsor of this defiant, awesomely defiant act an "appeaser."

Thus when the Kremlin glowers at the lean and unflinching Acheson it beholds him who is organizing and arraying the world against Russia.

It is our considered opinion that the Russians would rather hang Acheson than Tito.

Additional Employees for the Senate Committee on Appropriations

EXTENSION OF REMARKS OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the *RECORD* an editorial entitled "Needed: Some Devil's Advocates," published in the *Washington Evening Star* of September 17, 1951, dealing with an appropriation for additional employees for the Senate Committee on Appropriations.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

NEEDED: SOME DEVIL'S ADVOCATES

In the course of approving the appropriation bill last week which covers the expenses of Congress the Senate adopted an amendment adding \$20,000 for the hire of additional employees of the Senate Appropriations Committee.

The amount of money involved was inconsequential. But the principle under discussion is important. And the unusually strong bipartisan support for the amendment reflected what seems to be an increasing spirit of frustration in Congress after the relatively futile efforts this year to cut down on prodigious Government spending.

The idea behind the amendment, originally proposed in another form by Senator THYE, of Minnesota, is to create in the Senate an expert staff adequate to deal not merely with budget recommendations for new appropriations, but to keep Congress more intimately abreast of how past appropriations are being spent. One logical way to go about this might be to increase the staff of the General Accounting Office, which is an agency of the legislative branch. But as Senator FERGUSON reminded the Senate, that move has been defeated by congressional refusal to appropriate the necessary funds.

The situation as it now is was summed up from two points of view by Senator McCLELLAN and Senator FERGUSON. Senator McCLELLAN said that the appropriations committees of Congress hear a one-sided presentation of budget estimates. The arguments all come from the people who are recommending the money that they want to spend. "We have to act on ex parte testimony," he said, "or we have to act arbitrarily in making reductions without having much information upon which to base reductions."

What this means in practice was described by Senator FERGUSON. For committee staff work on the \$57,000,000,000 military bill, one staff man was assigned. For two other appropriations bills, aggregating \$7,500,000,000, one staff member was assigned. There are not enough staff men on the Senate side to spare more than one for each bill, and in most cases one man must handle two or more bills. A really adequate job of analyzing these measures, said the Senator, would require the services of scores of technicians. All the Senate is planning to do now is to assign three or four men, with clerical help, to the job of analyzing each appropriation bill.

Senator DIRKSEN thought the additional appropriation requested should be a million dollars, instead of \$50,000. There is pending a bill, to which Senator McCLELLAN referred, to create a joint committee whose staff would work for both House and Senate in analyzing all appropriations—for the

House now maintains its own staff for that purpose. If, as President Truman seems to imply, real economy is the work of the devil, then Congress needs to organize a staff of devil's advocates who will spend all their time showing ways and means to reduce estimates sent to Congress from the Budget Bureau and the President.

While the debate over the tiny \$50,000 item was in progress, Senator BYRD's Joint Committee on Reduction of Non-essential Federal Expenditures was hearing some dismal testimony. The upshot of it seemed to be that Congress has practically lost control of the Government's purse strings. The purpose of the hearings now in progress is to develop some plan to regain that control. Such men as Representative DOUGHTON, the veteran chairman of the House Ways and Means Committee, said that there is no remaining method that he knows of to increase taxes again without endangering our national economy. Senator GEORGE, who has just finished hearings on the new tax bill, said the same thing. And this opinion is expressed in the light of prospective deficits of ten to fifteen billions a year—if the present rate of expenditure continues—even after the new tax bill goes into effect.

President Truman told an audience of cheering Democrats in San Francisco the other day that our prosperity and strength—"beyond anything the people ever dreamed of"—are the result of the system of free enterprise. The mood of Congress now is that the free enterprise system itself depends on whether new ways to reduce Government spending can be found.

Cuckoo Statistics

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I enclose the following editorial from the Boston (Mass.) Herald of September 14, 1951:

Cuckoo Statistics

President Truman slings a mean statistic. A casual reader of his budget-defense address Tuesday gets the impression that, considering the defense effort, Government expenditures are quite modest, kept that way by a penny-pinching Chief Executive.

Yet here are record taxes, with at least another \$6,000,000,000 coming up. What's wrong?

It's the way the President uses the statistics. These may not be the kind he calls butterfly statistics, taken out of the air with a net. They are cuckoo statistics, come to lay eggs in the wrong nest.

The President extracts defense expenditures from the budget because we must pay what it costs to be free. He extracts the national debt because we can't repudiate the signed obligations of the United States. He extracts veteran costs because he doesn't believe in economizing at the expense of men who have bared their breasts to save the country. He also extracts grants for the blind, aged, and needy, with the statement that money couldn't be spent for a better purpose. And finally he extracts a little half-billion item for highway grants, which somehow also carries an appearance of inevitability.

So, with \$60,000,000,000 written off as sacrosanct, the \$8,000,000,000 that is left just cov-

ers the bare cost of essential Government operations, like the Coast Guard, the FBI and the Public Health Service. Or so the President says.

It's an old trick, this marking off untouchable budget items. Too old to be convincing. For the chances for economy are everywhere. Even in the interest on the national debt.

Included in the debt item are a bunch of interest payment to Government trust funds and Federal corporations and agencies, and these payments form a concealed subsidy. The national service life insurance fund invests in Government securities and gets 3 percent interest, compared with the 2.2 percent paid to public purchasers of Government bonds. A couple of retirement funds and an Indian trust fund get 4 percent out of the Government. Taxpayers getting refunds from the Government enjoy 6 percent interest.

The Tax Foundation, Inc., computed that \$145,000,000 a year could be saved here, without incurring any of the dishonor Mr. Truman suggests.

If there are not savings also to be made in defense, veterans and grants to the States, then the millennium is here.

The President also has a prize cuckoo statistic in the statement that over the last 5 years "we" have operated the Government with a surplus of nearly \$8,000,000,000. "We" indeed. The despised Republican Eightieth Congress, over Mr. Truman's own vehement objections, effected reductions or rescissions in budget requests amounting to almost \$10,000,000,000. By far the greatest part of "my" 5-year surplus was achieved by the Republicans.

Even the present Democratic Congress has already cut \$2,000,000,000 off what the President calls his tight budget, and it's not finished yet.

But what is going to be hard for the average citizen to take is the President's calm assumption that all the complaint about taxes is really just blowing off steam—half the fun of being a citizen in this country comes from complaining. And he cites the man who goes into a night club and pays \$40 or \$50 but screams about a \$30 tax bill.

Believe us, Mr. President, any man who spends like that has a \$3,000, not a \$30, tax bill.

As against cuckoo statistics, let us have butterfly statistics.

Burial in Arlington of Sgt. John R. Rice, Winnebago Indian

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. CHAVEZ. Mr. President, the American press has innumerable writers who express the ideals and philosophies of our Government correctly. Amongst the many who have expressed them is Mr. Thomas L. Stokes. Only lately Mr. Stokes has written a very fine exposition of American ideals. It had to do with the burial of Sgt. John R. Rice, the American Indian boy, at Arlington.

I ask unanimous consent to have the article printed in the Appendix of the Record for the benefit of posterity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINDFUL OF OUR OWN FRAILTIES—BODY OF AMERICAN INDIAN HERO RESTS IN ARLINGTON CEMETERY AFTER REFUSAL OF GRAVE IN LAND WHERE FOREBEARS ROAMED

(By Thomas L. Stokes)

They have buried Sgt. John R. Rice, a native American, with full honors among the immigrants in Arlington National Cemetery.

He had no choice—this Winnebago Indian who, himself, had chosen voluntarily to serve the United States of America in two wars, the Second World War and the Korean War, in which he gave his life exactly 1 year ago. He had reenlisted in January 1946 after serving 4 years previously, and a veritable catalogue of decorations attest to his bravery.

John Rice had no choice as to where he would rest in eternity. His family had arranged, naturally, for his burial back home and had bought a lot in a Sioux City cemetery, which was appropriate in another symbolic way, too, for the Winnebagoes were members of the Sioux confederacy.

But that cemetery was only for "Caucasians," a restriction that applies to so many cemeteries all over this land of exclusive immigrants, and no place, certainly, for a dead Indian, even if a good Indian. So the President of the United States offered the family a place in Arlington National Cemetery, and they brought John Rice here.

For a word from the President of the United States is an order.

John Rice never had any choice. Nor did his family.

But, standing there watching the ceremony over Sergeant Rice, one could imagine that it would suit him well enough. The grave was dug on a hillside, with a young oak a few feet below it that will grow in time to spread its kindly shade over John Rice, two young catalpa trees just above it on the hillside and, across the paved road, another hill rising gently upward. In this green valley, had the road been a stream, you might well think yourself in Iowa about this time of the year, or Wisconsin where John's forefathers lived, or in any of the rolling prairie country, rich and lush, where his ancestors roamed so contentedly for so long—until the immigrants swarmed in hungrily, with a Bible in one hand and a musket in the other.

John Rice lies now among their descendants, men who like himself served their country in the United States Army. The little white slabs rose all around—William J. Weakley from West Virginia and Joseph Shurdan from Ohio and Carl Lowndes from Mississippi and William C. Thurman from New Jersey and Frederick De Sales from Maryland. And across the hill lie Gen. John J. Pershing and Gen. "Hap" Arnold and Gen. Walton Walker, commander of the Eighth Army who also died in Korea.

It's all democratic there, with no salutes required, and no questionnaires with race and color to be filled in.

John Rice became unwittingly a minority problem. His forebears were not the minority when the first immigrants arrived, when De Soto landed in Florida and drove his army of 600 through the swamps and morasses and wilderness of what later became Georgia; when Tonti and La Salle penetrated into John Rice's own native country; when Capt. John Smith unloaded his pallid sojourners at Jamestown; when the self-consciously righteous and forbidding Puritans embarked on New England's equally forbidding shores. Then an Indian could choose the whole continent to bury his dead, and no one to say him nay, and no restricting papers flashed in his face.

It all belonged to him.

The hypocrisy of refusing John Rice a grave anywhere in this country—when who has a better right?—was compounded somehow for an observer of the ceremonies in the showy and unctuous way we seek to absolve ourselves from our crimes against ourselves. As if we could wash it all away by draping our flag—which John Rice followed to his death and which covers so often such a multitude of our own sins—across his coffin and carting it on a caisson, with soldiers tramping along behind, and a band, and officials representing various branches of the Government and the services, and photographers rushing about and us reporters noting every little detail to prove to ourselves by a public record how fine a breed we immigrants are.

Referred to here is the idea, not the execution of it, for it was a simple, beautiful, and moving ceremony, something that John Rice's family and relations who were present can cherish—if they can forgive. So much better, perhaps, if the Government could just have suggested that they take John Rice out quietly somewhere to some virgin hillside in the public domain not privately owned by us immigrants, and lay him to rest in their own way, without benefit of bands and cameras.

But they had no choice. Nor did John Rice.

Very likely they can forgive, and will understand, for they, too, heard the chaplain read from the services:

"While we consign this body to the earth, let us be mindful of our own frailties."

Address of Ben H. Wooten

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ben H. Wooten, president, First National Bank in Dallas, at dedication of Hamilton Moses Steam Electric Station, near Forrest City, August 30, 1951:

An invitation to speak on this occasion is indeed an honor, and I am deeply appreciative; in fact, I am home again. My heart and affections were lassoed by Arkansas a long time ago.

We are here for a threefold purpose, namely, the launching of the Eastern Arkansas Industrial Expansion Exposition, the dedication of the \$15,000,000 Hamilton Moses power plant, and to honor a great American, Colter Hamilton Moses.

Henry W. Grady, in making a speech in New England some 70 years ago, said: "Far to the south lies the fairest and richest domain on this earth. It is the home of a brave and hospitable people. There is contained all that can please and content mankind." He was thinking of eastern Arkansas.

Nature has done much for Arkansas. It has a climate adaptable to any type of business. It offers plenty of living room. Arkansas is a State where one may round out his desires. It has historic romance and color. It has an abundance of raw materials. Beneath her surface lie oceans of oil, deep reservoirs of gas, and there are treasures stored in her forested hills.

The major problem confronting Arkansas is the changing of the flow of raw materials and manufactured goods. Wealth is generated in the manufacture of raw materials into finished products. High wages are not

paid to the producers of raw materials. Arkansas has the power to turn its rice into crispies, its cotton into cloth. It has the power to convert the hides of its cattle into shoes, and we have finally come to the conclusion that it is sheer nonsense to ship our raw materials away, with the result that many of our people remain poor. It is no disgrace to be poor, but that is all I can say in its favor; I have tried it.

This exposition demonstrates the fact that Arkansas is not waiting for some magic wand to create for her a balanced economy. We have often heard that the wheel of fortune spins—"Round and round she goes, and where she stops, nobody knows." The wheel of fortune is actually very much like a bicycle wheel. It does spin round and round when it is pedaled, but only when it is pedaled, and the rider must do the pedaling.

Eastern Arkansas is more than just another land of promise. From this day on it will shine brighter and brighter in a firmament of a balanced economy. If oratory, newspaper articles, and speeches could industrialize this State, it would have been done long ago, but it takes dollars that can be converted into brick and mortar. It takes money that can be converted into plants and equipment.

There is no curfew on eastern Arkansas's opportunities, unless it be a lack of desire and willingness to work, plan, and finance. This exposition is conclusive proof that the leaders of eastern Arkansas are not lacking in this desire.

The advent of this exposition and the dedication of the Hamilton Moses power plant mark the beginning of closer cooperation between management, capital, and research. We shall coordinate capital, know-how, and raw materials. We shall take hold of scientific research in a more affirmative way, for some day the well of natural resources will run dry, and only through research and courageous action can we have a completely balanced economy. One of these days, in the not too far distant future, we should expect to see in this area a panorama of industries, in the shades of which many happy and prosperous people will be working and building eastern Arkansas.

I know nothing about electric power or its production. I do know that electric power has helped to make 150,000,000 people the best housed, the best fed, and the best-dressed people on earth, all at a cost less than we pay annually for cosmetics and cigarettes.

I do know that this electric age should continue unabated, and I further know that it will do so if not hampered politically.

This new \$15,000,000 power plant is a far cry from Edison's little Pearl Street plant in New York City in 1882 that served 59 customers. Industry, courage, and inventive genius have characterized the American utilities management since that humble beginning, and it behooves all of us to defend it. We should have no patience with those persons who advocate taking the electric industry away from its builders. The Government cannot run electric plants any more efficiently than can private industry. You just cannot talk cost out of operation.

Let us look at the record of electric companies. Electric utilities, privately owned and publicly regulated, supply 93 percent of all electricity produced for public use. For decades they have maintained their establishments at the height of scientific discovery and development, always ready to deliver additional electric energy to industry and the home.

Ninety percent of the power in the Nation is generated from fuel. Arkansas has an abundance of coal, oil, gas, and lignite.

The power plant we are dedicating is actually a great new factory for eastern Arkansas. Too often we do not attach sufficient importance to a power plant as a new industry.

Actually it produces a valuable product just as much as a paper mill or a garment factory. The kilowatt is the lifeblood of modern civilization, and it is the only item in the budget of the people of Arkansas that has not increased in unit price in many years. Economists tell us that the 1951 food dollar is worth only 47 cents, the clothing dollar only 54 cents, and the rent dollar only 85 cents. "The electric dollar is worth 104 cents—the only item worth more today than ever and yet costing less.

The Hamilton Moses kilowatt factory cost \$15,000,000, and every cent of it was supplied by private capital. It is paying taxes that others may use, I trust, not in competition with it. During the 15-month period of its construction it provided jobs for more than 500 men. It will have about 45 regular employees. They, too, will own homes and pay taxes. The building of this plant brought a major collateral benefit to this section of the country, in that the volume it will use makes it possible for natural gas to be brought into the area for the service of all.

This new factory symbolizes the spirit of Arkansas—the spirit of a people who have literally raised themselves by their own bootstraps into national attention through the now famous Arkansas plan. The naming of this plant is a fitting monument to Colter Hamilton Moses, the author of the Arkansas plan.

The science of medicine had its Pasteur; printing had its Franklin; telephone had its Graham Bell; electricity had its Edison; and Arkansas has its Ham Moses—and Ham Moses has his Mrs. Moses. In the life of every strong man there is a good woman of strong character. Someone said a long time ago, "The highway of success is filled with women pushing their men along," and we would have Mrs. Moses know that the honors of this day include her in a major way.

There is something in a name. I am thinking of Hamilton Moses. This name indicates a heritage and tradition of devotion, of worship, of keen business acumen and leadership.

Exodus, the second book of the Bible, tells of a boy who from the beginning was destined to greatness. He was tending the flock of his father-in-law at the foot of the mountain of God. He saw a bush; it was burning, but it was not consumed. It aroused his curiosity, and he went to investigate. God called to him out of the bush and gave him the difficult task of leading 600,000 people out of personal, political, and economic slavery.

There is an analogy. Did it ever occur to you that a light globe gives light but is not consumed? Ham Moses has always stayed close to the mountain of God, as evidenced by the fact of his leadership in Ouachita College and his continuous teaching of the largest men's Bible class in the State. Early in life he learned what to think, what to say, and how to pray. He, too, like Moses of old, has been a spokesman for God and His people.

His parents gave him the name Hamilton, which brings us to another analogy, that of Alexander Hamilton, a genius from birth. Early in life Alexander Hamilton wrote to a friend: "I'll risk my life, though not my character, to exalt my station." Our own Hamilton Moses would never risk his character in exalting his station. Alexander Hamilton was also a great orator. He organized meetings, gave addresses, wrote letters, newspaper articles, and pamphlets urging the people to stand firm against English oppression. He knew the science of government as did no other man in America, and it became common for men to say, "When in doubt ask Hamilton." He preserved the credit of the Nation. Another thing he often said was, "The prosperity of the people is the

prosperity of the Nation." That sounds like Hamilton Moses.

Alexander Hamilton was destined to help fight America's battles, to share in her victory, to help make of her a great nation. He wove his name into the web of her history so that as long as the United States of America shall be remembered, so long shall be the name of Alexander Hamilton. So it is with Hamilton Moses. As long as the State of Arkansas shall be remembered so shall the name of Hamilton Moses.

We have in our honored guest today the keen business acumen of Alexander Hamilton and the sturdy Christian characteristics of Moses of old, a leader of whom there is none greater.

Hamilton Moses possesses great personal charm and magnetism. His achievements are the most effective testimony of how his character, industry, and know-how have worked not only for his company but for his State and Nation.

It has been said, "There is no better test of the character of a people than that afforded by knowing what kind of men they honor." We who are here today are willing for our past, present, and future to be judged by the type man we honor. Someone has said, "Men measure each other the first time they meet and thereafter every time they meet." Under each measurement Hamilton Moses grows in stature, and he will continue to do so.

There are monuments all along the way which he has earnestly, modestly, and efficiently built. Look around in the city in which he lives, a better city because he lives in it. Look at the State in which he resides, a better State for his having chosen it as his home.

We honor him for many reasons. He is a gentleman of the highest ideals, possessed with business and statesman acumen, which makes for leadership. He is a man who knows all the time what to do next. Few men, especially in an emergency, know what to do next and wait for some impulse to direct their movements. By his depth of thought and precision of bearing he has the ability to dominate an assembly and inspire followers. He has the courage befitting a stalwart American citizen who firmly believes in the American way of life and its defense from destructive forces from within and without.

We believe, as he believes, that all the United States Government owes us is to keep this a land of opportunity where we may reap the rewards of our labor. We believe, as does he, that personal economic security cannot be procured through ballots, bayonets, or bullets. Such means are used to assure the continuity of our Government, but when the afternoon of life is well spent and the gold of the sunset meets the gray of the twilight, there will be more safety, comfort, and dignity in living off the security acquired through thrift than there will be in wondering for whom to vote in order to keep a pension of dependence from being cut.

Hamilton Moses' mother and father were his inspiration, and they planned to send their son to Henderson-Brown College, the Methodist school at nearby Arkadelphia. He got to Arkadelphia, all right, but found a better baseball squad at Ouachita College, and the Baptist school was located closer to town. It was 3 weeks before his Methodist family learned their son was enrolled in Baptist Ouachita. He has been pitching and catching for the Baptists ever since.

Those of us who know Hamilton Moses best recognize in him a lovable, warm-hearted fellow, radiating friendship, human kindness, and helpfulness. Even though he is an intellectual and industrial giant, he is still an unspoiled big man. He towers in the forest of big men, and certainly at this period in the history of our State, the Nation, and the world, we find a need for greatness in men. Judged by the principles upon which this Nation was founded, the prin-

ciples under which it has become great, he is a citizen first-class, a delightful friend, whose handiwork will ever be reflected on the pages of history recording the development of Arkansas and the Southwest.

We are here today because we like Hamilton Moses. We like what he has done. We like the way he has done it. We esteem him for having done so many things so well. We honor him because over and over again he has earned our admiration and devotion.

If I were an artist of great talent, having in my possession an inspired brush, with access to immaculate colors representing courage, vision, fairness, justice, industry, and vision, I might be able to correctly portray the likeness of Hamilton Moses.

Colter Hamilton Moses, I would have you know that—

"It isn't the man you hope to be,
If fortune and fate are kind,
The man the eyes of the world will see
In weighing your will and mind;
The decade ahead is a chartless sea,
And next year is a world away;
It isn't the man you would like to be,
But the man you are we honor today."

It is a great joy to me to have a part in this ceremony. We shall never have the opportunity to honor a more distinguished and deserving American, and I know you join me in the prayer that God shall continue to give him health, strength, and happiness—that God shall guide and protect him, not only for himself and his family, but for all the people of this Nation.

A Corporal Finds the Answer

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD, this down-to-earth editorial from the Montreal Gazette in Canada of August 23, 1951.

A common man, Corp. John B. Moullette of Camden, N. J., did some soul-searching while he was stationed in California and before he went to Korea.

He spoke the doubts of many Americans.

He wanted to find his way through the smoke screen of diplomacy and discover the simple answer which is "truth."

He would be able to do his job better if his Government told him the score, but, as it turned out, he had to do this for himself.

Earnestly and honestly he fought a dual battle against the enemy and through the confusion of high policy.

And the decision he came to was this: In Korea you know what you are up against.

The Gazette takes it up from there:

A CORPORAL FINDS THE ANSWER

"In Korea you know what you're up against."

That is the opinion of Corp. John B. Moullette, of Camden, N. J. And the opinion of Corporal Moullette has come to be of particular interest.

For Corporal Moullette has come to be the type of the average soldier, who has gone from his North American home, to fight in a far-away land of which he knew little, and for a cause which has been bewildered by

doubts and questionings. It is a matter of some importance to Corporal Moullette to know why he should go so far to fight. After all it is his life that is at stake.

While still in camp in California he wrote a letter home to his father in New Jersey, saying that he wasn't quite sure what it was all about. His father, without letting him know, sent the letter on to Mr. Dean Acheson, the Secretary of State.

So it was that a corporal who had his own private doubts, found himself, quite unexpectedly, thinking out loud, with his father, and the Secretary of State, and the whole world as an audience.

Under a democratic system it is important what Corporal Moullette thinks. The American people have always been willing to sacrifice themselves generously. But they are not willing to accept sacrifices simply because their Government in its own secretive wisdom, tells them what they must do. And there is no cause to distrust a system in which even a corporal's questionings are not dismissed.

Mr. Acheson took time out from his work in the State Department to write an answer. And he also wrote to the corporal's father. "What is important is that your son should feel," he wrote, "and that all our young people should feel, a strong faith in the validity of the ideals on which this country was founded and on which it now endeavors to guide its actions."

Corporal Moullette appreciated the answer. But he was only mildly impressed. So many words have been written and spoken about Korea that the barrage almost deadens the ears. But Corporal Moullette went on to Korea, and left opinions behind to come face to face with the facts. And the facts he found to be terribly real. They were like a slap in the face.

In Korea there is no doubt about what aggression is. Nor is there much room for doubting who is the aggressor. The enemy is face to face. Says Corporal Moullette today: "Over here I've had a chance to see what I'm fighting for. . . . In Korea I've seen that aggression has got to be stopped, and if it takes guns to stop it, then guns we must use."

But Korea brings not only an awareness of the enemy: it brings awareness also of how real is the comradeship in the struggle. For the first time in his life the words about one world have a real meaning for him. His notebook is crammed with the names of new friends, infantrymen and artillerymen and truck drivers from England, France, Belgium, and half a dozen other countries. And when he gets out of the service and winds up college, his first major project is to make a trip through Europe, and make the calls he has promised to make.

It is not just a matter of one nation fighting another. It is, in actual practice, a union of nations fighting a common aggressor. What Mr. Acheson was writing about no longer seems quite as formal and detached. "That's what Mr. Acheson was trying to tell me," says Corporal Moullette, "but what I didn't really discover until I came out here was that all people are one people, and we must join together if we are to have protection."

Korea is a long way from Camden, N. J. And it is also a long way from Canada, and from England, and from Belgium and from Turkey, and from all the other countries which have their soldiers fighting on Korea's soil. It's quite easy not to face the facts when you don't have to face them, and to debate about things in the abstract when you don't have to look at them as they are, and to deal with generalities when you have no demand to deal with particulars.

But Corporal Moullette knows what deliberate aggression and what collective security mean. Perhaps his questions and his answers may help other people to know what they're up against.

The Student-Exchange Program**EXTENSION OF REMARKS
OF****HON. J. WILLIAM FULBRIGHT**

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter which I received from a professor at the University of Oslo, in Norway, regarding the worth of the student-exchange program to Norway.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., September 11, 1951.

Senator J. W. FULBRIGHT,

United States Senate,

Washington, D. C.

MY DEAR SENATOR FULBRIGHT: May I take this opportunity while I am briefly in Washington to voice a few words of appreciation for what you have done for Norway through the Fulbright exchange program.

We in Norway have the advantages and drawbacks of being far away from everywhere. In the sciences and liberal arts, isolation is our biggest handicap. To me the world is one, and a small nation particularly depends heavily upon what is going on in other parts of the world. Furthermore the only way to mutual understanding is by personal contact whether in private life or in the life of nations.

Fulbright students and scholars have brought a stimulating and understanding into our university life which cannot be evaluated this early in the program, but their influence is already noticeable in our university policy. Within a few years I believe their effects will have become extremely widespread.

With deep appreciation for your pioneering efforts in furthering mutual understanding between nations, I am,

Yours sincerely,

TOM F. W. BARTH,

Professor of Mineralogy, University of Oslo, Oslo, Norway, (Board of Directors, United States Educational Foundation in Norway).

Bearing the Free World's Burdens**EXTENSION OF REMARKS
OF****HON. THOMAS J. LANE**

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. LANE. Mr. Speaker, with the permission of the House I want to include in the Appendix of the RECORD the following editorial from the Montreal Gazette dated August 22, 1951.

In our new world role we are apt to brush aside the opinions of other nations as coming from paupers who should have no voice in the matter. We become impatient with criticism. We feel that no matter what we do it will not be appreciated. In too many cases that fear is justified.

It is a welcome change to find one nation—our young and energetic neighbor

to the north whose spirit and progress is so akin to our own—expressing an understanding of the difficult responsibilities we have assumed in order to defend freedom in this world.

The sincerity of this editorial, coming from a true friend and neighbor, Canada, should hearten us in our endeavors.

BEARING THE FREE WORLD'S BURDENS

The United States is spending \$35,000,000,000 a year on defense. Before the end of this year the rate will probably be near to \$50,000,000,000. And what are all the allies of the United States in the North Atlantic Treaty together spending a year on defense? They are spending \$9,000,000,000.

Perhaps these figures show, more plainly than anything else, how true it is that the main hope of defending freedom is centered in the United States. Without the billions it is pouring into armaments, all hope of the Western World to preserve the freedom of independence would be gone.

But money spent upon actual armaments is only part of the contribution the United States is making today. Congress has just approved nearly \$7,500,000,000 for a foreign-aid program. It is true that the sum asked by the President was \$8,500,000,000. Yet even after the reluctant and opposing Members had done their worst in the House of Representatives and in the Senate, this very massive sum remained.

It would seem that such lavish contributions by the United States would arouse admiration and thankfulness in all who are interested in keeping the Western World in freedom. But there are those who insist, with a certain laborious peevishness, in raising two minimizing considerations.

They say, in the first place, that the United States is a great and powerful nation, and is only carrying its rightful burden. And they go on to say, in the second place, that the United States is helping others only to help herself, she is acting only in self-interest; and self-interest is not a particularly exalted motive.

But is the United States such a powerful nation that it can do such incomparable things easily? The actual figures may be strangely unexpected. The United States, huge as it may seem, has only 10 percent of the free world's population. Western Europe—together with Turkey—has a population 80 percent greater.

As for natural resources, the United States has only a fraction. Areas outside the United States not only produce 43 percent of the free world's crude petroleum, but they also produce about 70 to 80 percent of the free world's lead, zinc, tungsten, and rubber, and practically all its cobalt, manganese, nickel, tin, and wool.

It is true that the United States has been spared the actual devastation of war. But it has not been spared an enormous proportion of the cost of war, and of the lend-lease methods by which she supplied her allies as well as herself. With a relatively small population within the non-Communist world, and with many limitations in natural resources, she has so organized her industrial system that she is producing goods and services at a rate 10 percent higher than last year.

The President's Council of Economic Advisers is of the opinion that further increases will take place. It is probable that the United States, within the next 2 years, will be able to increase total output at least twice as fast as it did during the period from 1946 through the first half of 1950.

Then there is the second point raised by the critics—that the United States is only acting in her own interest. But here a pertinent question may be asked. Why should the United States consider herself in such imminent danger from totalitarian communism?

She is in danger just because she is the heart of the non-Communist world's hopes of survival. There is an old saying: "Freedom itself is an offense to tyrants." The United States inevitably assumed great international obligations when it decided to build on freedom. Such a Nation can exist only in a free world. But in assuming an increasing role in keeping the free world free, she is hardly pursuing a narrow interest.

The United States is not huge beyond all comparison, so that she can carry even massive burdens easily. She is comparatively small in relation to the non-Communist world, and carries her burdens mainly by her own vital enterprise.

Nor is the United States simply a selfish Nation, seeking only what is in her own interest. She is a Nation that has identified self-interest with freedom, and for that interest all nations cherishing their independence can feel thankful.

The tasks of the burden-bearer are never easy. Not only is there criticism from without, but there are temptations from within. There are those of the American citizenry who would minimize her obligations, offer ways of retreat from reality, or who would justify the cause of the encroacher.

The free nations of the world should give thanks that, despite all, the faith and resolution of the United States is still strong. And as she goes to her formidable and incalculable tasks, she should not be pricked by depreciation but heartened by an unmitigable cheer.

Increase of Postal Rates**EXTENSION OF REMARKS**

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. MADDEN. Mr. Speaker, the legislation calling for an increase of the postage stamps from 3 to 4 cents and the penny postal card from 1 to 2 cents has caused a great deal of criticism throughout the country.

The enclosed letter from Miss Margaret Burosh, 2030 Atchison Avenue, Whiting, Ind., is typical of the thoughts in the minds of a great majority of the American people on this increased tax.

WHITING, IND., September 13, 1951.

DEAR MR. MADDEN: When I picked up the newspapers recently and read about the bill of hiking the 3-cent stamps to 4 cents and the penny postal to 2 cents, my first thought was, "surely this isn't necessary; certainly we can keep the letters going through under a 3-cent stamp and the postals going through at 1 cent."

Many times we have family discussions during which time we talk about prices going up on merchandise, groceries, etc.

But we brought in the fact that—"At least we can still send a letter under a 3-cent stamp and a postal under just a penny."

And now, a bill that might take this little consolation away from us is coming up before the House—the bill that includes a hike of the 3-cent stamp to 4 cents and the penny postal to 2 cents.

As a voter, I voice my opinion hoping that the House of Representatives defeats this bill.

My reasons are, (1) it's unfair; (2) it's extravagant; (3) it's inconsiderate.

When I say inconsiderate, I'm speaking for the many shut-ins in the country who depend on the mails for outside communication through correspondence and hobbies—they can't afford this hike. I know this, because I'm a handicapped arthritic myself, at home with a very difficult case of arthritis and use the mails for correspondence and my hobby of prize contesting.

Of course, I'd rather partake in more active hobbies but my present condition will not let it—even though I'm taking all the latest medicines that medical research has to offer for this crippling disease—but my doctor tells me not to give up hope.

However, in the meantime, as I mentioned previously in my letter, I must turn to some sort of an indoor hobby—thus I've turned to "prize contesting" which requires a lot of postage—both 3-cent stamps and penny postals as my contest entries are sent via mail.

I know that there are many others in my predicament who have turned to this interesting, educational, and profitable hobby to derive pleasure to compensate for the many pleasures they are denied because of their ill health.

Here's hoping the House defeats the bill that calls for a 4-cent stamp to replace the 3-cent stamp and a 2-cent postal to replace the penny postal.

Let's keep our Government out of the hiking-prices parade.

Yours sincerely,

Miss MARGARET BUROSH.

Constitution Day, September 17, 1951

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared with reference to Constitution Day, September 17, 1951.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, Constitution Day, September 17, 1951, finds our country at the crossroads. The civil power of government, which the Constitution makes supreme, is in a dangerous decline. There is an ever-growing tendency to look to military men for leadership and to rely on military alliances and superweapons as the guarantors of freedom and liberty.

Constitution Day 1951 finds the United States spending untold billions of dollars in a vast armament program. Many thousands of our men and boys are fighting an undeclared war in Asia. Other thousands are under arms in Europe. Our factories and our farms are engaged in war production. Our economic life is being controlled from Washington and our sons are being drafted into the armed services. All this is being done in time of peace and in the name of liberty and freedom.

In fairness and honesty it must be pointed out that there has been no usurpation of power and authority in America by the military. Our military leaders have not forced themselves into their present place of leadership in national and international affairs. They have not placed their hands on the reins of government by force. The fact is that our military men have merely stepped in to fill a vacuum caused by a serious default in our civil leadership. The decay of

political morality which has fallen upon us has caused some of our people to turn from the civil authority of government to our military leaders in search of leadership and strength and hope in these dangerous times.

Constitution Day, September 17, 1951, finds the United States in open military alliance with 35 nations. When Greece and Turkey are admitted to the North Atlantic Pact the United States will be committed by treaty to the military defense of no less than 37 nations. In addition we are obliged to defend the freedom of Austria, the Free Territory of Trieste, Western Germany, Korea, Okinawa, and many hundreds of Pacific Islands.

It has at times been pointed out that the Constitution makes no specific mention of God. Be that as it may, it cannot be denied that the Constitution is the result of divine inspiration. Aside from the Bible and the recorded words of our prophets, the Constitution undoubtedly is the greatest documentary embodiment of the concept that human life is sacred and that each individual is the concern of God.

To some, the Constitution is a barrier. It stands between them and their political and other ambitions.

To the vast majority, however, the Constitution is a bulwark of liberty. Through many generations it will continue to give pause to those who seek to transgress upon the concept that the life and liberty of the individual are sacred and that the individual has the right to own and enjoy private property.

It seems to me that the time is at hand for us to take seriously the advice of Abraham Lincoln, who once said of the Constitution

"Let it be taught in schools, in seminaries, and in colleges, let it be written in primers, in spelling books and in almanacs, let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice. And, in short, let it become the political religion of the Nation and, in particular, a reverence for the Constitution."

The Student-Exchange Program

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter from George Vogel to the Columbia Broadcasting System regarding the exchange-of-students program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STRIKE IT RICH,

New York, N. Y., September 10, 1951.

Mr. EARL H. GAMMONS,
Columbia Broadcasting System,
Warner Building, Washington, D. C.

DEAR MR. GAMMONS: On the 29th of August Strike It Rich experienced one of the most delightful meetings it has ever had during its more than 4 years of being on the air.

Two Lafayette College freshmen, representing the Student Committee for Better International Understanding, visited our office and explained their interest in making it possible for 40 exchange students of more than 17 countries to visit Washington, the heart of our country.

Since these exchange students were going back to their respective countries, the boys

wanted to Strike It Rich so that they could win enough money to help pay for the trip to Washington and incidental expenses incurred during their 2-day stay there.

We are happy that the Colgate-Palmolive-Peet Co., sponsors of Strike It Rich, were able to afford these boys the opportunity; and, as a result, some forty-odd students will have a better idea about America and will be able to report their experiences with our country more fully.

Perhaps Senator FULBRIGHT will be interested in learning that students in Lafayette College, in Easton, Pa., have caught the true meaning of the exchange-student plan and are trying to do something in a practical way on their own to help make this program a successful one.

Anything you can do to pass this information along to Senator FULBRIGHT and other Members of Congress interested in this better international-understanding program will be greatly appreciated.

Sincerely,

GEORGE VOGEL,
Public Relations.

P S—They won \$500.

South Dakota Practices Economy and Abolishes Temporary Taxes

REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. LOVRE. Mr. Speaker, South Dakota is unique, to say the least, in the handling of her fiscal affairs. In South Dakota, in contrast with the Federal Government, we believe in the old-fashioned principles of economy and taxing on a pay-as-you-go basis.

Three years ago the people of our State voted to pay a \$28,000,000 bonus to our war veterans. To retire the bonus debt within the shortest time possible, the 1949 State legislature imposed three special taxes, and inserted an automatic repealer whereby the special taxes would be repealed as soon as sufficient funds were collected to retire the obligation.

Last month the State director of taxation informed the Governor that sufficient money had been collected under the special tax program to pay the last installment of this bonus debt.

Mr. Speaker, the Federal Government, too, imposes special taxes for special purposes. However, here the similarity between South Dakota and the Federal Government ends. October 1 will see the end of South Dakota's special taxes—a 2-mill State property tax, a 1-percent extra sales tax, and a special 3 percent sales tax on liquor, beer, and cigarettes.

Yes, South Dakota kept faith with her citizens. Instead of finding some new scheme on which to spend the \$8,000,000 obtained by the temporary taxes each year and keeping the taxes on the books, these special taxes were wiped off the books.

In South Dakota we favor a program of paying our debts and bills as they occur. We do not favor the principle of levying taxes on future generations. We believe in paying our own way. We

may be old-fashioned but we are true liberals in the true sense of the word.

For this outstanding achievement, much credit must be given to the 1949 South Dakota Republican Legislature and former Gov. George T. Mickelson, as well as the 1951 legislature and our present Governor, Sigurd Anderson.

I am sure that the following editorial taken from the Wall Street Journal of September 13 will be of interest to every Senator and Representative interested in true economy and taxing on a pay-as-you-go basis. The article reads:

POINTERS FROM PIERRE

It's news enough these days when any government finds itself with too much money, and startling news when the government meets this unwonted situation by abolishing temporary taxes instead of thinking up new ways to spend the surplus. Yet that is what is happening in South Dakota.

A few years back the State was faced with the familiar problem of paying a bonus to its war veterans. The State could have, as many States did, attacked this problem in the modern manner—which, of course, is to borrow the money and let the next generation worry about paying off the debt. Instead, the legislature decided not only to meet the obligation with special taxes, a rare but not totally novel idea, but further decided to make the taxes stiff enough to pay off the \$28,000,000 bonus quickly. The idea seemed to be that the people who had so generously voted the bonus at a special election ought to be the ones to pay for it.

Well, the other day in Pierre, the State's capital, the Governor was informed that all the money to pay the bonus was at hand. This means that in less than 3 years the entire transaction has been completed, a record remarkable enough by itself.

But the wonders didn't stop there. With the bonus bill paid, the State government would have an extra \$8,000,000 plus each year which it could spend if it kept the temporary taxes. No one would have been particularly surprised had the legislature decided to do this. In many places some temporary taxes are as old as some of those "temporary" buildings built in World War I. Governments never have difficulty thinking up very worth-while projects on which to spend any extra money found lying around.

But in South Dakota the temporary taxes are just that. On October 1 there will be repealed a 2-mill State property tax, a 1 percent extra sales tax, and a special 3-percent sales tax on liquor, beer, and cigarettes.

The Daily Argus-Leader of Sioux Falls, commenting with understandable pride on this achievement, remarks that "perhaps we're a bit old-fashioned in South Dakota." Well, if this be old-fashioned, we can't avoid a bit of nostalgia over the news from Pierre as we contemplate the news from Washington of more modern manners.

The Taft-Hartley Act and the Copper Strike

EXTENSION OF REMARKS OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. TAFT. Mr. President, I ask unanimous consent to have embodied in the Appendix of the RECORD an editorial entitled "A Friend in Need," published in

the American Metal Market for Saturday, September 8.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FRIEND IN NEED

When President Truman eventually decided to invoke provisions of the Taft-Hartley Act in the copper strike, appropriate steps were taken with commendable speed. The matter was referred to the three-man fact-finding committee on Thursday of last week, and notwithstanding the intervention of the Labor Day week end, the report was delivered at the White House by last Tuesday, on schedule. This was fast work.

On the same day, though by that time he had gone to San Francisco, the President instructed the Attorney General to seek a Federal court injunction which would require the workers to return to their jobs for an 80-day "cooling off" period. A temporary restraining order was issued the next day by the United States court in Denver, and by Thursday the strikers began drifting back to work, as, by that time, they and their leaders knew what was coming. The return movement has since gathered momentum, although, with the week half gone, or more, by the time the legal machinery could operate effectively, it has been evident over the last few days that volume operations could not be resumed before next Monday. This delay could have been—and was—foreseen by observers.

Gratifying as this decisive and productive action has proved to be, it does not in the least detract from the seriousness of the stoppage, the utter lack of justification for it, or the callous indifference to the welfare of the country displayed by those union officials who brought it about. As the fact-finding board reported: "This country needs copper. It needs every pound that can be produced. It needs that copper now—not in a few weeks or a few months, but now." Speaking to the press on Thursday, Defense Mobilizer Charles E. Wilson described the strike as "very serious—a terrible thing to occur when copper already is in short supply. It couldn't have happened at a worse time."

These are harsh words, but they are fully justified. The stringency in copper was as well known to the so-called leaders who brought about this strike as it was to those most intimately concerned with the particulars of our accumulated reserves and our rate of production and consumption, for on the very eve of this reprehensible action, the President had been obliged to authorize the release of as much as 25,000 tons from the strategic stockpile in order to maintain the flow of material in volume sufficient to prevent hampering the defense effort. It is incredible that union leaders should not have known this.

In fairness to the CIO and A. F. of L., it should be acknowledged that they did not actively promote the tie-up. In many instances, their members were absent from their posts because of picketing by other unions, and because of the crippling of essential facilities by the strikers, resulting in the paralysis of other plant activities. But, by the same token, let it be observed that the notorious mine-mill group lived up to the unenviable reputation it has built for itself and that by the brazen insolence of its leadership it has invited the conclusion that its indifference to the consequences of its action was studied and its paralysis of industry motivated by the knowledge of its power plus a readiness to place selfish purposes above national requirements.

Once again the country has been given a graphic illustration of the futility of attempting to deal with left-wing outfits of suspicious background as one would deal with the normal country-loving American

citizen. Once again it has been demonstrated that only the power of force—legal force or military force as the occasion may require—is respected by them, and that the only appropriate course of action when contending with this faction is to hit at once, with both barrels. Had such a procedure been adopted when it first became obvious that no other would serve the interest of the Nation, it is probable that at least one of the precious 2 weeks' production which has been lost, could have been saved.

But even as we look upon the disturbing aspects of this discreditable affair, let us not overlook its brighter side. It is not perversity which suggests that, while we deplore what has taken place, we might the better realize how fortunate we are by contemplating what might have been. Just let us ask ourselves what would be our predicament today if the Wagner Act were still the law of the land? In our disgust with the action taken by the leaders of the mine-mill group, in our impatience with the authorities for their failure sooner to invoke the most appropriate measure which they had at their command for dealing with the situation, let us not undervalue the great service to the public interest which the Taft-Hartley Act performs, at the very hour of the public's greatest need.

One of the very great virtues of the Taft-Hartley Act is the willingness of its sponsors to acknowledge its imperfections. Another of its great attributes is the unreasoning denunciation which has been heaped upon it because it embodies provisions which disinterested third parties have, from the start, recognized as impartial and fair and in the public interest. It has been this popular recognition of the basic even-tempered fairness of the act—despite all imperfections—which has caused the millions to rally to its support when it has been under assault from interested parties, determined at all cost to make the law serve them, rather than the Nation.

Paradoxically, the more bitterly the act has been attacked, the more clearly has its utility, even its indispensability, been repeatedly established by excesses committed by those who condemn it. Once again, in this grave situation, its great value as an instrument for public good has been confirmed by the unpatriotic immobilization of the copper and allied industries at the worst possible time. Once again it has proved itself the invaluable shotgun behind the door, the one weapon we have to prevent paralysis of essential services at critical junctures. To paraphrase the deserved tribute paid that uncompromising exponent of rugged integrity, Grover Cleveland, we love it for the enemies it has made. It has proved, once again, to be the country's and the public's friend in need.

Portland, Oreg., Airport Ready for Largest Planes

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. ANGELL. Mr. Speaker, during the short House recess I visited my home district and arrived and took off from the Portland Airport. Recently the city of Portland celebrated the completion of a new runway at the Portland Airport which is longer than any other municipal or commercial airport runway on the west coast except the one at San

Francisco. It was a \$2,000,000 project and will permit direct calls to be made by the largest trans-Pacific and trans-continental planes on routes already established to and from Portland. It is of sufficient length to permit Air Force B-52's and C-124's as well as the Globemasters to operate from this field.

There is now direct service between Portland and Alaska and Portland and the Hawaiian Islands, and the airport is now rightfully known as an international airport. Its location is an excellent one in that it is situated almost within the city limits and the central downtown area may be reached from the airport within 30 minutes or less.

I include as a part of these remarks an editorial which recently appeared in the Portland Oregonian describing this new facility:

READY FOR LARGEST PLANES

Portland does not have anything comparable to the splendid, \$3,000,000 administration building at the Seattle-Tacoma Airport, but the 9,000-foot runway to be dedicated today at the Portland International Airport is 1,500 feet longer than the Seattle-Tacoma runways and only 70 feet shorter than San Francisco's longest. It is longer than any other municipal or commercial airport runway, aside from San Francisco's, on the west coast.

This \$2,000,000 project, completed at last, merely brings the Portland field up to its immediate demands. The largest trans-Pacific and transcontinental planes on routes already established from Portland may now make direct calls. The runway is long enough to accommodate the Air Force's B-52 and the C-124, or Globemaster, which carries 200 combat troops and will be opened to public inspection today, as will be a Northwestern Airlines stratocruiser.

With the addition of Alaska services to its continental and Hawaii lines, Portland moves ahead in long-distance airplane freight and passenger transportation and rightfully adds the word "international" to its airport title. Our port is conveniently situated on the fringe of the city, unlike the new Seattle-Tacoma field. We are envious, however, of the northern port's dazzling and complete facilities for passengers and airlines.

Hawaii's Youth Favors Statehood

EXTENSION OF REMARKS OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to offer for publication essays by Winnet Ho and Walter Pollack, both age 15, and sophomores at McKinley High School, which won for them a visit to Washington in a contest conducted by the Honolulu Junior Chamber of Commerce.

These essays express very convincingly the attitude of Hawaii's youth toward statehood for Hawaii:

HAWAII AS A STATE
(By Winnet Ho)

I think Hawaii should become the forty-ninth State because the people living in Hawaii are just as American as the people living in the 48 States. I believe that all

Americans should have the same rights and opportunities. God created everyone equal. We as Americans should keep that ideal burning with all the goodness in it. We the people of Hawaii, not a State, do not have the same rights and privileges as people in the States. For example, we do not have the right to vote for our President or Governor. We do not have Senators nor Representatives to represent us in Congress. Since the Hawaiian Islands are known for their importance and valuable position as a front line of defense, don't you think we should have the same basic American rights as do the people of the States to form our Government?

Personally speaking, I think we should become a State because of the crisis we are facing today. The world is in need of friendship, brotherhood, love, understanding, and good aloha spirit. We have all that and much more to offer. We here in the islands are a living example of these principles and hence we have much to contribute to the people of the world if we become the forty-ninth State.

Educationally speaking, our young people are all seeking opportunities for education and we make the best of these opportunities to develop ourselves into good American citizens. Our educational standards are equal to those of the schools in some States, and I believe are even better than the standards of schools in many States.

Our youth is a living example of democracy at work. We young people show our influence in leadership, participation in school and civic affairs. We assume our responsibilities and are promoting good in our deeds and action just as are the young people in the present 48 States.

HAWAII SHOULD BE A STATE

(By Walter Pollack)

I firmly believe that Hawaii should become a State. Most of all we want to vote for the President and vote for our own Governor. I think we are ready to take the responsibility of statehood. Hawaii has a growing population and we have contributed much in the way of agricultural products to the 48 States.

In Hawaii everyone looks upon one another as an individual believing in freedom and most of all we are against communism. We must learn to get along with everyone and keep them as our friends. We should not hold a grudge against anyone for his nationality but help him when we can.

We the people of the Hawaiian Islands feel we will prove our equality if given the rights of statehood. We were all created equal and no one is better than the other. We will fight, as we did in World War II for peace and freedom. Each State wants lasting peace and freedom and so do we. For the old saying goes, "United we stand, divided we fall," which is still true to this day.

Hawaii is willing to share in defending against communism, too, for the welfare of the United States. Hawaii is an important link in America's defense. So that is why I think that Hawaii should have statehood.

The First Scandal

EXTENSION OF REMARKS OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. GOODWIN. Mr. Speaker, we get the sort of government the people vote for. The last individuals to complain at

what goes on in Washington should be those who fail to express themselves at the ballot box. It seems almost incomprehensible that any citizen genuinely interested in his Government and having the right to vote should not take it to be a part of his responsibility as a good American to make certain that his right of franchise is exercised by him on election day. In this connection under leave to extend my remarks, I include the following editorial from the Medford (Mass.) Mercury of September 9, 1951:

THE FIRST SCANDAL

So much scandal is coming out of Washington these days, it is right that the original sin should be given its proper place and weight. Chancellor Albert C. Jacobs, of the University of Denver, used it as his text at the summer commencement.

"It is, I think, a scandal that so few voters have seen fit to participate in our national elections," the chancellor said. "It is a shameful fact that nonvoting is increasing; that as the number of potential voters rises, the percentage of participation in elections declines."

Yes; the scandals can all be traced to the shameful refusal of citizens to exercise their right to vote or, when voting, of exercising their intelligence to pick men of integrity and honor for public office.

New Postal Rates

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include therein a very much worth-while editorial which appeared in the Sunday, September 9, issue of the Springfield News-Sun entitled "New Postal Rates." This editorial pungently and properly points out the need for greater efficiency and economy in the operation of the Post Office Department.

NEW POSTAL RATES

The Senate has passed and sent to the House a bill which virtually doubles the cost of postal service to the public. Post cards will require 2 cents postage; letters will be 4 cents an ounce, and all other mailing charges will be increased when the House adopts the measure, as it is expected to do.

The Post Office Department has been operating "in the red" and undoubtedly some increases in its revenue are advisable, but one wonders whether the Congress should not insist that the Department operate in the future on a more business-like basis.

The Hoover report made a great many recommendations for increased efficiency in the Department, but few, if any, of these recommendations were ever adopted.

Here in Springfield are a few examples of wasted money insofar as the Post Office Department itself is concerned. Some time ago, a new elevator was installed in the Post Office building. This elevator was paid for and is operated by the Post Office Department. Yet it is not used for post office business but rather for the benefit of the other Federal tenants in the structure—Internal Revenue Department, Social Security, Army and Navy, and other Federal departments who enjoy free rent, heat, and main-

tenance at the expense of the Post Office Department appropriations.

Then there is that new flagpole. Perhaps it did not cost very much—say \$300—but it was so unnecessary in view of the fact that the Springfield Post Office previously had a quite satisfactory flagpole atop of the structure and there was no need whatsoever for installing the new one.

In the lobby of the local post office is a stamp-sales machine. A private business would have installed a precancelling machine for the customers which would have saved time "behind the scenes," but not the Post Office Department. It installed a machine that merely sells stamps and that only to those who happen to have the exact change. Hence it does not relieve the window clerks materially.

These are just a few samples but the Hoover report showed that many, many similar wastes may be found throughout the Nation.

Springfield also wonders whether, the proposed upping of the air-mail rate to 8 cents an ounce, it may expect any improvement in the air-mail (?) service to and from Springfield. At present, such service is a joke so far as any but quite distant points are concerned. So far, any efforts to get any improvement in the service gain the brush-off from higher postal officials.

So it is again suggested that in giving the Post Office Department more money from the public, the Congress take a good and long look at the Department's methods of operation.

News in Medicine

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend by remarks in the Record, I am taking the liberty to submit several articles announcing discoveries in the treatment of some of the terrible diseases suffered by our people. Mr. Speaker, I believe that this information should have widespread publicity, and if only a few people read about these scientific discoveries and obtain relief or are cured, I think it will well be worth the cost of printing same in the CONGRESSIONAL RECORD. The articles follow:

[From the New Orleans Item of September 12, 1951]

NEWS IN MEDICINE CANCER

CHICAGO.—A specialist said today a revolutionary method has been devised for detecting hidden cancer as much as 5 to 7 years before it reaches the large tumor stage or causes suspicious symptoms.

When internal cancer advances to the stage of causing distress, only a small percentage of sufferers can be saved from death.

The detection of latent or previsual cancer is done by cytology. This is a method where organs or other areas of the body examined are scraped or swabbed, and the surface cells obtained are examined under a microscope.

Dr. J. Ernest Ayre of Miami, Fla., director of the Cancer Cytology Center of the Dade County Cancer Institute, said the procedure is so simple and painless that every doctor's office can become a cancer detection center.

In a paper to the sixteenth annual assembly of the United States and Canadian chapters of the International College of Surgeons he said:

"Cancer of the uterus, cancer of the lung, cancer of the prostate, cancer of the larynx, and throat, and other forms can be diagnosed with great accuracy by using the cytology test.

"In cancer of the cervix and lungs, cytology offers earlier diagnosis than any other known method.

"Cytology is the only method known to medical science to enable the discovery and location of a cancer before it is visible or causes symptoms."

He said there have been many cases in which cancer cells have been scraped from a cervix that appears completely normal, and that the disease was completely curable at that stage.

It would have required from 5 to 7 years in some of these cases, he added, for the cancer to grow enough to be readily visible or cause symptoms. He said:

"It is now felt that in this type of malignant disease—cancer of the uterus, which up till now has claimed 26,000 lives a year—almost all could be saved if a cervical cytology test each year becomes part of their health examinations."

ARTHRITIS

ST. LOUIS.—A new treatment for the stubborn arthritis of old people—against which even cortisone has had little effect—was announced today by a Brooklyn doctor.

Dr. W. S. Collens told the Second International Gerontological Congress the substance, an extract derived from the liver of pregnant cows, is still experimental and not yet available for general use.

But he declared it appears to be capable of bringing relief of pain and stiffness and restoring normal joint movement in many cases of the ailment known as hypertrophic osteoarthritis.

He said the substance first was developed in his laboratories as a possible material for the control of a painful neuritic condition which sometimes occurs as a complication of diabetes.

It proved more effective against that condition than anything previously tried, he said, adding that by a happy accident, he and his colleagues got a lead on its possible use against osteoarthritis.

The tip developed from the alertness of a woman diabetic who reported that while being treated for the neuritic complication of that disease, she had obtained relief from a long-standing joint limitation in her right hand. The doctors determined that she had been suffering from osteoarthritis.

Osteoarthritis, which affects 6,000,000 of the Nation's estimated 7,000,000 arthritis sufferers, is the degenerative type which occurs principally in elderly people.

It is marked by bony deposits in the joints, producing marked disability.

It is distinguished from rheumatoid arthritis in which there is an actual destruction of the joints.

The rheumatoid type principally affects younger people, but the drug cortisone has demonstrated great promise in its control.

Cortisone, however, has so far shown little effect on osteoarthritis.

DIABETES

BALTIMORE.—Many a doctor has had to leave the delivery room and face a grief-stricken husband with—"I'm sorry, Rh, or diabetes."

Now, perhaps those times are limited. For science is offering a shining ray of hope that many of those infants may be saved through a direct injection of vitamin E.

It hasn't been tried yet—and won't be, except where a baby cannot possibly be saved by other means. But one (unnamed) hospital is said to be ready to try it.

Dr. Karl E. Mason, professor of anatomy at the University of Rochester Medical School, last night explained his research into the subject at the concluding session of a symposium of 150 of the Nation's leading biochemists.

The symposium was presented in honor of Dr. Elmer V. McCollum of Johns Hopkins University, hailed as the "father of nutrition" and discoverer of vitamins A and D. It was sponsored by the Robert Gould Research Foundation of Cincinnati and Johns Hopkins.

Babies dying because of the Rh factor—even after transfusion—and often babies of diabetic mothers show less vitamin E present than in normal babies.

Furthermore, Dr. Mason said, babies dying because of the Rh factor show a "picture similar to death produced in experimental animals through the elimination of vitamin E in the diet."

(The so-called Rh factor results when the properties of the father's and mother's blood differ in such a way that the combination many times causes death to the child. In some instances, transfusions after birth can save its life, but there is no assurance.)

Among other things, vitamin E is found in whole-grain cereals, egg yolks, meat, and milk.

Normal babies, Dr. Mason said, are born with a slight vitamin E deficiency, compared with adults. But mother's milk shows a supply of vitamin E five times as plentiful as the amount found in cow's milk.

This naturally led to the assumption that bottle-fed babies should be given extra supplies of vitamin E. But only under the direction of a doctor, he hastened to add.

[From the New York Times of September 9, 1951]

MAJOR GAINS SHOWN IN FIGHT AGAINST INFANTILE PARALYSIS—WORLD SESSION OF SCIENTISTS IN DENMARK NOTES IMPROVEMENTS IN TREATMENTS

(By Howard A. Rusk, M. D.)

COPENHAGEN.—Scientists and clinicians met here last week at the second International Poliomyelitis Conference to take inventory of the status of the global attack now being waged against infantile paralysis. The conclusions of the 5-day conference, which was arranged by the Danish National Foundation for Infantile Paralysis and the National Foundation for Infantile Paralysis of the United States, were that although the long-range objective of a single vaccine that would provide protection from poliomyelitis has not been achieved prospects are becoming increasingly hopeful. It was noted that as a result of improved treatment methods and rehabilitation there is now less physical disability from this disease than ever before.

In the first comprehensive statement made public to date from a huge 3-year research project set up 2 years ago by the national foundation in the United States, Dr. Jonas E. Salk, of the University of Pittsburgh School of Medicine, reported that thus far only three distinct types of poliomyelitis virus have been found. The first of these was discovered in 1909, but it was not until 1931 that the existence of more than one type was suggested and it was 1949 before it was proven.

Typing of the various virus is one of the fundamental problems poliomyelitis investigators face, for the number of types and their characteristics must be determined if successful vaccine is to be developed. Because of the necessity for standardizing techniques in virus research so that data developed in one part of the world can be reliably compared with results obtained elsewhere, most scientific papers in the 5-day session that ended Friday dealt with these problems. The magnitude of the research

effort was evident from the fact that 24 papers on these subjects were presented by scientists from 10 nations.

NEW DETECTION TEST ANNOUNCED

One of the most important announcements of the meeting was by Dr. Jordi Casals of the Rockefeller Institute for Medical Research, New York, concerning a new test for the detection of infection with polio virus. The new test, which is on the complement fixation type similar to the Wassermann test for syphilis, still is in the experimental stage but results thus far have raised hopes that a simple test for polio may be developed that can be put into general use by the medical profession. At present the positive and certain detection of polio virus depends upon the inoculation of rhesus monkeys with the suspected material. If it is polio virus, the monkeys develop paralysis.

The importance of a simple test was stressed by Dr. Robert Debre, professor of pediatrics at the Sorbonne in Paris, who told the Sorbonne in Paris, who told the conference that many diseases ranging from arthritis to pneumonia can be mistaken for infantile paralysis. He said that in a series of 509 cases sent to the center for acute poliomyelitis of the Paris hospital for sick children with a diagnosis of polio, the diagnosis proved wrong in 71 cases.

Methods in the care and treatment of polio patients were presented primarily by a series of closed circuit television programs presented by teams of demonstrators from Denmark and the United States three times daily. These teams of physicians, nurses, and physical therapists presented practical demonstrations on nursing care, use of the respirator, muscle testing and re-education, walking, training, and rehabilitation. The television demonstrations, which were made possible by E. R. Squibb & Sons, Inc., and produced with Radio Corporation of America equipment and engineers, attracted great attention as they were the first television programs seen by most of the Danes and many participants from other nations.

PROGRAM VIEWED BY PUBLIC

The programs also were viewed by the public, marking the first time that this technique had been used for general public health education. Equalling the Danes' interest in television was the interest of the visitors in the educational exhibits presented for the public. With their great ingenuity and excellent craftsmanship, the Danes utilized modern abstract art to present scientific material in a dramatic manner, which caused many visitors to term it the most striking health education exhibit they had ever seen.

Concurrently with the poliomyelitis conference, 150 physical therapists from 15 nations met to form a new world confederation for physical therapy. The new professional organization will provide for an international exchange of technical data on physical therapy, encourage standardization of training and certification and develop methods whereby each of the nations may recruit and train more therapists.

Miss Mary E. Switzer, Director of the United States Office of Vocational Rehabilitation, told this group that the present world shortage of physical therapists is the greatest single obstacle to the immediate development of additional rehabilitation services for the handicapped and chronically ill.

Delegates to the meeting in Copenhagen were deeply impressed with both the quality and scope of health and welfare services, particularly in tuberculosis, available to all Danish citizens and by the Danes' love of fun. As one American visitor commented, Denmark proves that social betterment and fun can be combined. This is one of many lessons the world could learn profitably from little Denmark.

[From the New York Herald Tribune of August 27, 1951]

DOCTORS REPORT MENINGITIS AID BY TERRAMYCIN—TWO CHICAGOANS ASSERT 14 CASES, CONSECUTIVELY TREATED, ENDED IN CURES

Successful treatment of 15 consecutive cerebro-spinal meningitis cases with the antibiotic terramycin is reported by two Chicago doctors in the current issue of the Journal of Pediatrics.

Dr. Archibald L. Hoyne and Dr. Emmanuel R. Riff, of the Cook County Contagious Disease Hospital, in Chicago, report in their article that "recovery was complete" in all 14 patients after periods of treatment by terramycin which averaged 3 days less than has been usual with sulfonamide treatment. The doctors conclude that terramycin may prove to be the ideal drug for combating meningococcal and influenzal infections.

The terramycin treatments, they noted, were free of the unpleasant reactions, commonly suffered by victims of the disease—an epidemic form of meningitis—who have been treated with sulfa drugs or other antibiotics.

The doctors reported relative success in using terramycin in the treatment of two other types of meningitis—pneumococcal and influenzal. With the antibiotic the only drug administered, five or six pneumococcal meningitis patients and all of three influenzal meningitis patients recovered. The one death, they said, was due to bilateral pneumonia.

NEW, OLD DRUGS TEAMED UP TO CHASE A COLD—TWO FILIPINO SCIENTISTS REPORT REMEDY

NEW YORK, September 10 —A new common-cold remedy, reported good even for old colds, was announced to the International Congress of Pure and Applied Chemistry today.

This new drug strikes three ways. It hits at the virus which doctors say causes colds, at the histamines which doctors said aggravate colds, and at the germs which usually come swarming in to make the misery worse.

FILIPINO SCIENTISTS

The report was by two Filipino scientists, Eusebio Y. Garcia, a physician, and Ramon Acevedo. Garcia is in the Binan Medical Research Clinic, Laguna. Acevedo is in the Araneta Institute of Agriculture at Malabon, Rizal. Neither came to the congress, but their report is printed in the official abstracts and is part of the day's proceedings.

They said their remedy was 95 percent effective on 200 common colds. Recovery came on the average after 3 days' treatment, except old, or third-stage colds, when treatment sometimes went for 5 days. On second-stage colds, which means after the first day, they said headaches disappeared in 10 to 15 minutes. Stuffed-up nasal passages became easier for breathing after a few minutes.

NEW AND OLD DRUGS

The remedy is a new synthetic drug plus an old sulfa drug. The new one is dimethylguanidine, which they said was synthesized in their laboratories.

It was made as one of a large number of drugs to combat malaria. It was tried on common colds because it had antiviral effects, a mild antihistamine effect, and a mild pain-relieving effect.

The added sulfa drug is sodium sulfathiazole. This sulfa has been used in the United States for many years for common colds on the theory that it kills the germs which usually multiply in colds.

The report said this same three-way drug was tried on the virus colds of chickens. On 700 chickens the remedy gave apparent cures 100 percent. It is given to humans both by mouth and by hypodermic.

United States Chamber Makes Telling Presentation of Our Federal Debt

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which gives a clear picture of the reckless financial path our country has been following for the past 22 years. The article entitled "United States Chamber Makes Telling Presentation of Our Federal Debt," appeared in the Friday, September 14, Watertown Public Opinion in a Down the Main Drag column by Alex Johnson:

DOWN THE MAIN DRAG—UNITED STATES CHAMBER MAKES TELLING PRESENTATION OF OUR FEDERAL DEBT

(By Alex Johnson)

The United States Chamber of Commerce has put together one of the most effective presentations of the enormity of the Federal debt I've seen. It's a simple bar graph but the tale it tells is tremendous.

It shows that in 1869, after the Civil War, the United States debt was \$2,200,000,000, a mere bag of shells. In 1919, right after the First World War, it was up to \$25,200,000,000, still just pocket money.

By dint of prosperity and smart management, this had been squeezed down to \$16,600,000,000 in 1929. Came the thirties, and the alphabet soup and by 1939 it had leaped to \$39,900,000,000 and you remember how we used to choke whenever anybody mentioned it.

But now it's \$255,000,000,000.

Looking at it another way:

In 1869, the Federal debt measured one-eighth of an inch. In 1939 it measured 2 3/4 inches. Now it stretches out to 1 foot, 5 1/2 inches.

As an average United States family, your share of this is \$5,640.

Nicolai Lenin: "We shall force the United States to spend itself into destruction."

The Chamber also kicks up some interesting dope on the upcoming Federal budget for 1952: seventy-one billion.

Your bill for this is \$1,589. As the Chamber says, "\$71,000,000,000 is a lot of money. Try to picture a pile of a million \$1 bills. Now try to imagine 71 thousand other piles just like it.

"It's hard to imagine that much money, isn't it? Shucks, it's hard to imagine just that \$1,589 that's my share.

"Is this spending necessary?" asks the Chamber.

"A lot of it is. The Government does a great many things that we all think are good. For example, a big chunk of that \$71,000,000,000 is going to build up our national defense."

I'll go along with that, gladly, and so will you. The wolves are howling at every door we have and they're no cream puff enemies.

"But," says the United States Chamber, "there's a lot of Government spending that isn't needed—especially right now in a national emergency."

For instance, it adds, one Government agency is doing research to find out how long a raccoon lives. It could better spend its time trying to find out how long a taxpayer can survive.

Another agency buys corn from the farmer and then lets the farmer buy corn for his

own use on the open market at half what the Government gives him—"lets" him buy it, mind you.

Another agency invested our dough in a rattlesnake farm which went broke.

I'm trying to think up a joke about rattlesnakes but it won't come.

The United States Chamber of Commerce notes that the Hoover commission showed how Government agencies could save as much as \$7,000,000,000 of our money every year just by cutting out waste and adopting a more sensible organization.

But, instead of that, the Federal Government has grown so fast lately that if we only went back to the Government we had in 1948—3 years ago—we could save another \$7,000,000,000.

Who's going to pay the bill? You. Nobody else but.

"You will pay these new taxes and the old ones," says the Chamber, "every time you see a movie or drink a bottle of beer or smoke a cigarette or use the telephone. You will pay pennies here and nickels there. You won't even know most of the time that you are paying taxes because they are included in the prices of the things you buy."

And all these things don't include the March 15 headache. You've paid all year long. Then you pay the rest.

Don't misunderstand. If it's gotta be, it's gotta. If it means preservation and progress and efficient administration in Government, okay.

If it means quality goods for our tax investment, fine. But so much of it is going for junk.

William N. Oatis

EXTENSION OF REMARKS
OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Monday, September 17, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I submit a resolution from the Marion, Ind., Aerie, No. 227, of the Fraternal Order of Eagles, in behalf of William N. Oatis:

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press Bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation; and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representatives, or trusted legal counsel; and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct, and verified information," which is the definition of the work of a free press; and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being; and

Whereas, by its action, the Communist-dominated Czech government showed its scorn for the principle of freedom of in-

formation and its hatred for our free world; and

Whereas representatives of the Soviet News Agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of government, at which often much off-the-record information is discussed: Now, therefore, be it

Resolved, That Marion Aerie, No. 227, of the Fraternal Order of Eagles urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executives of the Associated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world, and be it further

Resolved, That Aerie, No. 227, of the Fraternal Order of Eagles urges the Federal Government to bar the correspondents from the Soviet News Agency Tass as well as all satellite nation correspondents from official government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Press and Farm Reaction to the Family
Farm Policy Review

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Monday, September 17, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting various articles from the Virginia press dealing with the family farm policy review.

I particularly desire to call the attention of the House to the resolution adopted by the farmers of Rappahannock County, Va. Rappahannock is a small county and its citizens have always been known for their intelligence, courage, and independence.

The resolution is as follows:

[From the Rappahannock (Va.) News of September 13, 1951]

The full content of the committee's report follows:

"Whereas the farmers of Rappahannock County, Va., have held several meetings in connection with the Family Farm Policy Review sponsored by the United States Department of Agriculture; and

"Whereas at the last county-wide meeting two farmers of each Magisterial District were elected as a committee to bring to another county-wide meeting recommendations concerning this review; and

"Whereas the report of the Committee has been presented to the meeting; and

"Whereas the farmers of Rappahannock County feel that the idea of having the farmers of the United States give their views is good, the method used in conducting this survey was not in accordance with democratic process, in that it was conducted principally by paid Federal employees; and

"Whereas it appears that the recommendations contained in the review in every instance call for increased expenditure, increased personnel and broadening of powers

of the United States Department of Agriculture, and

"Whereas we feel that the concentration of further authority over agriculture in the United States Department of Agriculture is unwise; and

"Whereas in this time of impending war, with an enormous Federal indebtedness and the highest tax in our history, it is felt that any unnecessary increase in non-defense spending is unsound; and

"Whereas we feel that the United States Department of Agriculture should operate as far as is possible through our State extension service, and other State facilities, other than directly with the farmer.

"Now, therefore, we the farmers of Rappahannock County, Va., represented at this meeting do hereby go on record as strenuously objecting to the increasing of the activities of the United States Department of Agriculture and recommended a contraction rather than expansion of its activities, and further that we vigorously record our protest of the method used in this survey, of obtaining reaction to the report and its recommendations; and further be it

Resolved, That we recommend that the United States Department of Agriculture be decentralized, and that during these strenuous times that the Government spend only for necessities and defense spending, further be it

Resolved, That farmers as a rule are landowners, hence interested in the general welfare of the country, and to this is attributed the fact that rural sections have produced a large percentage of our statesmen. We are firm believers in our rights of life, liberty, and the pursuit of happiness. At the present we, along with the majority of our fellow countrymen have been convinced that life and liberty are both endangered. Hence we have favored our present defense program and are willing to help pay for it. However, since this program will take probably 20 percent of the national income for several years, we are willing to deprive ourselves of other less-necessary things until our defense costs are paid, and until we are annually making a reduction in our national debt. We are willing to be the first group to make sacrifices and urge other groups to unselfishly follow us.

"Therefore, our general answer to these questions pertaining to the family farm is that the Department of Agriculture practice all possible economies until our defense problem is solved. Our recommendations are:

"1. The Agriculture Research Administration:

"I. Research: Present program adequate.

"II. Pest control: Present program adequate, possibly need further work on effect of germ warfare.

"III. Meat Inspection: Adequate.

"2. Bureau of Agricultural Economics:

"I. Agricultural estimates: Continue on present scale.

"II. Economic Investigation: Discontinue.

"3 The Cooperative Extension Service: No expansion recommended.

"4. The Office of Information: No expansion recommended; tie in with 1 and 2 above and economize.

"5. Production and Marketing Administration:

"I. Commodity Credit Corporation: Curtail 50 percent.

"II. ACF: Curtail 10 percent and reduce maximum to a farmer by 10 percent.

"III. Production adjustment program: Abolish for duration of present emergency.

"IV. Price support: Abolish.

"V. Program for stabilization of sugar production and marketing: Curtail 10 percent.

"VI. International commodity agreement program: Curtail 10 percent.

"VII. Surplus removal, export and diversion programs: Curtail 10 percent.

"VIII. Marketing agreement and order programs: Curtail 10 percent.

"IX. Marketing research: Abolish—handle by ARA

"X. Market News: Abolish—handle by BAE

"XI. Standardization, grading and inspection of farm products: Curtail 10 percent.

"XII. Marketing regulatory laws: no expansion.

"XIII. State matched-fund marketing service work: Abolish—let BAE handle it.

"XIV. Transportation rates and services: Curtail 10 percent.

"XV. Defense food program: Abolish—let extension handle necessary information in time of need.

"XVI. Other programs:

"(a) Supply program: Curtail 25 percent in administration cost.

"(b) Foreign purchase program: Curtail 25 percent administration cost.

"6. Soil Conservation Service: Render technical assistance where requested, work closely with county agent. No expansion except to move into new counties if requested by them.

"7. The Forest Service: No. expansion necessary for present emergency.

"8. Farm Credit Administration: Curtailment rather than expansion is recommended, avoid conflict with local banks and look more toward cooperation with them."

Article from the Thursday, August 30, issue of the Richmond Times-Dispatch:

**CULPEPER FARMERS RAP USDA POLICIES—
RESOLUTIONS RECENTLY ADOPTED WITH
ONLY ONE DISSENTING VOTE**

"Whereas the farmers of Culpeper County have been requested, on short notice, to express approval or disapproval of changes in United States Department of Agriculture programs outlined in a 121-page booklet, of which, first, there are very few copies in the county; second, if there had been more copies, few farmers would have had the time to read; third, many, if they had read it, would have been confused by the broad scope of subjects covered. And we strenuously object to the use of funds, appropriated by the Congress for the benefit of agriculture, by paid employees in an attempt to instill into the minds of our farm people official thinking of the Department of Agriculture; and then to have this echoed back through these same paid employees as grass roots thinking.

"Whereas we believe that many of the services now being made available by the Federal Government to farmers are good and worthwhile. Some of these, we believe, have served their purpose and are no longer required. However, we believe any of these kept in operation should be channeled through appropriate, presently constituted State agricultural agencies and county governmental bodies, such as the land-grant college, State department of agriculture, and county board of supervisors. We disapprove of the political potential of the present Department of Agriculture program and believe that the recommendations set forth in the Family Farmer Policy Review are calculated to enhance this potential;

"Whereas the present trend of the United States Department of Agriculture of centralization of authority in Washington and of continual increase in personnel points significantly to patterns followed by other countries whose economic and social status is much lower than ours and could easily lead to socialism and then to communism. This trend also results in overlapping and duplication of effort at the expense of the taxpayers;

"Whereas we believe that the present emergency situation in which the Nation now finds itself calls for the strictest kind

of economy and definite reduction in the expenditures of all nondefense agencies in the Federal Government. And we in agriculture are willing to take our proportionate share of such cuts as may be required in order that the Nation may remain on a sound financial basis: therefore be it

"Resolved, That the farmers and other individuals of Culpeper County, Va., represented at this meeting called by the agricultural mobilization committee, headed by the Production and Marketing Administration in this State do wish to be recorded as opposing the methods of the Department of Agriculture in this procedure, and that they vigorously oppose any expansion of the activities of the United States Department of Agriculture, and recommend a curtailment rather than an enlargement of such activities."

Editorial comment from the Saturday, September 1, issue of the Winchester Evening Star:

CULPEPER FARMERS ARE FIGHTING MAD

Our hat is off to the farmers of Culpeper County.

At a meeting last week they went on record as "strenuously objecting" to the use of public funds for propaganda purposes "to instill into the minds of our farm people official thinking of the Department of Agriculture, and then to have this echoed back through these same paid Agriculture Department employees as 'grass roots' thinking." The farmers further recommended strongly that "the United States Department of Agriculture be decentralized and that the administration of the affairs of agriculture in each State be done by and through any existing appropriate State and county agency."

The immediate cause of the resolution of the Culpeper farmers was a 121-page booklet put out by the Department of Agriculture with the purpose, to quote page 24, "to bring about changes in people, their attitudes, abilities, and in turn their actions."

The Culpeper farmers were asked to endorse the program outlined in the booklet. The farmers replied that, first, there were few booklets available; secondly, if there had been more copies, few farmers would have had time to read it; and thirdly, many if they had read it would have been confused by the broad scope of subjects covered.

This discerning action on the part of the farmers in Culpeper County is refreshing evidence that American farmers have their guard up against Secretary of Agriculture Brannan's program of socialized farming. The Culpeper farmers reminded Mr. Brannan that the centralization of authority in Washington "points significantly to the pattern followed in other countries whose economic and social status is much lower than ours, and which could easily lead to socialism and then communism. This trend also results in overlapping and duplication of effort at the expense of the taxpayers." The resolution was approved by an almost unanimous vote.

In England, under the Socialist Government, a farmer must get a permit from London before he can kill a hog or a steer, even for his own use.

Editorial comment from the Thursday, September 6, issue of the Clarke Courier, Berryville, Va.:

BRANNAN HAS A NEW FARM PLAN

We have always considered farmers intelligent people. We have thought of them as smart and practical, and certainly they are for they have maintained a deeply rooted independence that neither the office worker, businessman, nor the clerk can exhibit. But there is an apparent indication that Secretary of Agriculture Charles F. Brannan doesn't have the same idea as to the farmer's intelligence.

Defeated in the passage of his now well-known infamous Brannan's farm plan, the Secretary has come up with another one, and like its predecessor, it is a dilly. He seeks to obtain the endorsement of farmers on a direct payment plan to boost consumption at market prices, and the difference between the prices and adequate returns to the farmer to be met by the taxpayers of which the farmers are many.

Secretary Brannan urges the strengthening of the farm family by strengthening the family farm through self-reliance. The county committee would advise farmers on family life, hobbies, recreation, and sort of take over the job as the head of the farm family, with the result that the family would run the family farm and the Department of Agriculture would run the family. How dumb can you get?

This is all contained in a proposal which was brought out some time ago in a booklet which has only confused the farmers by its vague and difficult Government prose. Clarke County farmers have received these booklets, but it is highly doubtful if many of them have read them, and if they have, it is just as doubtful if any farmer understands what he has read. The farmer is expected to read this report, digest it and then approve or disapprove it. A typical passage reads:

"It seems more desirable to give more attention to development of standards for comparing family farms with regard to (a) economic efficiency in farm production and (b) the levels of living they provide for farm families. In the case of economic efficiency, criteria need to be developed for comparing family farms of different sizes and types in various areas and for comparing family farms with large-scale operations to determine the competitive position of farming units of different sizes. The results of such studies would indicate how the position of family farms may be strengthened. Development of production and income budgets from experience of family farms in different areas will be helpful to public and private credit agencies in their lending operations."

The booklet is filled with drivel such as this, tending to confuse and perplex those who read it. Further, it is Brannan's first step to get the farmers aboard the presidential special in 1952 for Truman.

But as we wrote up above, we consider farmers intelligent people and they value their independence and liberties too much to allow such regimentation as Brannan proposes.

Editorial comment from the Halifax County (Va.) Record-Advertiser:

NO HAND-OUT, SAY FARMERS

We think that it would have done both Houses of Congress a lot of good to have been present at the meeting last Thursday night of Halifax County farmers presided over by J. H. Austin, chairman of the PMA. The sentiments expressed were so clear cut and strong that it would have stiffened the backbone of many a wavering Congressman and convinced them all, we think, that the farmers at least in the United States want to do something about the haphazard, loose spending ways of our present Government.

The farmers took in their stride the fact that they are getting a smaller share of the national income than they did 4 years ago. They perfectly understood that farm income has decreased 12 percent, while nonfarm income has increased 12 percent. They understand that a farm family has to get along on about one-half of what a nonfarm family gets. What was the most significant thing in the whole matter was the attitude that practically everyone present took—that present conditions in farming cannot be cured by Government subsidies. In fact, the farmers present looked askance on subsidies for anyone. Over and over again they stressed the fact that unless our Government got its

house in order and began to run itself on a pay-as-you-go plan, this country is headed for ruin.

A long time ago we heard Senator Burton K. Wheeler make a speech in Virginia. Senator Wheeler praised the efforts of Senator BYRD to curb Federal spending and balance the budget. If we remember correctly he said: "A nation can no more live by spending more than it takes in than an individual. Both will go bankrupt, and it will be necessary then for both to have a receiver. What is a receiver for a bankrupt nation other than a dictator?"

The administration has not sold its program of socialism to the farmers, at least of this country. The farmers of this country are more for national interest than they are for selfish interests for farmers as a class. If Mr. Brannan could have heard the reception given his plan by the farmers of Halifax County, multiplied by the feeling that must exist whenever a group of citizens interested in their Government gather, he would at once abandon any idea of embarking on a wild orgy of spending. The farmers of Halifax County don't want that, and what the farmers want is usually what Halifax County wants.

The Gap Between Congress and Main Street

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. BENTON. Mr. President, yesterday there was published in the New York Times magazine section an article by the distinguished and eloquent senior Senator from Illinois [Mr. DOUGLAS] entitled "The Gap Between Congress and Main Street."

Every time I return home to Connecticut—and I must have averaged a trip a week throughout 1951—I am reminded of this gap between Congress and Main Street, and it is often a wide one, at least temporarily.

I ask unanimous consent that the article by the Senator from Illinois be printed in the Appendix of the RECORD.

Mr. President, one final thought on this article. The Senator from Illinois refers to "the marathon legislative session" and I particularly call the attention of the Senate to the many new problems and dangers to us growing from these marathon sessions. Many of the regulations under which we in Congress now operate go back to the days when legislative sessions ran only about 4 months a year. For instance, the allowance given a Senator for railroad fare back and forth to his State only covers one such round trip per year. That regulation manifestly antedates the customary length of the session in recent years, which has spread out to something like 10 months per year. These marathon sessions which have become the regular sessions are a further, most urgent reason, in my judgment, for legislative recommendations for the reform of the Congress; such recommendations are now under consideration by the Committee on Expenditures in the Executive Departments.

I am sure the Senators will agree with Senator DOUGLAS' comment that "all of us are defective human instruments and Senators and Congressmen are no exception." I cite this as a provocative quotation which I hope will persuade my colleagues that this article contains many candid and penetrating observations which make it eminently worth thoughtful reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GAP BETWEEN CONGRESS AND MAIN STREET—SENATOR DOUGLAS POINTS TO A DANGER THAT IS CREATED BY THE MARATHON LEGISLATIVE SESSIONS

(By Hon. PAUL H. DOUGLAS, of Illinois)

WASHINGTON.—In a democratic government there is constant need for a mutual exchange of information and opinion between the people and their elected representatives. Both elements in this exchange are equally important. The elected representatives should make clear to the citizens what the facts about the issues of the day actually are and the reasons why they favor a given course of action. The voters and the citizens should in a reciprocal manner let their representatives know what they think should or should not be done. Out of this intercommunication, if properly conducted, comes a relative consensus of opinion. The democracy makes a decision but preserves its unity in the process and moves on to its next set of choices.

There is a fairly widespread feeling through the country that Congress in many respects has lost the necessary touch with the people and this interconnection has broken down.

There is some truth to the accusation, but there are mitigating circumstances. Most Congressmen, as a group, make prodigious efforts to keep in touch with the home folks. They and their staffs comb local papers, are receiving a constant stream of constituents and are always alert for every scrap of news from the grassroots.

The fact remains, however, that life in Washington tends to be inbred. It is an artificial city where public officials see more of each other than of a more representative cross section of public opinion. Furthermore, the impact of groups who can afford to maintain representation in the capital—as well as the immediate presence of special pleaders within the Government—often confuses or distorts the picture of the country as seen from Capitol Hill. This accounts for many of the occasions when it appears that there is a lag or contradiction between popular thinking and congressional action on important issues.

The fault for this sort of Washington provincialism lies less with the individual Congressman than with the legislative system itself as it has developed in recent times.

All of us are defective human instruments and Congressmen and Senators are no exception. Some may even be considered out of touch with the country because they see a little more clearly than the multitude what the real interests of the Nation and the world actually are and are more concerned about the future than about the passing moment.

But to the degree to which we are "out of touch," it is, I believe, due to the terrific pressure of work under which we labor and to the fact that we are tied up in Washington for such protracted periods of time. For the best way to keep in touch with one's constituents is to mix with them on their own ground, to meet them face to face, and to exchange opinions directly, as do good neighbors.

Up until recently, this process of mutual interaction took place normally and nat-

urally. Congress convened on March 4 and adjourned within 4 months, by the Fourth of July. The Congressmen and Senators then, with some exceptions, went home, lived among their neighbors and resumed their businesses and professions. In their spare time, they would travel in a leisurely fashion over their State or district, making speeches to whoever would listen to them, but also talking privately with people in restaurants, drug stores, and on the street. It is true that all too frequently the returning representatives talked with a too restricted social group and that they did not get in touch adequately with the manual workers who customarily lived "on the other side of the railway tracks." But such a failure was due more to a defect in the sympathies and imagination of the representatives than to any lack of opportunity. And in the crowded districts of the great cities, the Congressmen kept in touch with the humble as well as with the powerful.

It is true that some Senators and Congressmen in supposedly safe districts would fall subject to the attractions of Washington and the East and seldom return home. The story is told, for example, of a celebrated Senator X from one of the Mountain States who, after staying away for years, returned one day to his native city. A small boy spied him on the street and rushing to his father shouted, "Father, I have just seen Senator X." To which the father is alleged to have replied, "Son, you must be mistaken. Senator X is too big a man to visit his home State."

But only nationally known figures from "safe" districts could get by with such absenteeism. In general, the voters tacitly and indeed properly required their representatives to return for consultation upon penalty of defeat. Statesmen who acquired a bad case of "Potomac fever" (which causes a man to swell without growing) were commonly turned out to grass. Generally only those who kept in close contact with their constituents survived.

But this informal give-and-take has largely been swept away in recent years by the prolonged sessions of Congress. In 1949, for example, Congress was continuously in session from January 3 to October 19, while in 1950, though we recessed on September 23, we reconvened on November 27. This is typical of what has been happening throughout the last 15 years. The result is that the job of Congressman or Senator has become virtually a full-time one in itself.

This in effect precludes a representative from actively practicing a supplementary profession or business. It also chains him to Washington for approximately 10 months a year, leaving only 2 months out of which a brief vacation and the inspection of Government agencies, as well as a sojourn back home, must come. The result is that even with the best will in the world a Congressman or a Senator finds it hard to keep in touch personally with his constituents and to carry out the reciprocal interchange of opinions and arguments which is an essential part of the blood stream of democracy.

Our system of representative democracy puts a high premium on intelligent information on the views of the people who send us to Washington. It also attaches a great deal of importance to the public representative's ability to analyze and interpret the effect of pending legislation on the general welfare. The caterwaul of the lobbyists is most dangerous when even the most conscientious legislator has not had the opportunity to sound out the true state of affairs.

The average Senator or Congressman must vote on hundreds of measures concerning which he has no special knowledge of his own. He can often use the advice of constituents to particular advantage. By the same token he owes his constituents the responsibility of making the issues and his own

position on those issues crystal clear. Nothing is more disastrous to a democracy than a gulf between national policy and the people who must live—perhaps even die—according to that policy.

But the political future of the most hard-working representatives is put in jeopardy by enforced absences from home.

The fact that the Senators and Congressmen must be away from home for so long is resented by many of the voters, who feel that their servants should be back with them more and who tend to treat their absence as an indication that they have gone "high hat." Moreover, while the legislator is tied to Washington his rivals, both inside and outside his party, are free to roam through his district making speeches at luncheon clubs and building themselves up as friendly and solicitous tribunes of the people. The Congressmen and Senators therefore come to feel much like the chief of the Alban Tribe, whom Frazer described in his *Golden Bough* as pacing at midnight in the grove by the Lake of Nemi, waiting for the rival who would slay him with the sword and then succeed to his chieftainship.

It is small wonder, therefore, that the average representative, for both personal and general reasons, seeks quite zealously to find additional ways of keeping in touch with his constituents.

The first way is, of course, through correspondence. The volume of mail received in congressional offices has increased greatly ever since Franklin Roosevelt was elected President. In the pre-F D R. days, a Congressman's mail would commonly amount to 15 or 20 letters a day, while even a Senator from a big State would seldom receive more than a hundred. In contrast, when my wife was a Congresswoman from Illinois from 1945 to 1947, she would customarily get from 200 to 300 communications a day and today, as a Senator from the same State, I receive around 1,200. This I believe is fairly typical of the volume received by Senators from large industrial States. I am informed, however, that the mail of the Senators from New York is about three times as heavy as this.

This mail is at once a heavy burden and a fruitful opportunity. The physical labor of handling it promptly is great and makes the secretarial staffs on the Hill the most overburdened of Government employees. The volume is indeed so heavy that most of the letters on legislative issues have to be answered with form letters. Along with others, I try to make my replies informative both about the facts and as to what my position is and why. About 300 of the daily letters receive personal replies from me which I try to make as individualized as possible.

On the whole, one's correspondence is a valuable source of information as to what people are thinking. There are, however, certain inherent biases in its composition of which a representative is always aware. The first is that the "against" letters on matters of general policy always tend to overrepresent that section of opinion. It is curious but nevertheless true that men and women seem to be more ardent in opposition than in advocacy.

A second qualification is that letters come from the more articulate sections of the community, which have both the leisure and the means to write. This means that wage-earners and farmers tend to be underrepresented in the mail and the professional and business groups overrepresented. The third caution which must be followed in analyzing one's mail is that part of it is dictated by pressure groups. This can commonly be detected by the use of stereotyped phrases which monotonously recur. While such mail should not be disregarded, its importance as a free expression of opinion should certainly be discounted.

If letters are then the chief means by which voters communicate to their Representatives, how do the latter try to keep in touch with the voters? The first method is, of course, through replies to one's correspondents, and this I have already discussed.

Nearly every Congressman and Senator, moreover, sends out a periodic newsletter both to friends and to the newspapers of his district to let them know what he is doing and thinking. Most of the Congressmen from the nonurban districts as well as the Senators also make periodic radio broadcasts back to their home districts. Both the House and the Senate are equipped with radio recording rooms where one can cut a record which can then be reproduced in quantity and shipped out to the local radio stations to be played over the air by transcription. The average cost for such a record is approximately \$3, so that a five-station program will cost \$15 and a ten-station program approximately \$30. The stations will play these records in between election times without charge as a public service feature, so that a Congressman can, therefore, get a reasonable radio coverage inside his district for \$300 a year and a Senator for perhaps \$750.

Ex-Senator Arthur Capper, of Kansas, was probably the most effective in his radio talks of any Senator. Through field interviews conducted by the circulation and advertising staffs of his farm papers he knew each week what the people of Kansas were chiefly concerned about and the directions in which they were leaning. With this information at his command he was then able to go to the radio and speak on the condition of the Kansas voters. There are few or none of us today, however, who have the facilities to gather similar information.

Finally there are the trips back home. These, if they can be managed, are the best of all. But while these are easily possible for the Representatives who come from within a radius of 250 miles around Washington, they are almost impossible for those who hail from the Pacific coast and the Mountain States. While the airplane has distinctly lengthened our tether, we of the Middle West still find such trips difficult. In the first place, each trip costs around \$125.

In the second place, bitter experience has taught us that no matter how quiet the legislative schedule may seem, if we return home during the week, a storm is almost certain to blow up and crucial roll calls will be held. Then if we are absent the same constituents who customarily demand our presence as proof that we have not contracted "Potomac fever" will damn us out vehemently for neglecting our posts. Moreover, if a Representative cancels such an engagement at the last minute in order to vote, then the organization before which he was to appear is likely to become his enemy for life. As the saying goes, in such matters "One can't win."

The result is that during sessions it is only safe to make engagement for week ends. I, for example, try to make two such trips back home every month. These are very crowded days and I always return to Washington with the unhappy feeling that while I have talked with my constituents about what I think, I have not been able adequately to find out what they think.

The wise Senator and Congressman will, however, devote at least one month of the two which are left to traveling among his constituents. I try to lay out a schedule some time in advance for this trip and each year try to cover about half the State. This is the most pleasant part of the year. Traveling over the roads and mixing with people are a sure, if temporary, cure for the "butterfly stomach" which is the characteristic of Washington. Like Anteus of old, one feels

the stronger for having touched once more the reality of the good earth.

Except during the 6 months prior to an election, a Senator or Congressman can generally speak at nonpartisan or citizen gatherings and meet with members of the opposing political party as well as with those of his own. Such meetings soften the asperities of the political campaigns which follow, and do much to prevent party strife from becoming too bitter.

In order to widen still further the scope of such contacts, a friend has allowed me to fit up his station wagon for sound and on my tour hold a large number of meetings out of doors in courthouse squares, on the main streets of towns, and at factory gates as shifts start and end. I have been criticized rather strongly for this on the ground that it is said to be undignified for a United States Senator to seek out crowds.

I have never been greatly worried by this criticism, however, for it seems to me that the job of explaining and discussing the issues of the day is so important that one should seek out the people in every possible way. One of my most pleasant experiences nearly every fall is speaking at the noon hour to intelligent and skeptical crowds at the Western Electric plant, where the questioning is always keen and the verbal give-and-take spirited. The engineers and office workers there are always eager for economy and alert on foreign policy. Perhaps I do more speaking than is necessary or even desirable, but I take some pride in the fact that last year I made a total of over 500 speeches in well over a hundred towns in Illinois. And I tried to do a lot of listening too.

I hope it is not immodest to add that a heavy price is exacted for all this. The heaviest is the small amount of time which it leaves for a normal life with one's family. There are numerous Senators besides myself who are not able to take vacations with their families. One has, indeed, the constant doubt whether the whole struggle is worth such deprivation and whether it would not be far better to get out of politics and be able to live a normal life with those one loves. Another deprivation is the lessened amount of reading we can do. I try to read approximately two books a week, divided fairly evenly between current events and the great, glowing classics which live for all time. But I find this pace sometimes difficult to maintain and I must confess that I read far too many newspapers and periodicals which chronicle only the passing moment.

It is similarly difficult to save time for contemplation and to mark out the moments where, in James Martineau's words, "the arc of our lives meets the tangent of eternity." We frequently fail, therefore, to make contact with the eternal as well as with the transient.

There are basic factors built into our present Federal system which influence the extent to which Congress can truly keep in touch with the temper of the country as a whole. In the Senate a small State like Nevada has a voice equal to that of New York; rural-dominated State legislatures have frequently refused to reapportion congressional districts in accordance with changes in population. As a result opinions of city dwellers are minimized and the opinions of those who live in the country and small towns are maximized.

But the most immediate need for improvement, as I see it, is so to arrange the business of Congress as to let all of us have more time with our constituents and for study and reflection.

There are two suggestions which I should like to offer in this direction. The first is that the leadership in Congress should so arrange the legislative schedule that definite and important bills be brought forward for action on the floor during the first 3 months

of the year instead of being postponed until the middle or end of the session. While we are busy in our offices and in committee during the early months of the year there has tended to be a legislative vacuum on the floor. Failure to act in the early months prolongs the session and hence makes it more difficult to consult with the voters. More legislative action at the very outset should shorten the session and make it more possible for us to get back home.

A second improvement, in my judgment, would be for the Senate to adopt a rule of germaneness in debate. We are continually being delayed and interrupted as we are considering a bill by long speeches on an infinite variety of irrelevant subjects. This holds us back and greatly slows up proceedings. It would greatly expedite business if discussions were confined to the bill under consideration. This would shorten the session and the Senate could then set aside, as does the House, a periodic 5-o'clock hour, when Members might address the Senate on any subject.

This would permit colleagues who were not particularly interested in the speech of the Senator in question to return to their offices to get some work done while still retaining the Senate as a useful sounding board for the discussions of topics which are not immediately before the Senate for action. But whether or not these suggestions are the best that could be adopted, some improvement is needed to reestablish the intercommunication between electors and the elected which is so necessary for a democracy.

And so we representatives of the people struggle along, doing our job incompletely and making many errors along the way. But at times to nearly all of us comes the consciousness that we are perhaps part of the divine shuttle which, as it moves back and forth, helps to weave the texture of democracy, and we pray that in spite of our individual faults the pattern which we help to weave may be noble and worthy. In the words of Browning's Rabbi Ben Ezra:

"So, take and use thy work:
Amend what flaws may lurk,
What strain o' the stuff,
What warpings past the aim"

Killing the Goose

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. WIER. Mr. Speaker, under leave to extend my remarks I wish to include in the Record an editorial in this morning's Washington Post, entitled "Killing the Goose."

The editorial is as follows:

KILLING THE GOOSE

Sound economy embraces the conservation and cultivation of national resources. In the light of this standard, the recent action of the House in slashing the appropriation request of the National Science Foundation must be viewed as a piece of penny-wise foolishness. Congress established the foundation last year and authorized it to spend \$15,000,000 for the purpose of stimulating research in basic science and giving educational opportunities and training to some 2,000 young scientists. Organized under the direction of Dr. Alan T. Waterman, the foundation asked for \$14,000,000. The House cut

this by 98 percent, granting only \$300,000 and in effect nullifying the entire authorized program. This pittance precludes research and training alike, leaving the agency without any real function. This is not economy; it is wreckage—the wreckage of a program vital to national welfare and national defense.

In a letter urging the members of the Senate Appropriations Committee to repair the error of the House, Dr. Lyle B. Borst, chairman of the Federation of American Scientists, pointed out that "we run the risk of greatly distorting and weakening our entire research effort if we do not lay special emphasis on the training of new investigators and the development of new fundamental knowledge." American inventiveness has been strongest in the realm of applied science, but to a large extent American scientists have relied upon their European colleagues for basic research. That reliance is no longer feasible. And at a time when scientific supremacy is the cornerstone of military strength any neglect of this country's scientific potentialities is rank profligacy. Every consideration of national security will support the Senate in restoring the funds requested by the National Science Foundation—and in insisting upon the restoration when the appropriations bill goes to conference.

Separation of Air-Mail Pay From Subsidy

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, September 17, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two very interesting editorials bearing on the pending legislation, Senate bill 436, one entitled "The Passenger in the Baggage Compartment," published in the Baltimore Sun of September 16, 1951, and the other entitled "Air Mail and Subsidies," published in the Washington Post of September 11, 1951, which I ask to have printed in the Appendix of the Record.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Baltimore Sun of September 16, 1951]

THE PASSENGER IN THE BAGGAGE COMPARTMENT

A young lady boards a trans-Atlantic plane bound from New York to Paris. She holds the stub of a ticket for which she paid \$394.60 one way. Settling back in the comfortable seat, she expects her money's worth. And she gets it. There's good food, champagne on some flights and perhaps even a sample bottle of Parisian perfume.

Riding beneath the young lady is another passenger also bound for Paris. But this passenger rides in a dark cavernous section of the plane, jostled to and fro by other passengers. No comfort, no champagne, and no perfume. And why should there be? After all this passenger is only a humble sack of mail. But there's nothing humble about its fare, \$1,578. And who foots the bill? Uncle Sam.

In other words, the way the airlines figure it passengers go to Europe for about 70 cents

a ton-mile. But letter mail travels the same route at a cost to the Government of \$2.40 per ton-mile.

The Post Office Department is currently running a larger deficit on foreign air mail (\$50,900,000) than on domestic (\$35,500,000). One of the reasons why the international deficit is so large is that at present the cost of hauling international air mail is not based on actual transportation costs but is part of a conglomerate fee paid out by the Post Office Department to the airlines to cover both mail pay and subsidy.

Since VJ-day (according to a recent Comptroller General's report) the Post Office Department has paid the mail-carrying airlines a total of one-half billion dollars. How much of this has been subsidy?

The Chairman of the Civil Aeronautics Board in a conservative estimate places the figure between \$150,000,000 and \$200,000,000. The vagueness of this estimate by an informed public official is a rough indication of the taxpayer's total ignorance of what is being done with his "air-mail dollar." Clearly the time has come for a clean separation between what is subsidy and what is pay for carrying the mails.

A partial remedy is now under consideration by a Senate committee. This is the Johnson bill, S. 436. Under this bill as amended, the Federal Government would not be relieved of the subsidy burden. But at least the Post Office would be relieved of paying mail pay and subsidy in one lump fee. Under the bill subsidy would be separately determined and paid separately by the Civil Aeronautics Board. Then at least the taxpayer might be able to see what's what.

[From the Washington Post of September 11, 1951]

AIR MAIL AND SUBSIDIES

While Congress is voting on various proposals to raise postal rates, the Senate has a chance to strike a real blow for reduction of the postal deficit. That is to pass, without watering, the Johnson bill to separate sums paid to the airlines for carrying air mail from the sums paid them in governmental subsidy. To be sure, S. 436, as amended, would not relieve the Government of the burden of airline subsidies. But it would remove this millstone from the neck of the Post Office Department, which has been paying a conglomerate fee for mail pay and subsidy. Under the bill, subsidies would be determined separately from mail rates and would be paid separately by the Civil Aeronautics Board.

The Senate bill is not ideal, even in the determination of domestic mail rates. For example, it contains a good deal of loose language, such as the provision that mail rates "shall be based upon" (instead of "shall not exceed") cost plus air return. But the bill does give the CAB leeway to modify rates and set standards for compensation without further legislation. It also provides that no new certificates for carrying the mail shall be issued, nor any extensions of present service approved, without the sanction of the Postmaster General. Although the standards for separate subsidy determination are vague, especially in the national defense feature, the bill does provide that the existence of an airline certificate shall not be deemed conclusive justification for subsidy. That should give the CAB a weapon in insisting upon efficient management.

Where the bill falls down, rather badly in our opinion, is in setting up a dual standard for international carriers which completely ignores the cost factor in mail rates. It sets as a floor the amounts paid to foreign carriers for handling the mail, and as a ceiling the Universal Postal Union rate of \$2.86 a ton-mile. The ceiling rate would be approximately three times the rate charged

passengers and nearly seven times that assessed freight and express. In other words, the bill would continue to hide large amounts of subsidy in the guise of mail pay. Yet the bill would authorize still further subsidies. Obviously the concept of subsidy separation has been clouded here, and the bill needs to be amended to relate international mail payments to cost.

None of these objections is a valid reason, however, to delay consideration of a move that has been batted around like a tennis ball for the last 2 years. What the Senate can do is place the principle of subsidy separation on the record and tighten up the loopholes of the present bill to identify subsidies clearly.

Know Your Waterways

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, September 13, 1951

Mr. LARCADE. Mr. Speaker, as per authority granted me to extend my remarks in the Appendix of the RECORD, I wish to include copy of an article by the Marine News of New York, N. Y., published in the Washington Post, as follows:

KNOW YOUR WATERWAYS—INTRACOASTAL WATERWAY DEVELOPMENT

During World War II, barge transportation of petroleum products along the Atlantic Intracoastal Waterway, including the Florida and Jersey canals, had they been ready, would have saved many lives and a tremendous material loss from submarine action. While hundreds of millions of dollars were being spent for steel for pipe lines and tank cars—steel badly needed in other directions, relatively fractional amounts for harbor and channel development were condemned by some as extravagance, log rolling or "pork barrel" legislation.

Much intracoastal and inland waterway development remains before these channels can yield the great benefits potential in them. National security will be greater with such additional transportation available which will be a further safeguard in case of disruption of other transportation facilities. Distribution Age said in January, "Capacity production without capacity distribution is futile." Low cost distribution is one of the unsolved problems of our economic system.

New Committee Organized to Explore Political Realignment

EXTENSION OF REMARKS OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES
Monday, September 17, 1951

Mr. SALTONSTALL. Mr. President, at the request of the Senator from South Dakota [Mr. MUNDT], I ask unanimous consent to have printed in the Appendix of the RECORD a press release issued by him entitled "Announcement of Formation of Bipartisan Committee to Explore Political Realignment."

The Senator from South Dakota states in that connection:

Due to the growing interest in proposals for finding a political formula in 1952 whereby the effective voting strength of like-minded voters in the North and South can vote for the same candidates for President and Vice President regardless of where they live geographically or how they are registered politically, I think the Senate will be interested in some developments occurring in Washington in that connection during the past week end.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

ANNOUNCEMENT OF FORMATION OF BIPARTISAN COMMITTEE TO EXPLORE POLITICAL REALINE- MENT

Following a meeting of like-minded Americans—Democrats and Republicans—from 17 States who held a 3-day series of informal and unpublicized conferences here in the Mayflower Hotel Friday, Saturday, and Sunday, the formation of a committee to explore political realignment was announced here today. The committee will be headed by co-chairmen with equal authority—a Democrat and a Republican. An executive committee was created which will complete the organization. Edward R. Burke, former Democratic Senator from Nebraska, will serve as temporary chairman of the executive committee.

A partial list of executive committee members was announced as follows:

PARTIAL LIST, EXECUTIVE COMMITTEE MEMBERS OF NEWLY ORGANIZED NATIONAL BIPARTISAN COM- MITTEE TO EXPLORE POLITICAL REALINE- MENT

Edward R. Burke, Omaha, Nebr., and Washington, D. C.: Democratic United States Senator from Nebraska 1935-41, and Member of United States House of Representatives in the Seventy-third Congress from Omaha, Nebr., district. Temporary chairman.

Donald J. Cowling, Minneapolis, Minn.: president, Carleton College, Northfield, Minn., 1909-1945; former president, Association American Colleges, member, National Republican Program Committee, 1927-40.

Charles Edison, West Orange, N. J.: Former Democratic Governor of New Jersey, Secretary of the Navy under President Franklin D. Roosevelt, past president of National Municipal League; president, Thomas A. Edison, Inc.

Horace A. Hildreth, Lewisburg, Pa.: Former Republican Governor of Maine, 1945 to 1949; now president, Bucknell College, Lewisburg, Pa.

Albert W. Hawkes, Montclair, N. J.: Former Republican member of the United States Senate, 1943-49; former president of United States Chamber of Commerce; former president, Congoleum-Nairn, Inc. (now retired).

Donald R. Richberg, Charlottesville, Va.: Executive Director, National Emergency Council under President Franklin D. Roosevelt; Chairman, NRA Board (National Recovery Act) under President Franklin D. Roosevelt; now professor of constitutional law, University of Virginia, and member, Washington, D. C., law firm of Davies, Richberg, Beebe, Busick & Richardson.

These six—three Democrats; three Republicans—will expand the executive committee to include others from both political parties, to represent additional areas of the country, economic and professional pursuits, etc. They will select the cochairmen, secretary, treasurer, and other committee officials. Headquarters of the committee is expected to be maintained in Washington, D. C.

The purpose of the Committee to Explore Political Realignment is to conduct studies and hold conferences in both the South and the North, inquiring into the practical possibilities and potentialities of the various methods by which it has been proposed to join the voting strength of like-minded vot-

ers in 1952, regardless of where they live geographically or how they are registered politically. The objective is to create an administration that will reflect the convictions of these Americans to the end that America may be preserved and world peace established; it is believed that this can be done by combining the voting strength of the people in the local voting precincts whose Senators and Representatives in Congress have been crossing party lines for many years to oppose socialistic legislation and to support measures designed to strengthen the doctrine of home rule by States and local communities as against bureaucratic tyranny operated by an all-powerful Federal Government.

It is the feeling of this group that prevailing party designations have become confusing and unrealistic; that they often operate to divide into ineffective voting blocs the votes of those in different geographic areas who agree on the basic political, economic, and social problems of our times. Differences within our two major political parties, they maintain, have frequently become more significant and divisive than the differences between the two parties as reflected in party platforms and political campaigns. When this occurs, the individual voter is frustrated and defeated in his desire to have as effective a part in directing the destiny of his own Government.

The newly formed committee will sponsor no specific candidates—either Republican or Democrat. It is more interested in developing basic American standards for party platforms and in the political procedures by which those who think alike can find a working formula for combining their voting strength to stop the encroachments of socialism and the all-inclusive centralized superstate. Committee spokesmen said its ensuing studies and activities should determine the specific methods by which the proposed combination of alliance of like-minded voters might best manifest their strength in influencing the results of the 1952 election.

Plans for formulation of the new committee have been shaping up for several weeks, but it was decided to select Constitution Day as the date for announcing its organization since strict adherence to the American constitutional concepts of limited government, individual liberty, and private ownership will be a lodestar in guiding the activities of the newly formed group.

The Whisper of America

EXTENSION OF REMARKS OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Monday, September 17, 1951

Mr. REAMS. Mr. Speaker, under unanimous consent to extend my remarks, I include an editorial from the Toledo Blade of August 23, 1951, entitled "The Whisper of America":

THE WHISPER OF AMERICA

Action of the Senate Appropriations Committee in cutting \$22,000,000 more from the Voice of America funds, which had already been cut \$30,000,000 below the administration's request by the House, indicates that the President and Congress are still at odds over the value of this propaganda weapon in the ideological struggle with the Soviet Union.

It would be interesting to know on what grounds the Senate committee, meeting in executive session, based its heavy reduction.

Do the Senators know of any specific activities of the Voice of America program which could be eliminated without affecting its usefulness? Can they cite any instances of wasted money? Or do they just feel that the whole program is of doubtful value and for that reason should be held down to a minimum scale?

If their policy of curtailment is based on this last reason, it must be admitted that it is extremely difficult to measure the results of any propaganda campaign waged by air in hostile territory. But surely Senators who talk more than any other species of homo sapiens, cannot discount the effectiveness of words on that account. If they can be as effective in political campaigns as they have often proved, why shouldn't they prove extremely useful in the sort of ideological warfare in which we are now engaged?

The men who have been directing this phase of our propaganda campaign think that it has been successful, though they have no way of telling for sure and though they naturally have a personal interest in the matter. So do the Russians, whose only interest is bound to be the opposite of ours and who have done their best to jam all broadcasts directed behind the iron curtain and who have countered with a similar program of their own.

Under these circumstances it is hard to figure out why Congress, whose members can hardly be experts in this field of mass communication, should overrule the judgment of the men who are. This struggle between democracy and communism for men's minds could turn out to be the decisive phrase of the conflict between the United States and the Soviet Union. And why should the Voice of America be reduced to a whisper while it rages?

Eisenhower and European Union

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Rev. Edward A. Conway, appearing in the September 15 issue of America, national Catholic weekly, entitled "Eisenhower and European Union":

EISENHOWER AND EUROPEAN UNION

(By Edward A. Conway)

Gen. Dwight D. Eisenhower, Supreme Commander of the North Atlantic Treaty Army, made two statements early in July which should be required reading for the foreign, defense, and finance ministers of the 12 North Atlantic Treaty nations. Those gentlemen of the North Atlantic Council will meet for a week in Ottawa beginning September 15—the Russians at San Francisco permitting—to prepare for their regular annual conference at Rome in late October. The successful defense of the west will depend on the decisions made at those two meetings. The ideas of the man to whom that defense has been entrusted on what now urgently needs to be done should be welcomed and carefully weighed at both Ottawa and Rome.

Take, for example, this passage from the general's address to the English Speaking Union at London, July 3:

"It would be difficult to overstate the benefits, in these years of stress and tension, that

would accrue to NATO if the free nations of Europe were truly a unit."

Though the general proceeded to deplore "the web of customs barriers interlaced with bilateral agreements, multilateral cartels, local shortages, economic monstrosities, and patchwork territorial fences," it quickly became clear that he was not urging mere economic integration. The unity so necessary for security, he went on to say, is political as well:

"The establishment of a workable European federation would go far to create confidence among people everywhere that Europe was doing its full and vital share in giving this cooperation."

That might be taken as nothing more than benevolent encouragement of European federation as a desirable, however distant, objective, were it not for the intriguingly worded paragraph that followed:

"Any soldier contemplating this problem would be moved to express an opinion that it cannot be attacked successfully by slow infiltration, but only by direct and decisive assault, with all available means. The project faces the deadly danger of procrastination, timid measures, slow steps, and cautious stages."

This is strongly reminiscent of what Pope Pius XII said to the European Union of Federalists 3 years ago:

"If it is intended that this union shall really achieve its purpose, if it is desired to make it serve to advantage the cause of economic and political peace between the continents, it is high time it were established. Some are even asking themselves whether it is not already too late."

During consultations with visiting members of the Senate Foreign Relations Committee July 9, General Eisenhower made it clear that he considers federation very relevant to his own immediate defense problems:

"Personally, I am very hopeful that many of our problems would disappear if this whole area of Western Europe were one federal union. I believe it so strongly that I do not believe that real security is going to be felt in the United States, in the British Empire, and other nations of the globe until that comes about."

This statement was set in a context expressing a sense of driving urgency:

"The faster they [Western Europeans] regain their confidence, the faster they will do the job of defending themselves. In my opinion, the one thing that can break the United States and give us nothing in return is to drag this thing out. We must go to the limit of our productive capacity and of the power of Europe to absorb our military assistance, and get it done now."

Two weeks after General Eisenhower put himself on record in favor of the earliest possible European federation, I had a chance to observe the reactions of both Europeans and Americans. Sir Alfred Zimmern of Great Britain, former director of the Geneva School of International Studies, delivered a powerful address on European unity at the Colgate Conference on American Foreign Policy. Disclosing that he had abandoned his opposition to European union since the United States had finally and definitely committed itself to European defense, Sir Alfred discussed the "experiment of European federation which will determine the character of the atomic age":

"Will it mark the inauguration of the rule of law in the world? Or will it usher in a dark epoch of perpetual fear? The issue lies with us Europeans: for you Americans, insofar as it concerns you, have already made up your minds. Are we not justified in regarding General Eisenhower's magnificent speech on Independence day (it was given on the eve thereof)—I had almost said Interdependence day—as expressing your own sentiments?"

But was Sir Alfred justified in saying Americans had already made up their minds in favor of European federation? Formal addresses by two top State Department spokesmen at the same conference moved me to wonder a bit. At the closing session of the conference Philip C. Jessup, United States Ambassador at Large, found time in an hour-long discourse to devote this one sentence to Eisenhower's magnificent speech. "For such European unity," he said, "General Eisenhower made a dramatic plea in London on July 3." The luncheon address on the day Sir Alfred was to speak in the evening was delivered by Thomas D. Cabot, Special Assistant to the Secretary of State for International Security Affairs. Mr. Cabot, according to the State Department Bulletin, is directly responsible for work in connection with the United States participation in both the mutual defense assistance program and the North Atlantic Treaty Organization. In his discussion of implementing the Atlantic Pact, Mr. Cabot delivered himself of this eminently correct but excruciatingly cautious comment:

"It is perhaps a recognition of this difficulty [that 'neither the North Atlantic Council nor any of its subsidiary bodies possess the power to make binding decisions, and agreements can be reached only through the slow process of negotiating unanimity among the members'] which has recently prompted a renewed interest in the problem of European unity both here and abroad. On this point, I wish to say only that the United States Government has constantly supported all practicable approaches to the achievement of closer European integration and will continue to do so. At the same time, it would be a mistake to believe that this problem can be easily solved or that European unity, even if achieved, would be a panacea for all ills."

Mr. Cabot has, I suspect, one of the old and perhaps envious hands in the Department to thank for putting him in the position of "cooling off" the general, with whom his job demands that he have nothing but the very best relations. It is quite evident that the word among the Department's speech-writers, even after General Eisenhower's eloquent appeal for prompt federation, remains as it long has been: "Support it but don't push it."

The fact seems to be that the general's personal experiences in Europe have put him far in advance of the State Department theorists in knowledge of the basic difficulties which still stand in the way of adequate European rearmament, and especially of the grievous shortcoming of NATO as an operating organization. Diplomatically, yet pointedly, the Supreme Commander alluded to the latter at London, in a passage which also indicates one of his main reasons for wanting early European federation.

"We, the peoples of the British Commonwealth and of the United States, have profited by unity at home. If, with our moral and material assistance, the free European nations could attain a similar integration, our friends would be strengthened, our own economies improved and the laborious NATO machinery of mutual defense vastly simplified."

That was just 2 months after drastic revision of the NATO machinery was announced from London by Charles M. Spofford, deputy United States representative for NATO, in order to simplify and make more effective the executive organization of NATO. The implication is obvious that General Eisenhower is baffled by the number of his bosses. If a European federation were set up they could be reduced to three, representing the federation, the British Commonwealth, and the United States. No wonder he called for a direct and decisive assault, with every available means against continuing European disunity. No wonder

he warned against procrastination, timid measures, slow steps, and cautious stages.

By direct and decisive assault, however, the general does not seem to mean the so-called constitutional approach to federation, such as is embodied in the demands of European federalists like Altiero Spinelli for the immediate convocation of a European constituent assembly. His approach might be termed "semifunctionalist" in the sense that he accepts the necessity of working toward federation through cooperative action on concrete problems. His choice of the specific field in which to start toward federation clearly indicates, however, that he does not hold with Britain's Herbert Morrison that the nations must go no further than intergovernmental cooperation. General Eisenhower wants to move toward federation through the development of a European army. He is giving warm and open encouragement to the so-called Pleven plan, from which the British shied away because it is more federalist than functional. When the French Government proposed the plan last October 24 it frankly declared that the organization of a European army is vital principally because of the political solutions it implies, since the creation of such an army would necessarily further European unity. The general, by his encouragement, shows a willingness to accept that implication. What is more, he welcomes it. In the conversations with the visiting Senators referred to above, he said:

"I realize that a lot of my professional associates are going to think that I am completely crazy, but I will tell you that joining Europe together is the key to the whole thing. And if you can do it with a European army, I am ready to put a lot of work in it."

That, in the colloquial, common-sense language for which he is famous, is proof that our soldier-statesman has grasped the real significance of the Pleven plan. It is more than a device, however important, for incorporating the needed German forces into the European defense scheme. As the French representative, M. Hervé Alphand, said at the conclusion of the Paris Conference on a European army July 24:

"The delegates (of France, West Germany, Italy, Belgium, and Luxembourg) believe that this merger, under European political, military, and financial institutions, which will be created simultaneously with, or after, the Schuman plan (for the merging of European steel and coal industries) would constitute an extremely important step in the political and military realm along the road to the achievement of European federation."

The delegates might have added that the step would be just as important in the economic realm, demanding, as it does, economic integration far beyond what ECA has been able to bring about.

The Pleven plan is the military twin of the Schuman plan. Indeed, they might be described as Siamese twins, since they are joined by several common supervisory bodies, and notably by the same European Parliamentary Assembly. This democratic body would supervise Schuman plan operations, and also control the administrative acts of the European Defense Authority.

The experts who submitted their agreed recommendations on a European army were immediately directed to write a draft treaty. So many unresolved problems remain, however, such as the size and command of the German units and the methods of financing, that it is doubtful whether a final draft will be ready for discussion even in Rome, unless negotiations are speeded up. A similar situation obtains in the case of the Schuman plan. The disturbing fact is that no adequate European defense system is possible until both those plans are actually in operation.

General Eisenhower has done his part. It remains for our diplomats on the North Atlantic Council to emulate his leadership, at Ottawa especially. Is it too much to hope that they will manifest a more sympathetic understanding of what the Europeans are trying to accomplish through the Schuman and Pleven plans; the while they insist, more vigorously than they have heretofore, that the remaining differences be settled in time for conclusive action by the Council in its conference at Rome?

Questions of the Week

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 10, 1951

Mr. BENDER. Mr. Speaker, does Mr. Truman remember that the Republican Eightieth Congress was responsible for a surplus of \$9,174,000,000 in the Federal fiscal operations of the last 5 years?

When the Federal budget jumps from its present \$70,000,000,000 a year to \$100,000,000,000 who will stop inflation?

Does anyone know what the \$5,000,000,000 tacked on to the military appropriations for the coming year is really for?

International Adventures

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. REED of New York. Mr. Speaker, for the edification of the taxpayers of our country I am inserting in the CONGRESSIONAL RECORD the following report prepared by Mr. Paul O. Peters:

NEARLY ONE-FOURTH OF FEDERAL EXPENDITURES IN THE FISCAL YEAR 1951 WENT FOR INTERNATIONAL ADVENTURES AND COST OF KOREAN WAR

Total reported expenditures of the Federal Government in the fiscal year 1951 ended June 30 were \$44,632,821,908.37. This amount was previously exceeded only in the four fiscal years 1943 through 1946, when reported Federal expenditures were as follows:

1943	\$79,702,073,074
1944	\$5,572,319,510
1945	100,397,470,126
1946	63,713,798,417

Receipts of the Federal Government in fiscal 1951 were reported at \$48,142,604,532.62, the largest amount ever collected in any single fiscal year since the Republic was established, and exceeding the total revenues of the Federal Government in the 10-year period from 1930 through 1939. Thus has the cost of the Federal Government increased, with the burden falling on the American consumer and taxpayer.

Nearly one-fourth of the expenditures in fiscal 1951 were for international adventures supporting our foreign policies and the estimated cost of the United Nations war in

Korea. The table following shows the details of the expenditures:

Agency expending funds, fiscal year 1951:	Reported total expenditures fiscal year 1951
Agriculture Department..	\$17,272,866.20
Commerce Department..	306,316.71
Army Department.....	59,667,709.24
Navy Department.....	1,379,190.83
Economic Cooperation Administration.....	2,903,280,230.24
Export - Import Bank, loans and guarantees..	219,313,961.00
Federal Security Agency..	316,439.19
General Services Admin- istration.....	29,370,144.02
Korean aid.....	36,902,031.23
Mutual Defense Assist- ance.....	883,733,742.06
State Department.....	21,649,988.03

Total listed ex- penditures.....	4,183,192,462.75
Estimated cost of Ko- rean war for fiscal year 1951 (from Senate hearings).....	7,500,000,000.00

Total cost of in- ternational aid and Korean war, fiscal 1951.....	11,683,192,462.75
---	-------------------

The expenditures for international adventures and the war in Korea exceeded the expenditures of the Federal Government in any one year prior to 1941 with the exception of the fiscal years 1917, 1918, and 1919, the World War I period, when the total for 3 years was \$33,189,264,177. This amount included the loans to foreign governments.

Preserving the Historic Documents

EXTENSION OF REMARKS OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 17, 1951

Mr. MURDOCK. Mr. Speaker, I was one of a large assemblage at the Library of Congress this morning to witness the sealing against possible physical deterioration of the two great documents in our Nation's history, the Declaration of Independence and the Constitution of the United States. Perhaps I should have said, to witness our renewed efforts under the latest scientific technique to preserve these documents against the ravages of time. We all know that these priceless historical statements have been very carefully preserved for more than a hundred and fifty years, and since 1921 have been on display in the shrine on the mezzanine floor of the Library of Congress. During the 15 years that I have been a Member of Congress I have frequently taken young people who were visiting me in Washington from the far West to see these great state papers in their original form in the shrine. But it was apparent to me that something should be done for their better preservation if the latest scientific knowledge could suggest a technique. It is my understanding that the ceremony we witnessed today of the sealing of the documents is that more modern and effective technique by which we hope to

preserve these basic instruments for an indefinitely long future.

At the appropriate ceremony many notable speakers gave addresses that should be studied by all American citizens. Among these speakers were the Chief Justice of the Supreme Court and the President of the United States. Both of these high officials, as might be expected, had the appropriate thing to say linking the past with the living present. In this effort to safeguard and preserve the physical documents it seemed unusually fitting that the speakers should also mention the necessity of safeguarding the principles embodied in the statements. In these days when the world is divided between two great conflicting ideologies it seemed especially important for the speakers to contrast mere words with living ideas. Words alone will not suffice as we see demonstrated by certain other nations that have constitutions which are not adhered to and, accordingly, are not instruments of good government and human freedom.

A significant point was made that these great American charters are the parents of many similar charters around the world. And now we are reminded that the latest offspring is at this time being born in the island of Puerto Rico, where it is the hope of our Government that this island, dependent under the American flag, may have the greatest degree of self-government which may properly and wisely be furnished it. This is mentioned as the latest of the progeny but by no means is it likely to be the last. This statement is not intended to be more than a suggestion that from the writing of the fathers of our Republic many peoples and nations have gotten inspiration and hope as they attempted to realize their ideals. An historical library would be required to enumerate the progeny of these great documents. May their number increase. They will be meaningful to the rest of the world and through all future time to the degree that they are honored, revered, and observed by our America.

Illinois Newspaper Denounces Proposed Central Arizona Project

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 14, 1951

Mr. YORTY. Mr. Speaker, the Illinois State Journal, published in the mid-western State capital of Springfield, recently published an editorial which indicates the growing awareness of many States of the fantastic nature of the proposed multibillion dollar central Arizona project.

Throughout the Nation, newspapers and magazines in steadily increasing numbers are denouncing this project as an unjustified burden on all taxpayers to aid a few landowners and speculators in Arizona. Obviously not all these edi-

torials can be printed in the CONGRESSIONAL RECORD, although I wish my colleagues could see them, the better to know the facts of this case.

However, the Illinois State Journal's editorial is a commendable example.

It follows here:

Arizona, a very fine State for respiratory refugees from the humid Corn Belt, and a sight every American should see in his lifetime, is about to put across a costly irrigation project about which Illinois taxpayers should know.

Known as the central Arizona project, this costly scheme would total \$2,075,729,000 in taxes to irrigate 226,000 acres of war-boom land in the Phoenix area. That sum includes the original cost plus debt service for 75 years. Illinois taxpayers would assume \$157,534,000 of this obligation if the House should pass H. R. 1500.

Senate approval already has been given to build dams, pumps, and canals to the extent of \$1,838 an acre for the land to be reclaimed. This land would not be open the new settlers, but is already in private ownership. These private owners are in the front rank of the boondoggle's promotion.

Journal readers who are wondering what they can do to help relieve the ever-growing Federal tax load can contact their Congressmen and advise them to vote "no" on H. R. 1500. This will help prevent signing one more mortgage on the future earnings of ourselves, our children, and our grandchildren.

It is hardly good sense to curb badly needed flood-control measures in the populous Midwest and then pour money like water into the desert sands of the arid Southwest.

The Relief Chiselers Are Stealing Us Blind

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. REED of New York. Mr. Speaker, on August 8, 1951, I introduced H. R. 5076. The purpose of the bill was to permit the several States to enact legislation if they so desired permitting access to the public records of persons receiving payments under the social security public-assistance programs without thereby making the States ineligible for their share of Federal funds under the public-assistance programs.

H. R. 5076 is identical with an amendment which the other body made to a revenue bill passed by the House. A full discussion of the provisions of my bill were had by the other body and after a full debate it was passed in order to help correct the misuse of the public-assistance funds paid for by the taxpayers of the country. Inasmuch as this legislation does not meet with the approval of Mr. Oscar Ewing, the Federal Security Administrator, although it is endorsed widely throughout the country by responsible organizations and citizens' groups, my bill has been successfully bottled up in the Ways and Means Committee.

Because this legislation is so important to several of our States, and indeed to all the taxpayers of our country who

are generally alarmed at the misuse of these funds, I am inserting for the record a recent article, appearing in the Saturday Evening Post of September 8, 1951, showing why it is important that the Ways and Means Committee favorably report H. R. 5076 and give every Member of the House an opportunity to vote on this legislation.

Under leave to extend heretofore granted, I am inserting an article which appeared in the Saturday Evening Post of September 8, 1951:

THE RELIEF CHISELERS ARE STEALING US BLIND

(By Paul Molloy)

(Money deducted from your pay check goes to cheats, encourages them to avoid work—and you're not even allowed to know who they are. Here are shocking facts uncovered in Oklahoma about the corruption of aid for dependent children.)

You could feel the filth in the two-room shack without looking at it. It hit you in the nostrils. The sullen woman in her forties padded about the drafty room in a pair of man's slippers several sizes too large. In one arm she clutched a bawling infant. Two other children huddled on a rickety bed in the corner. Two more stared vacantly out a dirt-creased window. The serious, puzzled expression on their faces made them look like little old men.

The woman mumbled in a dull monotone, "My husband disappeared after the second child came."

A man's cap hung on the chair. "Is there a man living with you now?" I asked.

A moment's hesitation, then: "Yes. My boy friend's living with me. This"—she swung the baby upward—"is his baby."

Talking was difficult, like the forced conversation at a funeral. "What about the other two children?"

"They're his too."

Silence. More prodding. Silence. More questions.

And then: "My boy friend's divorced. He's got five other kids from his wife."

"In other words, this man you're living with is supporting 10 children—these 5 and 5 from his wife?"

"Well, not exactly. You see, he ain't working. He ain't feeling none too well."

This woman and her paramour are getting \$126 a month in aid for dependent children (ADC) from the State of Oklahoma. They represent just one of the hundreds of individual cases I traced down during an investigation for the Tulsa Tribune. The inquiry revealed that in an alarming number of instances State welfare, financed directly by the taxpayer, is making Oklahoma a paradise for parasites. The case histories disclose countless examples of indolence and sloth, show clearly how the taxpayer supports men and women who not only do not work but who are breeding a society of illegitimates besides.

These, of course, are aside from the legitimate cases the ADC law was meant to serve—cases where the parents were dead or seriously ill, where deserving children would have been left to suffer without aid. But in case after case the investigation showed that the father is a chiseler and the mother a drone. Caught in between is the citizen, paying the bills for lazy, apathetic ne'er-do-wells satisfied to eat the bread of idleness.

A similar situation exists in several other States, although Oklahoma presently has the unsavory distinction of having more children on relief rolls than any other State. More than 55,000 children are receiving aid each month; this represents about 8 percent of all children in the State, and is more than twice the national average. The per-capita public-welfare bill in Oklahoma is the

second highest in the Nation; only Colorado spends more per inhabitant than does this oil-rich section of the Southwest. During the last fiscal year it cost each Oklahoman \$33.12 to maintain public-assistance expenditures, and out of every welfare dollar spent, 18 cents went toward ADC.

ADC obligations during this period totaled \$14,326,599 for 22,000 families; of this amount, \$4,968,459 was State money and the remainder was Federal. The Federal Government makes contributions to the States for public assistance; the Federal and State Governments combine to give the ADC parent \$27 a month and an additional \$27 for the first child. From then on, it is \$18 for each child, up to a monthly maximum of \$150. For the first child, the Federal grant is \$16.50 against the State's \$10.50, and \$12 against the State's \$6 for each additional child. The State and Federal obligations for ADC in Oklahoma are now running at more than \$1,500,000 a month. And a bill is pending, as of this writing, to increase the Federal share of welfare aid to the States by \$140,000,000 a year.

Getting this \$27-plus-\$27-plus-\$18-plus-\$18-plus-\$18, and so on, is no problem for the recipient. She just has to ask for it and show that she is in need. Whether the children are legitimate or illegitimate makes no difference. Whether she is married or divorced or separated or unmarried makes no difference. If there is no husband or father on hand to support the children or if the husband or father cannot support them, through illness, for example, she is entitled to ADC. If the supporting parent is dead, incapacitated or absent, ADC will be granted. The number of children has no bearing on the grant, nor do the circumstances of their birth. A girl coming in with her brood from a neighboring State, however, must wait 1 year before getting her first ADC check. Husband and wife do not have to be living together, but if the man responsible for a woman's pregnancy is in town, the case worker will report this to her case investigator. Naturally, the type of lover or husband this story is concerned with rarely stays in town.

Some of this money was received, and spent, legitimately; too much of it was not. Let's look in on some of the homes where this money went—homes picked at random which I had no reason to suspect of chiseling.

What little furniture there was in the house had seen better days, but that was understandable, for here was a family receiving ADC, distributed by the State out of the 17 percent of the State sales tax earmarked for that purpose. But atop a table and occupying a place of honor in the living room was a \$250 television set. The owner also had a large cabinet radio of recent vintage. He also has five children, for whom he receives \$112 a month. This is not quite the maximum of \$126, because this man reports a few dollars income from his casual efforts at working.

I came right to the point. "Nice set you've got. What did you pay for it?"

"Thirty-five dollars. Got it from a friend." The answer came so fast it sounded rehearsed.

"Who's the friend?"

"A grocer; he took it from a customer—you know—to pay the bill."

"That was lucky. And who's the grocer?"

"Well"—hesitation was setting in now—"he's out of business. I don't know where he is."

This man doesn't work, he told me, "because I don't feel too good." But a sign in the front yard proclaims him a radio repairman and on good days he admits he makes \$4 or \$5.

THE SORRY STORY OF AN UNHAPPY MOTHER

Sometimes you can tell a lot about a house from its entrance. The door on the next

cabin home I visited rattled out a sorry story. It was little more than a huge, gaping hole surrounded by a little screen, and it was shy one hinge. Inside was pandemonium, a 38-year-old woman with four children and plenty of dirt. One spot on the wall was clean; it held a placard reading: "God bless our happy home." But the woman wasn't happy. Her ADC check had been going up and down, and her temper had shifted accordingly. She didn't know the reason for the fluctuation, although it was obvious.

Her first husband, A, died after the arrival of the first child. Then she married B, who is now in the hospital. The second child came, but while B was in the hospital, she took up with C, to whom she bore another child, her third. Not long ago, her fourth child was born, from a fourth man, D. Although county records showed nothing on C or D, I found out that D is in Tulsa, jobless, and nobody knows where C is.

This woman at least had gone through a marriage ceremony with two of the four fathers, but some ADC recipients—some of whom have been getting a free ride for 12 years—don't bother with that formality. One woman receiving \$108 a month introduced me to her four illegitimate youngsters, fathered by four different men. Not one had stayed around long enough to provide for the offspring, and this woman has been receiving State aid for 8 years.

In another neighborhood, one woman's adventures left me a little stunned. After her third child she and her husband separated and a fourth child came after an idyl with another man. Still another affair, with another man, produced a fifth child. At this stage the original couple decided to pick up where they left off. The two remained together long enough to produce four more children—by now she had borne nine children—but for the second time the husband packed and left. He's in Kansas now, and you are helping to support his children.

At another home a young mother of two, both born out of wedlock, told me she had received no word from either father. As we talked, there was a cough in the kitchen. "Who's the man?" I asked.

"My boy friend."

"Is he living here?"

"Yes, he is."

It developed that this third lover has a job and the woman herself earns \$5.40 a day when she works. To top it off, this pair is getting \$72 a month of the taxpayers' ADC money.

Another girl with five illegitimate children insisted she was not "living with" her man. "He only comes here to see me now and again," she insisted. And she's been getting State aid for 3 years.

This isn't what Oklahomans had in mind when they voted to participate in the ADC programs. Says Jenkin Lloyd Jones, blunt-spoken editor of the Tribune, who ordered my investigation: "The reason why the ADC program went sour is the secrecy that surrounds the payments. Taxpayers are not permitted to know who gets their money. The Federal Government will refuse to pay its share of the grant if the names of recipients are made public, and this is an engraved invitation to grafters. This ruling, in effect, encourages leeches to live off the wage earner because their identity is protected. Thus we have made the matter of getting relief so easy that we are creating a large class of professional paupers. As long as the records remain hidden and the citizen tapped for taxes cannot learn whether his neighbor has a hand in his pocket, laziness and promiscuity will continue profitable and attractive."

Difficult as it is to support the progeny of men who love and run away, it is doubly onerous when the irresponsible fathers are criminals to boot. One girl I interviewed

was particularly unlucky. The man responsible for her first pregnancy has been in the penitentiary since 1949. The girl wasn't able to spell his name. Her second lover, after fathering her second child, got a 5-year sentence for raping a 12-year-old girl. She shares her apartment with a girl friend, also receiving ADC, whose husband deserted her 3 years ago, leaving four children behind.

Not too long ago an Oklahoma county attorney, fed up with the abuses, subpoenaed welfare records and had 18 errant fathers arrested. Immediately the Federal authorities, pointing meaningfully to Federal grants from the National Treasury which keep the ADC going in the States, informed the welfare department that it was to resist any further attempt to subpoena the records. It is an offense, punishable by prison or fine, or both, to reveal the names of relief recipients. I could not get the lists I used from welfare officials; as a newspaperman, I was able to get them from another source.

During this month-long survey I talked with a man who hadn't worked in 3 years. He owns a 1941 truck and hopes to become a trash hauler, but he gets a \$122 monthly grant and has been on ADC for 5 years. I noticed an addition to his house and asked how much it had cost. He said \$200.

Since this man isn't working, where did he get the \$200?

The monthly ADC average payments tell an interesting story. For October 1950 the average per family was \$44.66. It rose to \$50.19 the following month, and in December it stood at \$50.23. An across-the-board increase was begun early this year, and the average now has hit the \$72.57 mark. Of all the cases I investigated, not one had requested a raise; it came as a happy surprise to them all.

One house I called at was a study in contrasts. It was decrepit and crying for a coat of paint. The young woman who unlocked the door wore jeans and a man's suit coat. The coat was unbuttoned, and she was naked beneath it.

She flashed a coy smile, motioned me to a chair, and jolted me with "Ain't you got a key of your own?"

The woman was a prostitute and obviously had mistaken me for a regular customer. When it was evident that I had no key of my own she showed no embarrassment. She explained that her three children were illegitimate, from two men. "I don't know where the first man is," she said casually. "The second fellow's here in town, but I couldn't get him to take no blood (paternity) test."

"Do you get any help from either of them?"

The woman—she was in her thirties—pulled out her gum and rolled it between her fingers. "Naw—they don't help none at all." Oklahoma does, however. She gets \$90 a month in ADC, and only she knows how much she gets from her profession.

Margaret Lamm, assistant Tulsa County attorney, sees the situation like this: "Paying women to add to the population of miserable, illegitimate children is bad charity, for it doesn't eliminate want, it compounds it. It raises new generations of twisted, subnormal people bred in the foulest environments, who are candidates for our swelling ranks of unemployables, criminals, and insane."

Mrs. Lamm has been handling such cases for years. One that escaped her was the 39-year-old chap who was still in bed when I called at 1:30 p. m., although he doesn't work nights. He doesn't work days, either.

Yes, he was in good health, he said. No, he wasn't working. Yes, he'd looked for a job a while back, but hadn't had much luck.

I asked: "Do you plan on going to work soon?"

And this was his reply, complete with giggles, "Guess I'll get around to it, but you know—my trouble is just that I'm lazy."

Perhaps I hadn't heard clearly. I repeated the question, but the answer was the same, only this time it was funnier.

"It's like I say," again the silly laugh, "I guess I'm just plain lazy."

This man gets \$52 worth of hilarity every month from ADC. He doesn't even have to leave his bed to get it. It gets to him in the mail, regularly.

The cases of rapacity and fraud are endless. In one case, the mother claimed her husband was too sick to work. She said he was 61, had three kidneys instead of two, and suffered from arthritis and pneumonia. Despite his ailments—she said he was "actually dying"—the wife was expecting her seventh child. I asked to speak to the father, but he wasn't in bed. He wasn't even at home.

Said his wife cheerfully, "He's up the road apiece, with the boys."

A father of five children in Tulsa is living with his own parents in the country. It took a half hour before his wife would admit that her husband was a drunkard. She had insisted he was "resting up" from ulcers while she claimed a \$128 ADC check every month. Even for Tulsa, a city of phenomenal wealth, those are pretty expensive ulcers.

The public-welfare department concedes there are difficulties in getting the vanishing papas to face the music. Its last official report says: "The uniform support-of-dependents law has to date had little effect in obtaining support from absent parents, since those other States which adopted similar legislation are not the States to which most of the clients from Oklahoma have gone."

But this doesn't fit in with some of the cases I checked. I talked to one woman whose son-in-law, a widower, consistently refuses to support his two children. I finally found out that the father holds a good job in Oklahoma City and the grandparent has his address—he recently invited them down for a visit. She had complained to the authorities, but nothing came of the complaint. Another mother told me tearfully that on three separate occasions she had urged a former Tulsa County attorney to bring about the prosecution of her faithless husband. She was turned away with the reply that the authorities would never get anything done if all defaulting spouses had to be hunted.

This woman tended to agree with Oklahoma City District Judge A. P. VanMeter, who has seen the problem in his court many times, and who says, "Fathers who desert their children commit a worse crime than auto stealing. Federal law-enforcement agencies are used every day to apprehend and prosecute car thieves, but they are prevented from returning deserting fathers who flee across State lines and leave their families penniless."

One of the ADC's aims is to keep families united, where possible, but I found a case where mother and daughter were so close that one was helping the other with cash, although both are on ADC. The older woman was a widow with three children, the last illegitimate. Her \$50-a-month apartment was a new one and the furniture—including a gleaming kitchen range and a giant refrigerator—had been recently purchased. Besides the three young ones, she had three grown daughters, all of whom contribute \$10 a month toward her support, and one of these daughters is on ADC herself. This is in addition to the \$90 the older woman gets from the State each month. The furniture? A present from one of the daughters.

Steve Stahl, executive vice president of the Oklahoma Public Expenditures Council, which for years has fought to have the State publicize the names of ADC mothers, says bluntly, "Oklahoma has created a welfare Frankenstein." Stahl, who is also chairman of the National Conference of State Taxpayer Associations, emphasizes that Okla-

homa spends more for public charity than for public education, and adds:

"The ADC program encourages illegitimacy and subsidizes the breaking up of homes. Relief today, without any further expansion, is being dispensed in a manner and at a cost that neither our present nor any yet devised economy can support for a protracted period of time."

Stahl was particularly incensed with the odd instance of the Tulsa schoolboy who found work in the school cafeteria during the noon hour, 3 days a week. This investigation showed he was paid 50 cents an hour. After a month, his mother abruptly ordered him to quit; she draws an ADC check and it was to be cut \$2 because her son brought home \$1.80 at the end of the month. From his earnings he had paid for his lunches, and the \$1.80 represented what he had accumulated above his lunch cost. But it represented much more than that. That \$1.80 was the seed of industry and thrift which every American boy and girl can develop, with proper training. It was something he was proud of, because he had earned and saved it. But in his home there is no incentive, because his mother forbids him to work. So he, too, may grow up to be a parasite; his mother's check might well be his passport to a life of indolence.

What is the answer? How can these people be wiped off the rolls in Oklahoma, in your State, in your county?

Representative TOM STEED, one of two Oklahoma Representatives who discussed this investigation in Congress, feels the solution is squarely up to Congress and State officials. STEED has introduced a measure that has teeth to bite into the problem. He wants a Federal law to permit Government crime-detection agencies to pick up these wandering hoboes and take them back to jurisdictions where they can be made to work for their children or stay in prison indefinitely. "The abuses have increased so rapidly in recent years," says STEED, "that they are becoming a national curse and are threatening the entire ADC program."

Mrs. Lamm feels that fathers who breed for a macabre profit, then refuse to support their children, should simply be thrown into jail for bastardy. The idea of these fathers loafing and looking at television or taking refuge out of the State while the postman pads to the door with a public baby bonus, she says, is "senseless and intolerable."

District Judge Eben L. Taylor, of Tulsa, a mild-tempered man with little respect for deserters, also is disappointed with the abuses: "There are thousands of cases where ADC works well, but these have not been brought about by the State. They result from the fact that there are many mothers who are strapped financially, but are able and willing, with ADC help, to make good homes for their children. And this is what made ADC look plausible when it began, but the scheme has broken down. There is no plan to create a pleasant home for the unhappy children; only to send money each month to a person who, in too many cases, could never qualify as a responsible guardian for anyone's welfare."

Jones suggests that women who have illegitimate children should not be permitted to draw checks on them. His argument is that the unwed baby breeder is a racketeer, and her children should be placed in an orphanage. "That's expensive," Jones admitted, "but not nearly so expensive as the present situation, in which she can actually qualify for a free living if she bears enough children. It's time sentimentality was set aside and these women charged with State vagrancy."

Armed with the suggestions for remedy listed above and after the investigation was completed, I went to see Virgil L. Stokes, director of the Oklahoma welfare department. Stokes said he doubted if the publicizing of names of welfare clients would accomplish

a great deal. Regarding the penalizing of miscreant fathers, he insisted this was the responsibility of county and local authorities, stressing that he couldn't approve of anything that would put us in the "pistol-packing business." Asked if the mothers were ever warned by case workers that their promiscuous pregnancies could lead them to some form of punishment—such as deprivation of the child or a charge of State vagrancy—Stokes replied:

"Our interest is in the child; therefore we make no effort to reform the mother. We don't rehabilitate these women because we don't consider that part of our duties." The mother doesn't have to file charges against the man; Stokes said she can get ADC whether or not she takes action against the boy friend.

"This interview," Editor Jones retorted, "illustrates how far afield we have gone in public welfare. What ADC would need, under this formula, is a crew of business-machine operators, not social-service workers. One has so many babies, one gets so much base pay. The State comes around once a year to check up on production. It's just an inventory."

On July 31, 1951, Federal Security Administrator Oscar Ewing cut the State of Indiana off from Federal welfare funds, because of Indiana's insistence on opening her welfare rolls to public inspection. Oklahoma is still eligible for her share of Federal money, but unless something is done about the situation, Oklahoma's expenditures for all kinds of assistance, within 2 years, will have amounted to more than \$150,000,000 and will probably still be climbing.

There Is Nothing New About "Yes Men"

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, the Truman administration has repeatedly shown that it tolerates only "yes men" in its councils. It has been ruthless in its reprisals against those who dissent. It has refused to seek the counsel of some of the ablest, most experienced Americans because it knew they would offer advice it did not want to hear. It has frequently denied Congress access to information or advice contrary to administration views and policies.

The most dramatic case, of course, was the dismissal of General MacArthur. But that is only one example. Consider such matters as the firing of Admiral Denfeld; suppression of the Wedemeyer report and virtual banishment of General Wedemeyer; dismissal of former Ambassador Grew from the State Department in favor of Dean Acheson; the firing of Defense Secretary Johnson, who refused to pad the military budget; failure to heed warnings of the late Senator Vandenberg regarding far-eastern policy; refusal to consult such far-eastern experts as General Chen-nault, Admiral Yarnell, General Hurley and General MacArthur himself during the crucial formative stages of the disastrous Pacific policy; the bypassing of Congress as a whole in the decision to fight in Korea; the President's

curt rejection of Senator Tarr's offer to confer on foreign policy; last week's smear attack on Democratic Senator Douglas which brought his almost hysterical outcry, and many other instances of failure to use the national resources of experience and wisdom.

Note by contrast the high favor in which the administration holds former Defense Secretary Marshall, who said during the MacArthur hearings that he would not tell a congressional committee the truth if it involved expressing views "in opposition to my Commander in Chief." Note, also, the statement of General Bradley, "I wouldn't profess that my judgment was better than the President or the administration."

There is nothing new about "yes men" in Government, or about those in authority who make it tough for any who refuse to be sycophants. And it is nothing new for such a policy to lead to disaster. Here is a narrative of events in the year 897 B. C. It is found in the Bible, in the twenty-second chapter of I Kings:

And it came to pass in the third year, that Jehoshaphat the King of Judah came down

to the King of Israel (Ahab). And the King of Israel said unto Jehoshaphat, "Wilt thou go with me to battle to Ramoth-gilead?" And Jehoshaphat said to the King of Israel, "I am as thou art, my people as thy people, my horses as thy horses."

And Jehoshaphat said unto the King of Israel, "Enquire, I pray thee, at the word of the Lord today." Then the King of Israel gathered the prophets together, about 400 (they were prophets of the groves, hirelings of Jezebel) and said unto them, "Shall I go against Ramoth-gilead to battle, or shall I forbear?" And they said, "Go up, for the Lord shall deliver it into the hand of the king. And Jehoshaphat said, "Is there not a prophet of the Lord besides, that we might enquire of him?" And the King of Israel said unto Jehoshaphat, "There is yet one man, Micalah, the son of Imlah, by whom we may enquire of the Lord; but I hate him, for he doth not prophesy good concerning me, but evil."

And Jehoshaphat said, "Let not the king say so." Then the King of Israel called an officer, and said, "Hasten thither Micalah, the son of Imlah * * *."

And the messenger that was gone to call Micalah spake unto him, saying, "Behold now, the words of the prophets declare good unto the king with one mouth, let thy word, I pray thee, be like the word of one of them, and speak that which is good." And Micalah said, "as the Lord liveth, what the Lord saith

unto me, that will I speak." So he came to the king.

And the king said unto him, "Micalah, shall we go against Ramoth-gilead to battle, or shall we forbear?" And he answered him, "Go and prosper; for the Lord shall deliver it unto the hand of the king." And the king said unto him, "How many times shall I abjure thee that thou tell me nothing but that which is true in the name of the Lord?"

And he (Micalah) said, "I saw all Israel scattered upon the hills, as sheep that have not a shepherd; and the Lord said, 'These have no master; let them return every man to his house in peace'."

And the King of Israel said unto Jehoshaphat, "Did I not tell thee that he would prophesy no good concerning me, but evil?" And the King of Israel said, "Take Micalah and carry him back unto Amon, the governor of the city, and to Joash, the king's son; and say: 'Thus saith the king, put this fellow in prison, and feed him with bread of affliction, and with water of affliction, until I come in peace'."

And Micalah said, "If thou return at all in peace, the Lord hath not spoken by me."

Mr Speaker, the sequel to all of which was that Ahab went up to battle, his forces were disastrously defeated and routed, and Ahab himself was fatally wounded. It was a heavy price to pay for listening to "yes men."
